An introduction to enclosure fire dynamics through the development of fire modeling algorithms and the application of computer-based fire modeling techniques. The objectives of the course are: to provide a basic understanding of enclosure fire dynamics with an emphasis on a system-level viewpoint (i.e., a global description of the coupling between combustion dynamics, smoke filling, vent flows and heat transfer); and to provide an introduction to the zone modeling approach. Topics covered include a review of the mathematical formulation of zone models, a discussion of numerical integration of the zone modeling equations (using MATLAB), and an introduction to zone modeling software used by professional engineers (e.g., CFAST).

Prerequisite: ENES232, ENFP300, and ENFP312.

Restriction: Must be in Engineering: Fire Protection program; and senior standing; and permission of ENGR-Fire Protection Engineering department.

ENFP426 Computational Methods in Fire Protection (3 Credits)

Introduction to computer-based fire modeling: zone modeling and Computational Fluid Dynamics (CFD); documentation of input data, validation and verification tests.

Recommended: ENFP425.

Restriction: Permission of ENGR-Fire Protection Engineering department.

ENFP429 Independent Studies (1-3 Credits)

For students who have definite plans for individual study of approved problems, or study of an advanced topic selected in conjunction with the faculty.

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

Restriction: Must be in Engineering: Fire Protection program.

Repeatable to: 6 credits if content differs.

ENFP440 Smoke Management and Fire Alarm Systems (3 Credits)

Analysis of hazard posed by smoke in buildings. Performance characteristics of smoke management systems. Review of analytical design aids. Functional analysis and design of fire detection and alerting systems. Examination and evaluation of code criteria, performance specifications and research.

Prerequisite: Must have completed with a C- or better or concurrently be enrolled in ENFP300.

Jointly offered with: ENFP627.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP440 or ENFP627.

ENFP461 Think Tank (3 Credits)

Designed to have the student apply critical thinking in both engineering and business terms through a unique combination of student-driven, competition-based, long-term, targeted learning.

Recommended: Junior standing in fire protection engineering.

ENFP464 Industrial Fire Safety (3 Credits)

Designed to introduce students to the basics of process safety with a focus on the methods and techniques that may be utilized when evaluating the existing or proposed safety protection solutions in industrial facilities. An emphasis is placed on properly identifying the hazards that are present, the risk exposure, and how best to address the risk. The foundation is laid by presenting the necessary background information on industrial processes and integrating this information with applicable fire/explosion safety science.

Prerequisite: Students must be of senior standing.

Restriction: Permission of ENGR-Fire Protection Engineering department. Also offered as: ENFP664.

Credit Only Granted for: ENFP464, ENFP489I, ENFP629I OR ENFP664.

Formerly: ENFP489I.

Additional Information: The course will be taught as a dual senior-level undergraduate course and graduate course.

ENFP465 Fire and Explosion Investigations (3 Credits)

This course covers many aspects of fire and explosion investigation and reconstruction. Information on field techniques, applicable standards, and best practices are presented with an emphasis on how fire science and fire dynamics can be applied to forensic analysis. Experiments are performed and analyzed to demonstrate the concepts.

Prerequisite: Student should have senior standing.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP489N, ENFP629N OR ENFP665.

Formerly: ENFP489N.

Additional Information: The course will be taught as a shared senior-level undergraduate course and graduate course.

ENFP467 Wildland Fires: Science and Applications (3 Credits)

Introduction to the global problem of wildland fires with an overview of the social, political and environmental issues posed as well as detailed coverage of the science, technology and applications used to predict, prevent and suppress wildland fires.

Prerequisite: ENFP312.

Restriction: Must be in Engineering: Fire Protection program; and permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP489W, ENFP629W, or ENFP667.

Formerly: ENFP489W.

ENFP489 Special Topics (3 Credits)

Selected topics of current importance to fire protection.

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

Repeatable to: 6 credits.

ENFP601 Introduction to Fire Protection Engineering (3 Credits)

The basic concepts of life safety, water-based fire protection systems, building construction, codes and standards along with tenability, fire behavior, and human behavior are introduced along with traditional and performance-based approaches for analyzing human response to fire. Students learn to analyze the egress systems and design basic water-based fire suppression systems.

Additional Information: Highly recommended to incoming graduate students to Fire Protection Engineering who have not earned a Bachelor's Degree in Fire Protection Engineering.

ENFP610 Advanced Special Hazard Suppression Systems (3 Credits)

Issues related to the suppression of fires and the design of fire suppression systems. Theoretical aspects of fire suppression and extinction are considered to provide the foundation for the practical design of different types of fire suppression systems. Focus on water-based and "clean agent" fire suppression systems, with emphasis on high challenge and special hazard applications. Systems using other agents are introduced, but are not addressed in detail.

Jointly offered with: ENFP410.

Credit Only Granted for: ENFP410, ENFP610 or ENFP653.

ENFP611 Fire Induced Flows (3 Credits)

Theoretical basis is presented for fire induced buoyancy driven flows. Plumes, ceiling jets, vent flows, compartment flows. Dimensional analysis for correlations and scale model applications. Smoke movement and combustion products.

Prerequisite: ENFP415.

ENFP613 Advanced Life Safety Analysis (3 Credits)

Fractional effective dose (FED) methods for predicting time to incapacitation and death of fires for use in fire safety engineering calculations. Physiology and toxicology of fire effluent components, decomposition chemistry of common materials, standard experimental approaches. Predictive models of material production rates. People movement characteristics related to building evacuation. Formulation and application of evacuation models. Human behavior factors affecting response of people to fire situations.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP413 or ENFP613.

ENFP619 Graduate Seminar (1-3 Credits)

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

Restriction: Must be in ENGR: MS Only-Fire Protection Engineering (Master's) program.

Repeatable to: 3 credits.

ENFP620 Fire Dynamics Laboratory (3 Credits)

Laboratory experiments are designed to illustrate fire phenomena and test theoretical models. Diffusion flames, ignition and flame spread on solids, liquid pool fires, wood crib fires, fire plumes, compartment fires.

Recommended: ENFP415.

ENFP621 Analytical Procedures of Structural Fire Protection (3 Credits)

Analysis procedures for structural components of wood, steel, concrete, composites. Structural capabilities, modifications under fire induced exposures. Calculations, computer models for predicting fire resistance ratings of structural components.

Prerequisite: ENFP312. Cross-listed with ENFP621.

Credit Only Granted for: ENFP405 or ENFP621.

ENFP625 Advanced Fire Modeling (3 Credits)

Validity, utility, reliability of current computer models. Applications of models in risk assessment, underwriting, loss prediction, hazard analysis. Development and validation of specific application models.

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

ENFP626 Computational Fire Modeling (3 Credits)

Introduction to Computational Fluid Dynamics (CFD)-based fire modeling; governing equations of turbulent reacting flows; numerical approaches to the treatment of turbulence (DNS, LES, RANS); numerical methods for partial differential equations; physical modeling of enclosure fires (turbulence, combustion, thermal radiation, pyrolysis, suppression). Development of sample programs (Matlab) and use of current CFD-based fire models (FDS).

Prerequisite: ENFP300 and ENFP312.

Restriction: Permission of ENGR-Fire Protection Engineering department.

ENFP627 Advanced Smoke Management and Fire Alarm Systems (3 Credits)

Analysis of hazard smoke. Response analysis of smoke detectors based on characteristics of detectors and properties of smoke. Performance characteristics and limitations of smoke management systems. Capabilities and limitations of analytical design aids.

Prerequisite: ENFP300.

Jointly offered with: ENFP440.

Credit Only Granted for: ENFP627 or ENFP440.

ENFP629 Selected Topics (3-6 Credits)

Current research, studies in fire protection engineering. Future trends and significant changes in research, professional areas. The professional standards process.

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

Restriction: Must be in ENGR: MS Only-Fire Protection Engineering (Master's) program.

Repeatable to: 6 credits.

ENFP630 Diffusion Flames and Burning Rate Theory (3 Credits)

Basic principles of diffusion flames for gaseous, liquid, and solid fuels. Droplet burning, B number, jet combustion, boundary layer combustion, generalized methods.

Prerequisite: ENFP312.

ENFP649 Special Problems (1-3 Credits)

Advanced topics selected by the faculty from the current literature to suit the special needs and background of students, or for individual students who have definite plans of individual study.

Restriction: Must be in ENGR: MS Only-Fire Protection Engineering (Master's) program; and permission of instructor; and permission of ENGR-Fire Protection Engineering department.

Repeatable to: 6 credits if content differs.

ENFP651 Advanced Fire Dynamics (3 Credits)

A review of the basic chemistry and physics necessary to understanding fire dynamics; and of the physics of heat transfer and turbulent fluid flow will be given. The nature and structure of premixed and diffusion flames will be presented.

Prerequisite: ENFP312.

Jointly offered with: ENFP415.

Credit Only Granted for: ENFP629A, ENFP651 or ENFP415.

Formerly: ENFP629A.

ENFP652 Fire Assessment Methods (3 Credits)

This on-line course offers a comprehensive review of experimental techniques to assess fire performance characteristics of materials, products and assemblies.

Credit Only Granted for: ENFP629B or ENFP652.

Formerly: ENFP629B.

ENFP653 Advanced Fire Suppression (3 Credits)

Issues related to the suppression of fires and the design of fire suppression systems. Theoretical aspects of fire suppression and extinction are considered to provide the foundation for the practical design of different types of fire suppression systems. Focus on water-based and "clean agent" fire suppression systems, with emphasis on high challenge and special hazard applications. Systems using other agents are introduced, but are not addressed in detail.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP410, ENFP610, or ENFP653.

ENFP655 Smoke Control (3 Credits)

Introduces the student to smoke control needs, design approaches and analytical methods. Students should develop an understanding of the performance characteristics and limitations of smoke control systems and the capabilities and limitations of analytical design aids. This course gives students an opportunity to integrate a broad range of information from previous courses with material from this course, such as fluid mechanics, heat transfer, and fire dynamics, and fire modeling. Students will review data from past experimental programs and apply computer model(s).

Restriction: Permission of Maryland Applied Graduate Engineering.

ENFP661 Forensic Fire Analysis (3 Credits)

This on-line course addresses the forensic analysis of structural fire incidents in terms of enclosure fire dynamics and the impact of fire safety subsystems used to prevent or mitigate the consequences of fire. These subsystems include: ignition prevention, material flammability and flame spread, fire detection and alarm, fire suppression, smoke movement and management, structural fire protection and egress systems. Failures in these subsystems are addressed in terms of differences between expected and observed performance.

Credit Only Granted for: ENFP629D or ENFP661.

Formerly: ENFP629D.

ENFP662 Performance Based Design (3 Credits)

The development of fire protection solutions can involve methods to comply with prescriptive requirements in codes or may incorporate some aspects which follow a performance-based approach. Following a description of the codes and standards process in the U.S., a review of the requirements for structural fire protection are discussed as an example, beginning with prescriptive approaches and ending with performance-based alternatives. The latter half of the course describes the methodology and motivation for performance-based design solutions. Case studies are presented to illustrate the design solutions achieved following the two approaches.

Credit Only Granted for: ENFP629E or ENFP662.

Formerly: ENFP629E.

ENFP663 Advanced Fire Risk Modeling (3 Credits)

This on-line course addresses the fundamentals of fire risk modeling from both theoretical and applied perspectives.

Credit Only Granted for: ENFP629R or ENFP663.

Formerly: ENFP629R.

ENFP664 Advanced Industrial Fire Safety (3 Credits)

This class is designed to introduce students to the basics of process safety with a focus on the methods and techniques that may be utilized when evaluating the existing or proposed safety protection solutions in industrial facilities. An emphasis is placed on properly identifying the hazards that are present, the risk exposure, and how best to address the risk. The foundation is laid by presenting the necessary background information on industrial processes and integrating this information with applicable fire/explosion safety science. Jointly offered with ENFP464.

Credit Only Granted for: ENFP489I, ENFP62 9I, ENFP464, or ENFP664.

Formerly: ENFP489I and ENFP629I.

ENFP665 Advanced Fire and Explosion Investigations (3 Credits)

This course covers many advanced aspects of fire and explosion investigation and reconstruction. Information on field techniques, applicable standards, and best practices are presented with an emphasis on how advanced fire science and fire dynamics can be applied to forensic analysis. Experiments are performed and analyzed to demonstrate the concepts.

Jointly offered with: ENFP465.

Restriction: Permission of the Fire Protection Engineering department.

Credit Only Granted for: ENFP629N, ENFP489N OR ENFP465.

Formerly: ENFP629N.

Additional Information: The course will be taught as a shared senior-level undergraduate course and graduate course.

ENFP667 Advanced Wildland Fires: Science and Applications (3 Credits)

Introduction to the global problem of wildland fires with an overview of the social, political and environmental issues posed as well as detailed coverage of the science, technology and applications used to predict, prevent and suppress wildland fires.

Prerequisite: ENFP312.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP489W, ENFP629W, or ENFP467.

Formerly: ENFP629W.

ENFP671 Material Flammability (3 Credits)

Introduction to the science and technology of polymeric materials. Standard methods for assessment of fire hazards associated with these materials are reviewed. Fundamental mechanisms defining polymer combustion in various scenarios are elucidated.

Recommended: Completion of ENFP415 or ENFP651 and ENFP320 or ENFP420 recommended.

Restriction: Permission of ENGR-Fire Protection Engineering department.

Credit Only Granted for: ENFP629M or ENFP671.

Formerly: ENFP629M.

ENFP799 Master's Thesis Research (1-6 Credits)

Development and completion of Master's Thesis.

Prerequisite: Permission of ENGR-Fire Protection Engineering department.

Recommended: Completion of ENFP graduate requirements.

Repeatable to: 6 credits.

ENGL - English

ENGL402 Chaucer (3 Credits)

Explore the works of Geoffrey Chaucer in their literary and cultural environment. Texts read in Middle English. Readings may include Canterbury Tales, Troilus and Criseyde, dream visions, and lyric poems.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL403 Shakespeare: The Early Works (3 Credits)

Close study of selected works from the first half of Shakespeare's career. Generic issues of early histories, comedies, tragedies. Language, theme, dramatic technique, sources, and early modern English social-historical context.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL404 Shakespeare: The Later Works (3 Credits)

Close study of selected plays from the second half of Shakespeare's career. Generic issues of later tragedies, later comedies, romances. Language, theme, dramatic technique, sources, and early modern English social-historical context.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL408 Literature by Women Before 1800 (3 Credits)

Selected writings by women in the medieval and early modern era.

Prerequisite: Must have completed two English courses in literature; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: WGSS408.

Repeatable to: 9 credits if content differs.

Formerly: WMST408.

ENGL409 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

ENGL410 Edmund Spenser (3 Credits)

Explore the works of Edmund Spenser in their literary and cultural environment. Special attention to The Faerie Queene; also sonnets and lyric poetry.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL412 The Idea of Change in 17th-Century British Literature (3 Credits)

Explore the idea of change—from small adjustments in perspective to political revolutions—in the seventeenth century. We will take up literary experiments such as Edmund Spenser's terrifying vision of cosmic mutability in The Faerie Queene, John Donne's awareness of his vulnerable body as he endures the various stages of an illness, and Margaret Cavendish's embrace of science fiction to imagine new configurations of social life. Topics might include the Reformation and its aftermath; the scientific revolution; the English civil wars; the experience of religious conversion; shifting ideas of race and ethnicity; transatlantic travel and colonial expansion; the idea of "progress" and resistance to it; the agency of women in literary culture and political struggle; changing norms around sexual behavior and identity; and the unstable idea of literature itself. Authors may include Montaigne, Shakespeare, Jonson, Donne, Herbert, Galileo, Marvell, Hooke, Cavendish, Behn, and Milton.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL414 Milton (3 Credits)

Explore the works of John Milton in their literary and cultural environment. Poetry and major prose, with special attention to Paradise Lost. Other works may include Samson Agonistes and shorter poems.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL416 18th-Century British Literature and Culture (3 Credits)

The literatures of the Enlightenment grappled with a sea change in the understanding of humans, commodities, the planet, non-human animals, the body, newly-encountered "others," and God. Once called the "Age of Reason," novels, plays, and philosophy from this period in fact plumb passions, emotions, and sentiments through plots about love, exploitation, envy, crime, desire, and ambition. Satirists mocked everything from colonialism to virtue claims to satire itself. Read works that transformed what it meant to love, resist, exploit, and desire. Paradoxically, this "Age of Passions" elevated sympathy in the crucible of capitalism, invented human rights in the context of Empire; and formulated racial categories on the road to abolition and religious toleration. Authors might include Daniel Defoe, Eliza Haywood, Lady Mary Wortley Montagu, Bernard Mandeville, Jonathan Swift, Alexander Pope, Aphra Behn, William Congreve, Olaudah Equiano, and others.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL420 British Romantic Literature and Culture (3 Credits)

Explore a time (roughly 1780-1830) of great change, political revolution, empire-building, changing economic and sexual relations, and philosophical innovation. Arguably, many of our contemporary notions about literature and what an author is were created during this period. Consider the influence of these changes in such authors as Blake, Wordsworth, Coleridge, Shelley, Keats, Byron, Godwin, Wollstonecraft, Austen, and more.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL422 Empire, Urbanization, Aesthetics: Literature of the Global Victorian Era (3 Credits)

An age of cultural, political, and aesthetic upheaval, the Victorian period was a time of enormous social change: working-class agitation, struggles for women's rights, industrialization, imperial aggression, scientific discovery, and shifting ideas about race and colonialism. Through the study of novels, poems, and non-fiction prose, this course will consider how literature of the British nineteenth century engages with the disordered age in which it was composed. Authors may include Charles Dickens, Elizabeth Gaskell, Elizabeth Barrett Browning, George Eliot, Alfred Tennyson, and Mary Seacole, among others.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL425 Identity, Acceleration, Revolt: British and Postcolonial Literatures Since 1900 (3 Credits)

Examine the innovations of modern and contemporary Anglophone literature in the midst of war and globalization, gender and sexual revolution, decolonization and shifting nationalisms, and technological and economic transformation. Authors might include Virginia Woolf, James Joyce, Derek Walcott, Salman Rushdie, Jeanette Winterson, and Chimamanda Ngozi Adichie.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL428 Seminar in Language and Literature (3 Credits)

Topics will vary each semester. The course will provide a seminar experience in material or methodologies not otherwise available to the major.

Restriction: Junior standing or higher; and must be in the English Honors program or gain permission from the department.

Repeatable to: 12 credits if content differs.

ENGL429 Independent Research in English (1-6 Credits)

An advanced independent research project for qualified students, supervised by an English faculty member, on a topic not ordinarily covered in available courses.

Prerequisite: ENGL301; and two English courses (excluding fundamental studies requirement); and permission of ARHU-English department.

Restriction: Sophomore standing or higher.

Repeatable to: 9 credits if content differs.

ENGL430 Literature of the Americas from First Contact to Revolution (3 Credits)

Examines the literature of the cultural encounters, colonialisms, empires, and independence movements in the early Americas from 1492 through the eighteenth century. Writers typically include Christopher Columbus, John Smith, Anne Bradstreet, Jonathan Edwards, William Byrd, Olaudah Equiano, Phillis Wheatley, and Benjamin Franklin.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL431 American Literature: Revolution to Civil War (3 Credits)

An examination of nationalism, sentimentalism, and romanticism, with writings focusing on such topics as slavery and democracy during the 1770s to 1860s. Authors typically include Ralph Waldo Emerson, Margaret Fuller, Emily Dickinson, Walt Whitman, Frederick Douglass, Harriet Beecher Stowe, Edgar Allan Poe, Nathaniel Hawthorne, and Herman Melville.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL432 American Literature: 1865 to 1914, Realism and Naturalism (3 Credits)

Reconstruction, Realism, Naturalism. Representative writers such as Dickinson, James, Dreiser.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL433 American Literature: 1914 to the Present, the Modern Period (3 Credits)

Modernism, Postmodernism. Writers such as Stevens, Stein, Ellison.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL435 American Poetry: Beginning to the Present (3 Credits)

Selections of American poetry, from Bradstreet to contemporary free verse. Authors such as Whitman, Dickinson, Bishop, Hughes, Rich, and Frost.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL437 Contemporary American Literature (3 Credits)

Prose, poetry, drama of living American writers. Current cultural and social issues.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL438 Selected Topics in Media Studies (3 Credits)

Advanced study of a topic pertinent to how the material production, technologies, and cultural practices of diverse types of media shape meaning.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English department.

Recommended: At least one prior course in Media Studies.

Repeatable to: 9 credits if content differs.

ENGL439 Spotlight on Major Writers (3 Credits)

An intensive study of a single writer, or a handful of writers, to understand the shifts in the writer's craft and cultural influence, both past and present.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL440 The Novel in America to 1914 (3 Credits)

Survey of the American novel to World War I. Cultural and philosophical contexts; technical developments in the genre. Authors such as Melville, Wells Brown, James, Sedgwick, Chopin.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL444 Feminist Critical Theory (3 Credits)

Issues in contemporary feminist thought that have particular relevance to textual studies, such as theories of language, literature, culture, interpretation, and identity.

Prerequisite: WMST200, WGSS200, WMST250, WGSS250, or ENGL250.

Cross-listed with: WGSS444.

Credit Only Granted for: ENGL444, WMST444 or WGSS444.

Formerly: WMST444.

ENGL446 Post-Modern British and American Poetry (3 Credits)

British and American poets from the 1930s to the present. Such poets as Auden, Williams, Plath, Brooks, Lowell, Wolcott, Ted Hughes, Bishop, Larkin, Jarrell, and Berryman.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL448 Literature by Women of Color (3 Credits)

Literature by women of color in the United States, Britain, and in colonial and post-colonial countries.

Prerequisite: Must complete two English courses in literature; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: WGSS448.

Repeatable to: 9 credits if content differs.

Formerly: WMST448.

ENGL449 Selected Topics in U.S. Latinx Literature (3 Credits)

Advanced study of selected works by U.S. Latinx writers.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL452 Restoration and 18th-Century British Drama (3 Credits)

Explore Restoration and 18th-century British drama, with attention to the history of gender, sexuality, capitalism, empire, philosophy, and race. Learn about tragedy, comedy, farce, parody, and burlesque, as well as dramatic and verbal wit.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL453 Critical Theory in English Studies (3 Credits)

Examines our assumptions about literature, language, media, and culture by exploring how people have theorized key concepts and relations like language, materiality, meaning, representation, identity, and power. We will focus both on learning the history, arguments, and vocabularies of these theories and on evaluating their usefulness for helping us to understand the many kinds of texts (visual, aural, etc.) we study in English. Theoretical thinking will aid us in analyzing the forms texts take; the ideas texts record, challenge, or reinvent; and how texts make us think or feel about ourselves, others, and the world in which we live.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL454 Modern Drama (3 Credits)

The history of modern British drama, from its roots in Chekhov and Ibsen, through the modernisms of Samuel Beckett and Bertolt Brecht, through the Angry Young Men of the 1950s, and right up to the present. Most plays will be from the last 40 years, by writers such as David Hare, Tom Stoppard, Lucy Kirkwood, Caryl Churchill, Roy Williams, Lucy Prebble, Alan Bennett, Brian Friel, Terrence Rattigan, Kwame Kwei-Armah, Sarah Kane, and Alice Birch. We will also look at how class, money, immigration, and the end of the Empire changed British plays over time. And we will consider modern theater architecture and production design as well as the directing instincts of, for instance, Peter Brook, Katie Mitchell, Marianne Elliott, and Nicholas Hytner.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL455 The 18th-Century British Novel (3 Credits)

Explore the beginnings of the novel in the late seventeenth and eighteenth centuries. Whether set in exotic locales, rural English homes, or the metropolis of London, novels represented reputedly "ordinary" people—often adolescents—and their daily lives. But what constituted a novel and how it influenced readers was debated throughout the century, and even its name ("novel," "romance," "history," "moral tale") was fluid. The novels we will consider are experimental, adventurous, and metafictional, and they will provoke us to evaluate what we expect of the genre, how it functions, and its aesthetic and cultural stakes. Authors may include Aphra Behn, Daniel Defoe, Eliza Haywood, Samuel Richardson, Henry Fielding, Laurence Sterne, Frances Burney, and Sarah Scott.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL457 The Modern Novel (3 Credits)

Explore the remarkable development and transformation of the novel in the twentieth century. Learn about the development of the novel through realism, modernism, and postmodernism, from the transformations made by major modernists like Joseph Conrad, James Joyce, Virginia Woolf, Jean Toomer, William Faulkner, and Katherine Ann Porter to playful, unusual and fascinating postmodern and contemporary fiction by Ralph Ellison, Kathy Acker, Salman Rushdie, Toni Morrison, and others.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL458 Literature by Women After 1800 (3 Credits)

Selected writings by women after 1800.

Prerequisite: Must have completed two English courses in literature; or permission of Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: WGSS458.

Repeatable to: 9 credits if content differs.

Formerly: WMST458.

ENGL459 Selected Topics in LGBTQ+ Literatures and Media (3 Credits)

Advanced study of a topic pertinent to literary and cultural expressions of LGBTQ+ identities, positionalities, and analytics through an exploration of literature, art, and/or media.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL460 Archival Research Methods in English Studies (3 Credits)

Introduces approaches for doing archival research in English studies, exploring how researchers develop their scope and practices of study and how they access and use archival materials electronically and on site to further their research questions. Investigates a historical period, genre, or theme through the lens of manuscripts, ephemera, and other artifacts. Case studies vary by semester.

Prerequisite: Two English courses beyond the Fundamental Studies courses; or permission of ARHU-English Department.

ENGL461 Researching Literacy and Language (3 Credits)

Gain practical research experience as you learn to do qualitative research in literacy, writing, and language studies. Study reading, writing, and composing in a variety of contexts (for example, social media and other digital spaces, classrooms, writing centers, churches, workplaces or other community sites). Learn to design and conduct ethical, responsible research studies. Learn to collect data through methods such as interview, observation, and survey and to analyze that data through a variety of methods. Finally, learn to present your research through genres such as reports, posters, and/or presentations.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

Credit Only Granted for: ENGL488R or ENGL461.

Formerly: ENGL488R.

ENGL462 Folksong and Ballad (3 Credits)

Explore America's diverse folksong heritage and its impact on world culture. Learn about such regional, ethnic, and popular music forms as ballad, country, bluegrass, blues, rock, gospel, soul, rap, and zydeco within their specific cultural contexts and as commercial products commodified by a voracious music industry. While we will consider the European and African roots of many of these musical traditions, our focus will be on American contributions in the twentieth century. Reading and listening will focus on genres such as blues or bluegrass; particular artists such as Bessie Smith, Robert Johnson, Bill Monroe, and Louis Jordan; and major figures in the recording industry or fieldworker collectors such as Alan Lomax.

ENGL463 Narrative Analysis Methods in English Studies (3 Credits)

Approaches to literary narrative analysis. Explores narrative theory as a research method for studying the fundamental categories of literary narrative—such as the narrator, character, plot, closure, and frames, as well as the nature of fictionality and the role of the reader—and for interpreting their deployment in individual literary works. We will use this method to examine particularly unusual and even radical fiction, so we can understand the meaning-making work accomplished by narrative form.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English department.

ENGL466 Arthurian Legend (3 Credits)

Development of Arthurian legend in English and continental literature from Middle Ages to twentieth century. All readings in modern English.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL467 Creative Approaches to Digital Textuality (3 Credits)

Examines electronic literature and other aspects of the literary world online with a focus on experimental writing with computers. Topics may include digital fiction and storytelling, bots, book hacking, flash fiction, narrative in games, and artificial-intelligence-generated fiction, poetry, and art. No programming experience required.

Prerequisite: One English course beyond Fundamental Studies; or permission of ARHU-English department.

ENGL468 Selected Topics in Film Studies (3-9 Credits)

Advanced studies in various periods and genres of film.

Prerequisite: ENGL245, FILM245, CINE245, FILM283, or SLLC283; or permission of ARHU-English department.

Recommended: ENGL329, CMLT280, and ENGL245.

Repeatable to: 9 credits if content differs.

ENGL469 The Craft of Literature: Creative Form and Theory (3 Credits)

Examines various forms of poetry and/or fiction, emphasizing the practice of making literary art and the aesthetic and theoretical approaches that define it. Students will practice the elements of literary craft, producing and experimenting with a wide range of forms and conventions in poetry and/or fiction. They will also produce critical work that articulates and contextualizes theoretical approaches to the making of literary art.

Prerequisite: 2 ENGL courses in literature or creative writing; and have completed a 200-level creative writing workshop in ENGL. Or permission of ARHU-English department.

Repeatable to: 9 credits if content differs.

ENGL470 African-American Literature: From Slavery to Freedom (3 Credits)

Examines African-American literature from its beginnings to the early twentieth century, including genres ranging from slave narratives, pamphlets, essays, and oratory, to poetry and fiction. Our emphasis is on the interaction between literature and literary forms, on the one hand, and historical and political developments in the push toward emancipation, on the other.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL471 African-American Literature: 1910-1945 (3 Credits)

Emergence of modernism in African-American writing including debates over the definition of unique African-American aesthetics, with emphasis on conditions surrounding the production of African-American literatures.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL472 African-American Literature: 1945 to Present (3 Credits)

Transformation of African-American literatures into modern and postmodern forms. Influenced by World War II and the Civil Rights and Black Power movements, this literature is characterized by conscious attempts to reconnect literary and folk forms, the emergence of women writers, and highly experimental fiction.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL475 Postmodern Literature (3 Credits)

Explore the origins and ongoing development of postmodern literature. Learn about the "postmodern condition," such as the collapse of identity, the erasure of cultural and aesthetic boundaries, and the dissolution of life into textuality. Explore art that has come in the wake of postmodernism and has attempted to move beyond it. Readings might include novels and other genres in varied media by Samuel Beckett, Art Spiegelman, Julian Barnes, Colson Whitehead, Ruth Ozeki, Zadie Smith, and others.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

ENGL477 BookLab (3 Credits)

Historical, imaginative, and experiential introduction to different elements of books and bookmaking, including letterpress printing with traditional lead and wood (movable) type, different techniques for bindings, 3D printing, zines, making altered and treated books, and so on. Class-time will be a mix of discussion and hands-on activity. The course will culminate in each student designing and creating their own book object, which might take the form of an artist's book, chapbook, zine, an altered or treated book, or something else entirely. Taught with the resources and facilities available in the English department's BookLab.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Credit Only Granted for: ENGL428M, ENGL438P, ENGL479P, or ENGL477.

Formerly: ENGL428M, ENGL438P, ENGL479P.

ENGL478 Selected Topics in Literature before 1800 (3 Credits)

Advanced study of key topics in literary works from earlier historical periods.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL479 Selected Topics in Literature after 1800 (3 Credits)

Advanced study of key topics in literary works from later historical periods.

Prerequisite: Two English courses beyond Fundamental Studies; or permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL482 History of the English Language (3 Credits)

Examines the origins and development of the English language.

Prerequisite: ENGL280, LING200, or HESP120; or permission of ARHU-English department.

ENGL483 American English(es) (3 Credits)

Examines the diversity of dialects, registers, and jargons of English found in the United States, as well as their origins, structures, and functions in society.

Prerequisite: LING200, ENGL280, or HESP120; or permission of ARHU-English department.

ENGL484 Style and Grammar in Written English (3 Credits)

The linguistic analysis of written texts. Examines grammatical and discursive constructions above the level of the sentence and their functions in literary and non-literary texts. We will study narrative structure, authorial voice, genre, register, stance, viewpoint, empathy, surprise, and humor in language.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

ENGL487 Principles and Practices of Rhetoric (3 Credits)

A seminar examining foundational concepts and approaches in the theory and practice of rhetoric in civic, professional, academic, and interpersonal settings; focusing on key issues in persuasion, argumentation, and eloquence in historical and contemporary contexts.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

ENGL488 Topics in Advanced Writing (3 Credits)

Different genres of technical and professional writing including proposal writing, computer documentation, technical report writing, instruction manuals, etc. Students will analyze models of a genre, produce their own versions, test, edit and revise them.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

Repeatable to: 9 credits if content differs.

ENGL489 Special Topics in Language and Rhetoric (3 Credits)

Special topics in language and rhetoric, such as discourse analysis, semantics, or cognitive linguistics; comparative rhetoric and rhetorical theory, digital rhetorics, women's and minority rhetorics, or the history of rhetoric.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

Repeatable to: 9 credits if content differs.

ENGL491 Digital Rhetoric (3 Credits)

Examines the social significance of the ways digital texts are composed and circulated. Explores why it matters how the web is written and who does the writing, understanding the Internet as rhetorical from its content and communities to the code, protocols, and policies that control digital distribution. Includes active experimentation with digital tools so students can expand their theoretical understanding through critical making.

Prerequisite: Students must have satisfied the Fundamental Studies Academic Writing requirement.

Credit Only Granted for: ENGL489J, or ENGL491.

Formerly: ENGL489J.

ENGL492 Graphic Design and Rhetoric (3 Credits)

An exploration of the visual dimensions of texts and the skills involved in designing them well. Considers graphic design theory and history from a rhetorical perspective, working to understand and practice the use of symbol systems to express, inform, and advocate. Includes direct experimentation with the principles and techniques of graphic design.

Prerequisite: Students must have satisfied Fundamental Studies Academic Writing requirement.

ENGL493 Writing Genres as Social Action (3 Credits)

A rhetorical genre studies approach to understanding the work that texts do in the world. Examines issues of identity, power, and medium as they relate to writing in various contexts. Students analyze the texts, context(s), and social significance of a public, professional, digital, and/or advanced academic genre and produce writing that meets, modifies, and subverts expectations.

Recommended: Satisfactory completion of the professional writing requirement (FSPW).

Restriction: Must have earned a minimum of 60 credits.

ENGL494 Editing and Document Design (3 Credits)

Principles of general editing for clarity, precision and correctness. Applications of the conventions of grammar, spelling, punctuation and usage, and organization for logic and accuracy. Working knowledge of the professional vocabulary of editing applied throughout the course.
Prerequisite: One course in Fundamental Studies Professional Writing; or permission of ARHU-English Department.

ENGL495 Independent Study in Honors (1-3 Credits)

Completion and presentation of the senior honors project.
Prerequisite: ENGL373 and ENGL370.
Restriction: Must be in English Language and Literature program; and candidacy for honors in English.

ENGL497 English at Work (3 Credits)

Examines how English majors put their academic knowledge and skills to work in professional workplaces after graduation. Students learn strategies to research careers, and they shadow a person in a career of interest for a day. Students learn to compose different professional genres to write and speak about and for professional development and advancement, including inquiry letters, technical descriptions, professional portfolios, and elevator pitches. Students will critically examine the learning they have done in their undergraduate coursework and compose a vision for bringing that learning to life in their future work.
Prerequisite: ENGL301; and an ENGL course at the 300-level or higher.
Restriction: Must have earned a minimum of 60 credits.

ENGL498 Advanced Fiction Workshop (3 Credits)

An advanced class in the making of fiction. Intensive discussion of students' own fiction. Readings include both fiction and essays about fiction by practicing writers. Writing short critical papers, responding to works of fiction, and to colleagues' fiction, in-class writing exercises, intensive reading, and thinking about literature, in equal parts, and attendance at readings.
Prerequisite: ENGL352; or permission of ARHU-English department.
Repeatable to: 9 credits if content differs.

ENGL499 Advanced Poetry Workshop (3 Credits)

An advanced class in the making of poetry. Intensive discussion of students' own poems. Readings include both poetry and essays about poetry by practicing poets. Writing short critical prose pieces, responding critically to colleagues' poems, in-class and outside writing exercises, and attendance at poetry readings.
Prerequisite: ENGL353; or permission of ARHU-English department.
Repeatable to: 9 credits.

ENGL601 Introduction to Graduate Studies (3 Credits)

An introduction to different elements of graduate work and an exploration of what it means to get a doctoral degree in English. Considers different career trajectories, in and outside of academia, as well as the future of higher education.

ENGL602 Critical Theory and Literary Criticism (3 Credits)

An introduction to critical theory and literary criticism, with an overview of major movements (including formalism, structuralism and poststructuralism, Marxism, psychoanalysis, and feminism). Designed to help graduate students assess the various ways of approaching and writing about literature.

ENGL607 Readings in the History of Rhetorical Theory to 1900 (3 Credits)

Earlier theories of effective written discourse surveyed historically and as influenced by ethical, technical, and social change.

ENGL609 Technologies of Writing (3 Credits)

ENGL 609 - Technologies of Writing: Readings in the technologies of writing systems, print, and new media.
Restriction: Permission of ARHU-English department.
Repeatable to: 9 credits if content differs.
Additional Information: May fulfill a requirement for the MA in English with a Concentration in Rhetoric and Composition.

ENGL611 Approaches to College Composition (3 Credits)

A seminar emphasizing rhetorical and linguistic foundations for the handling of a course in freshman composition.
Prerequisite: Permission of ARHU-English department.
Additional Information: Required for graduate assistants (optional to other graduate students).

ENGL612 Approaches to Professional and Technical Writing (3 Credits)

A pedagogical approach to professional and technical writing, its history and methodology.

ENGL618 Writing for Professionals (3 Credits)

Writing proposals, reports, manuals, policy statements, correspondence, etc. for typical government and business settings. Principles of rhetorical and linguistic analysis and techniques for managing the review process in large organizations.
Repeatable to: 9 credits if content differs.

ENGL619 Readings in Linguistics (3 Credits)

A survey of theoretical and applied linguistics.
Restriction: Permission of ARHU-English department.
Repeatable to: 9 credits if content differs.

ENGL620 Readings in Medieval English Literature (3 Credits)**ENGL621 Readings in Renaissance English Literature (3 Credits)****ENGL622 Readings in Seventeenth-Century English Literature (3 Credits)****ENGL623 Readings in Eighteenth-Century English Literature (3 Credits)****ENGL624 Readings in English Romantic Literature (3 Credits)****ENGL625 Readings in English Victorian Literature (3 Credits)****ENGL626 Readings in American Literature before 1865 (3 Credits)****ENGL628 Readings in African American Literature (3 Credits)****ENGL629 Readings in Folklore, Folklife, and Myth (3 Credits)**

Readings pertaining to various genres of folklore and myth such as oral narrative, epic poetry, ballad, folksong, belief, custom and material culture, with special attention given to the history of the study of folklore including fieldwork, interpretation and the political application of these materials. Explores issues of ethnicity, geography, religion, race, gender, and class, as well as the ongoing relations between orality, literacy, print, and other media.

Restriction: Permission of ARHU-English department.

Repeatable to: 6.0 credits if content differs.

ENGL630 Readings in 20th Century English Literature (3 Credits)**ENGL631 Readings in 20th Century American Literature (3 Credits)****ENGL638 Readings in Film as Text and Cultural Form (3 Credits)**

An inquiry into theoretical approaches to the cinematic text that include studies of form, culture, reception, ideological formations, historical contextualizations, and the problematics of representation.

Repeatable to: 6 credits if content differs.

ENGL648 Contemporary American Literature (3 Credits)

A survey of American literature in the 21st Century.
Restriction: Permission of ARHU-English department.
Repeatable to: 9 credits.

ENGL649 Readings in Rhetoric, Composition, and Literacy (3 Credits)

Readings in Rhetoric, Composition, and Literacy. Special Topics in the theory and research of rhetoric, composition, and literacy

Restriction: Permission of ARHU-English department.

Repeatable to: 9 credits if content differs.

Additional Information: May fulfill requirement for MA in English with a Concentration in Rhetoric and Composition.

ENGL658 Readings in Multi-Ethnic Literatures of the Americas (3 Credits)

Highlights the cultural diversity of American literatures from various periods, including Latino/a, Native American, Asian American, and African American literatures within and beyond the United States.

Restriction: Permission of English Department.

Repeatable to: 9 credits if content differs.

ENGL659 Readings in Postcolonial Literatures and Theory (3 Credits)

Readings in post-colonial, diasporic, and trans-national theory and literature.

Restriction: Permission of ARHU-English department.

Repeatable to: 6 credits if content differs.

ENGL668 Readings in Modern Literary Theory (3-6 Credits)

Formerly: ENGL666.

ENGL679 Professional and Career Mentoring for Master's Students (1-3 Credits)

Augments advising currently provided by the English Department Graduate Studies Office. Individual professional and career mentoring for MA and MFA students from a faculty member.

Repeatable to: 6 credits if content differs.

ENGL688 Poetry Workshop (3 Credits)

Poetry workshop.

Prerequisite: Permission of ARHU-English department.

ENGL689 Fiction Workshop (3 Credits)

Fiction workshop.

Prerequisite: Permission of ARHU-English department.

ENGL699 Independent Study (1-3 Credits)

Restriction: Permission of instructor; and departmental approval of research project.

ENGL701 Paradigms of Theory (3 Credits)

Exploration of the works of four or five major critical thinkers who underwrite the study of theory in the academy today, with special attention to the diversity within critical theory.

ENGL702 Cultures of Theory (3 Credits)

An exploration of the socio-historic, material, and cultural contexts of various theoretical practices and traditions.

Prerequisite: Must have completed an introductory course in critical theory.

Cross-listed with: CMLT702.

Credit Only Granted for: CMLT702 or ENGL702.

ENGL708 Seminar in Rhetoric (3 Credits)

Topics in rhetoric: history of rhetorical theory, modern rhetorical theory, rhetorical interpretation, composition theory, rhetoric of social groups.

Repeatable to: 9 credits if content differs.

ENGL709 Seminar in Transnational Literatures and Cultures (3 Credits)

Examines cultural and political ideas as they circulate across nations in literary and/or other forms (film, song, visual culture, digital works, etc.) in both historical and modern-day contexts.

Cross-listed with: CMLT709.

Restriction: Permission of ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL718 Seminar in Medieval Literature (3 Credits)**ENGL719 Seminar in Renaissance Literature (3 Credits)****ENGL728 Seminar in Seventeenth-Century Literature (3 Credits)****ENGL729 Seminar in Eighteenth-Century Literature (3 Credits)****ENGL738 Seminar in Nineteenth-Century Literature (3 Credits)****ENGL739 Seminar in the Digital Humanities (3 Credits)**

Examines a broad range of materials, including essays, literature, film, VR, videogames, and other digital texts to engage with and read digital experiences from literary, cultural, and computational perspectives.

Restriction: Permission of the ARHU-English Department.

Repeatable to: 9 credits if content differs.

ENGL748 Seminar in American Literature (3 Credits)**ENGL749 Studies in Twentieth-Century Literature (3 Credits)****ENGL758 Literary Criticism and Theory (3 Credits)****ENGL759 Seminar in Literature and the Other Arts (3 Credits)****ENGL768 Studies in Genre (3 Credits)**

Restriction: Permission of ARHU-English department.

Repeatable to: 9 credits if content differs.

ENGL775 Seminar in Composition Theory (3 Credits)

Readings and research in recent theories of effective writing.

ENGL776 Seminar in Modern Rhetorical Theory (3 Credits)

Seminar in Modern Rhetorical Theory. Theories and trends in twentieth and twenty-first century rhetorical theory

Restriction: Permission of ARHU-English department.

Additional Information: May fulfill seminar requirements for MA in English with Concentration in Rhetoric and Composition.

ENGL778 Seminar in Folklore and Myth (3 Credits)

Restriction: Permission of ARHU-English department.

Repeatable to: 6.0 credits if content differs.

ENGL779 Seminar in Language Study (3 Credits)

Seminar in linguistic aspects of literature and composition.

ENGL788 Studies in Poetic Form (3 Credits)

Repeatable to: 9 credits.

ENGL789 Form and Theory in Fiction (3 Credits)

A variety of prose modes (mediations, psychological studies, reportage myths, collage, magic realism, satire, etc.). Some of the writers to be read include Kafka, Cather, Barth, Kundera, and Barthelme.

Prerequisite: Permission of ARHU-English department.

ENGL798 Critical Theory Colloquium (1 Credit)

An intensive advanced exploration of current problems and issues in critical theory.

Prerequisite: A course in critical theory.

Repeatable to: 10 credits if content differs.

ENGL799 Master's Thesis Research (1-6 Credits)**ENGL809 Academic Publishing Workshop (1-2 Credits)**

A workshop for the preparation of articles of other critical writing for publication in academic journals or other professional venues.

Restriction: Must be in a major within ARHU-English department; and permission of instructor.

Repeatable to: 8 credits if content differs.

Additional Information: Preference will be given to doctoral students beyond coursework.

ENGL819 Seminar in Themes and Types in English Literature (3 Credits)**ENGL828 Seminar in Themes and Types in American Literature (3 Credits)****ENGL829 Seminar in Postcolonial Literatures (3 Credits)**

Postcolonial, transnational, and diasporic literatures in the Anglophone world.

Restriction: Permission of ARHU-English department.

Repeatable to: 6 credits if content differs.

ENGL878 Pedagogical Mentoring for Doctoral Students (1-3 Credits)

Pedagogical mentoring by roster faculty members for graduate students teaching 200-level literature courses.

Repeatable to: 12 credits if content differs.

ENGL879 Professional Mentoring for Doctoral Students (1-3 Credits)

Augments advising currently provided by the English Department Graduate Studies Office. Individual professional and career mentoring for PhD students from a faculty member.

Repeatable to: 12 credits if content differs.

ENGL888 Practicum in English Studies (1 Credit)**ENGL898 Pre-Candidacy Research (1-8 Credits)**

Pedagogical mentoring by roster faculty members for graduate students teaching 200-level literature courses.

Repeatable to: 12 credits if content differs.

ENGL899 Doctoral Dissertation Research (1-8 Credits)

ENMA - Engineering, Materials

ENMA400 Introduction to Atomistic Modeling in Materials (3 Credits)

This is an introductory course designed to study atomistic modeling and simulation techniques used in materials research. This course covers the theories, methods, and applications of atomistic-scale modeling techniques in simulating, understanding, and predicting the properties of materials. Specific topics include: molecular statics using empirical force fields; quantum mechanical methods including density functional theory; molecular dynamics simulations; and Monte Carlo and kinetic Monte Carlo modeling.

Prerequisite: ENMA300, MATH206, and ENMA460.

Recommended: Basic knowledge in quantum mechanics (preferred but not required); basic knowledge in statistical mechanics (preferred but not required). Also offered as: ENMA600.

Credit Only Granted for: ENMA489A, ENMA400, ENMA698A, or ENMA600.

Formerly: ENMA489A.

ENMA401 Continuum Modeling of Materials (3 Credits)

Introduces continuum modeling techniques in materials science and engineering. This course covers and emphasizes the applications of continuum modeling techniques using COMSOL software package in simulating a range of materials phenomena and properties. Specific topics of continuum modeling include: The construction and analyses of continuum models using COMSOL software package; Structural mechanics; Heat transfer; Electrical current; Chemical species transport; Fluid flow; Multi-physics models coupling above phenomena.

Prerequisite: ENMA362, PHYS270, PHYS271, and MATH246; or equivalent; and ENMA165 or MATH206.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA401 or ENMA489C.

Formerly: ENMA489C.

ENMA410 Materials for Energy I (3 Credits)

The goal is to demonstrate the role of materials in solving one of the most critical socio-economic issues of our time, affordable and sustainable energy. There will be a discussion of U.S. and global energy and related environmental issues. Topics covered include: fuel cells and batteries (electrochemical energy conversion and storage); catalysts and membrane separations (fossil fuel and biomass energy conversion); and nuclear fuels.

Prerequisite: Minimum grade of C- in ENMA300; and permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA410 or ENMA489H.

Formerly: ENMA489H.

ENMA411 Materials for Energy II (3 Credits)

Demonstrates the role of materials in solving one of the most critical socio-economic issues of our time, affordable and sustainable energy. Materials for Energy is a two-part course based on material functionality; however, they are independent and neither is a prerequisite for the other. Materials for Energy II will focus on electrical, optical, thermal, and mechanically functional materials for energy devices. Solar cells, solar fuel, solar thermal, energy efficient lighting, building energy, thermoelectric and wind energy will be covered.

Prerequisite: Minimum grade of C- in ENMA300; and permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA411 or ENMA489I.

Formerly: ENMA489I.

ENMA412 Fundamentals of Photovoltaics (3 Credits)

Overview of the fundamentals of photovoltaic devices, including principles of operation, with emphasis on the materials science aspects of the different technologies available.

Prerequisite: ENMA300; and permission of ENGR-Materials Science & Engineering department.

ENMA414 Introduction to Solid State Ionics (3 Credits)

Solid State Ionics is the study of point defects in crystalline and non-crystalline solids; defect equilibria and transport; the influence of chemical and electric potentials, interfaces, and association; and the application of ionically conducting solids in solid-state electrochemical transducer systems and devices.

Prerequisite: ENMA300; and permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA414 or ENMA489W.

Formerly: ENMA489W.

ENMA421 Design of Composites (3 Credits)

Fundamentals of design, processing and selection composite materials for structural applications will be covered. The topics include a review of all classes of materials, an in-depth analysis of micro and macro mechanical behavior including interactions at the two-phase interfaces, modeling of composite morphologies for optimal microstructures, material aspects, cost considerations, processing methods including consideration of chemical reactions and stability of the interfaces, and materials selection considerations.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA421 or ENMA489A.

Formerly: ENMA489A.

ENMA422 Radiation Effects of Materials (3 Credits)

Ionizing radiation, radiation dosimetry and sensors, radiation processing, radiation effects on: polymers, metals, semiconductors, liquids, and gases. Radiation in advanced manufacturing, radiation-physical technology.

Prerequisite: ENMA300; and permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA422 or ENMA489E.

Formerly: ENMA489E.

ENMA425 Introduction to Biomaterials (3 Credits)

Examination of materials used in humans and other biological systems in terms of the relationships between structure, fundamental properties and functional behavior. Replacement materials such as implants, assistive devices such as insulin pumps and pacemakers, drug delivery systems, biosensors, engineered materials such as artificial skin and bone growth scaffolds, and biocompatibility will be covered.

Recommended: ENMA300.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: BIOE453, CHBE457, or ENMA425.

ENMA426 Reliability of Materials (3 Credits)

Students are taught the basic degradation mechanisms of materials, through the understanding of the physics, chemistry, mechanics of such mechanisms. Mechanical failure mechanisms concentrate on fatigue, and creep. Chemical failure mechanisms emphasize corrosion and oxidation. Physical mechanisms such as diffusion, electromigration, defects and defect migration, surface trapping mechanisms, charge creation and migration are also included.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA426 or ENMA489R.

Formerly: ENMA489R.

ENMA431 Nanomechanics of Biomaterials (3 Credits)

Focuses on the latest scientific developments and discoveries in the nanoscale structure and properties of biological materials. The course begins with introductory lectures on the various nanostructures of biomaterials, and their physiological roles under mechanical forces. General aspects of biopolymers, protein folding, and self-assembly are also covered. Next, a series of in-depth lectures are presented on the characterization methods of nanomechanical properties using single molecule techniques. Finally, current applications of nanobiomaterials in the area of molecular machines, molecular self-assembly, and nanoscaffold are discussed.

Prerequisite: ENMA300; and permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA431 or ENMA489B.

Formerly: ENMA489B.

ENMA434 Quantum Mechanics for Engineers (3 Credits)

Provides engineering students with a foundational understanding of quantum mechanics and its practical applications in the field of materials science. This course will equip students with the essential knowledge and skills required to harness the principles of quantum mechanics in their pursuit of innovative solutions in materials science and engineering.

Prerequisite: MATH241 and PHYS270.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA435 Wide Bandgap Materials and Devices (3 Credits)

Presents the materials science of wide bandgap materials and analyzes the defects present in such materials from a device performance point of view.

Prerequisite: ENMA300 and ENMA465.

Corequisite: ENMA460.

Jointly offered with: ENMA635.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA435 or ENMA635.

ENMA436 Introduction to Quantum Materials and Devices (3 Credits)

Quantum materials and devices are an emerging field in materials engineering and physics which offer new approaches to electronics and photonics. This course serves as an introduction to quantum materials and their applications in quantum technologies. It will teach concepts needed to understand the quantum mechanical properties of materials and connect their fundamental properties to quantum device applications. Topics will include low-dimensional materials, strongly correlated electron systems, topology in solids, and light-matter interactions

Prerequisite: ENMA460 and ENMA461 .

Jointly offered with: ENMA636.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA436 or ENMA636.

ENMA437 Machine Learning for Materials Science (3 Credits)

Familiarizes students with basic as well as state of the art knowledge of machine learning and its applications to materials science and engineering. Covers the range of machine learning topics with applications including feature identification and extraction, determining predictive descriptors, uncertainty analysis, and identifying the most informative experiment to perform next. One focus of the class is to build the skills necessary for developing an autonomous materials research system, where machine learning controls experiment design, execution, and analysis in a closed-loop.

Prerequisite: MATH206, ENMA300, and MATH461.

Jointly offered with: ENMA637.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA489L, ENMA437 or ENMA637.

Formerly: ENMA489L.

ENMA440 Nano Plasma Processing of Materials (3 Credits)

Sustaining mechanisms of plasmas are covered, especially low-pressure electrical gas discharges, fundamental plasma physics, sheath formation, electric and magnetic field effects, plasma-surface interactions in chemically reactive systems, plasma diagnostic techniques and selected industrial applications of low pressure plasmas.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA440, ENMA489P, ENMA640, or ENMA698P.

Formerly: ENMA489P.

ENMA441 Characterization of Materials (3 Credits)

Techniques to characterize the properties of materials whose characteristic dimensions range from nanometers to macroscopic. These include conventional crystalline and noncrystalline materials, with a special attention to materials of current technological interest. The course will include recent results from the scientific literature.

Prerequisite: ENMA300, ENMA165 or MATH206.

Restriction: Permission of ENGR-Materials Science & Engineering department; and senior standing.

Credit Only Granted for: ENMA489T or ENMA441.

Formerly: ENMA489T.

ENMA442 Nanomaterials (3 Credits)

An exploration of materials whose structure places them at the boundary between small objects and large molecules. Having characteristic dimensions in the range of 1-100 nanometers, these materials are difficult to synthesize and characterize but are nevertheless at the forefront of science and technology in many fields. Also, the methods for creating, manipulating and measuring these materials with an emphasis on the current scientific literature will be covered. The novel properties and potential applications will also be addressed.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA442 or ENMA489N.

Formerly: ENMA489N.

ENMA443 Photonic Materials, Devices and Reliability (3 Credits)

The course focuses on the understanding of the basic optical processes in semiconductors, dielectrics and organic materials. The application of such materials in systems composed of waveguides, light emitting diodes and lasers, as well as modulators is developed.

Restriction: Permission of ENGR-Materials Science & Engineering department; and junior standing or higher.

Credit Only Granted for: ENMA443 or ENMA489Z.

Formerly: ENMA489Z.

ENMA445 Liquid Crystals and Structured Soft Materials (3 Credits)

Elective course on the properties and behavior of liquid crystals and related soft materials, and their relationship to biomaterials and to applications.

Prerequisite: MATH246, PHYS270, and PHYS271.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA445 or ENMA489L.

Formerly: ENMA489L.

ENMA460 Introduction to Solid State Physics (3 Credits)

Classes of materials; introduction to basic ideal and real materials' behavior including mechanical, electrical, thermal, magnetic and optical responses of materials; importance of microstructure in behavior. One application of each property will be discussed in detail.

Prerequisite: PHYS271, PHYS270, and MATH241.

Cross-listed with: PHYS431.

Restriction: Junior standing or higher; and must be in the Engineering: Materials Science program or Physics program.

Credit Only Granted for: ENMA460 or PHYS431.

Additional Information: Materials Engineering students take ENMA460 and Physics students take PHYS431.

ENMA461 Thermodynamics of Materials (3 Credits)

Thermodynamic aspects of materials; basic concepts and their application in design and processing of materials and systems. Topics include: energy, entropy, adiabatic and isothermal processes, internal and free energy, heat capacity, phase equilibria and surfaces and interfaces.

Prerequisite: ENMA300.

Restriction: Junior standing or higher.

ENMA463 Macroprocessing of Materials (3 Credits)

Processing of modern, bulk engineering materials. Raw materials, forming, firing, finishing and joining. More emphasis on metals and ceramics than polymers.

Prerequisite: ENMA300.

Restriction: Junior standing or higher.

ENMA464 Environmental Effects on Engineering Materials (3 Credits)

Introduction to the phenomena associated with the resistance of materials to damage under severe environmental conditions. Oxidation, corrosion, stress corrosion, corrosion fatigue and radiation damage are examined from the point of view of mechanism and influence on the properties of materials. Methods of corrosion protection and criteria for selection of materials for use in radiation environments.

Prerequisite: ENMA300. Or permission of ENGR-Materials Science & Engineering department; and permission of instructor.

ENMA465 Microprocessing Materials (3 Credits)

Micro and nanoscale processing of materials. Emphasis on thin film processing for advanced technologies.

Prerequisite: ENMA300.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA363, ENMA489B, or ENMA465.

Formerly: ENMA363.

ENMA466 Advanced Materials Fabrication Laboratory (3 Credits)

This course allows students an opportunity to study advanced materials systems in depth through a combination of lectures and hands-on laboratory experiments. Students will be trained in materials processing and characterization techniques. Each student will fabricate materials and devices in our state-of-the-art nanofabrication clean room facility (Fablab), as well as evaluate them using a variety of characterization techniques.

Prerequisite: ENMA465; and permission of ENGR-Materials Science & Engineering department.

ENMA470 Materials Selection for Engineering Design (3 Credits)

Students will learn about materials classes, properties, limitations and applications and the methodology of materials selection in engineering design.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Restriction: Junior standing or higher.

Credit Only Granted for: ENMA 470 or ENMA 489O.

Formerly: ENMA 489O.

ENMA471 Kinetics, Diffusion and Phase Transformations (3 Credits)

Fundamentals of diffusion, the kinetics of reactions including nucleation and growth and phase transformations in materials.

Prerequisite: Must have completed or be concurrently enrolled in ENMA461.

Restriction: Junior standing or higher; or permission of ENGR-Materials Science & Engineering department.

ENMA472 Additive Manufacturing of Materials (3 Credits)

Additive manufacturing approaches for metals, ceramics and polymers will be explored in terms of manufacturability and how processing parameters affect microstructure and properties. The course will include projects, including a Terrapin Works project to design and build a part, to develop an understanding of the current state of additive manufacturing, its future promise and its limitations.

Prerequisite: ENMA300.

Restriction: Must be in Engineering: Materials Science program.

Credit Only Granted for: ENMA472 or ENMA672.

ENMA473 Engineering Using High Strength Metals and Alloys (3 Credits)

This is a class focused on the materials engineering challenges of applying high strength metals and alloys to solutions. The extraordinary properties of these alloys derive from (1) highly metastable microstructures, (2) high strengths and melting points of the base metals, (3) complicated processing and fabrication procedures, and (4) their resulting complex behavior in extreme environments. This course will give you the knowledge base you need to select, apply and troubleshoot the performance of high strength metals and alloys in a variety of applications.

Prerequisite: ENMA300, ENMA362, and ENMA461; and permission of ENGR-Materials Science & Engineering department.

ENMA474 Introduction to Computational Materials Science (3 Credits)

This is an introductory course aiming for junior and senior undergraduate students to study atomistic modeling and simulation techniques that are used in materials science. This course covers the theories and applications of atomistic scale modeling techniques to simulate, understand, and predict the properties of materials. Topics include: molecular statics, quantum mechanical methods, molecular dynamics simulations and Monte Carlo simulations.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA474 or ENMA489A.

Formerly: ENMA489A.

ENMA475 Fundamentals of Diffraction Techniques in Materials Science (3 Credits)

This course looks at the advanced methods of x-ray scattering/diffraction available thanks to the more powerful sources available to us. The availability of these sources enables us to study liquid crystals, polymers, nanomaterials, quasiorganized materials (including nano) and disordered materials.

Prerequisite: MATH246, PHYS270, and PHYS271.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA475 or ENMA489M.

Formerly: ENMA489M.

ENMA476 NanoManufacturing: Materials Design and Systems Integration (3 Credits)

The fundamentals of nanomanufacturing based on state-of-the-art and future prospects in materials design and systems integration. The course examines functional nanomaterials design and synthesis, structural assembly from nanoscale to macroscale, and device fabrication. Distinct from the current curricular paradigm in many nanotechnology programs that focus on underlying science, this course emphasizes the immediate need for scale-up, process robustness, and system integration issues. Featuring case studies from industry, end of chapter problems, and study questions, the course is for upper-level undergraduate and graduate students, who are interested in the future of manufacturing innovation and technology.

Restriction: Must be in Engineering: Materials Science program.

ENMA481 Introduction to Electronic and Optical Materials (3 Credits)

Electronic, optical and magnetic properties of materials. Emphasis on materials for advanced optoelectronic and magnetic devices and the relationship between properties and the processing/fabrication conditions.

Prerequisite: ENMA300; or students who have taken courses with comparable content may contact the department.

ENMA482 Introduction to Electron Microscopy (3 Credits)

An introduction of the basic principles of operation for modern electron microscopes. Details will be given on the construction of microscopes, their basic operation, and the types of questions that can be addressed with an electron microscope. Emphasis will be placed on a conceptual understanding of the underlying theories. Where appropriate, mathematical descriptions will be utilized. Upon completion of this course, students will be expected to have a basic understanding sufficient to give interpretations of microscopy images and to suggest the correct tool or approach for certain research studies.

Prerequisite: PHYS142, PHYS122, or PHYS260.

Credit Only Granted for: ENMA482 or ENMA489J.

Formerly: ENMA489J.

ENMA484 Fundamentals of Finite Element Modeling (3 Credits)

A brief review of mechanical behavior of materials, introduction to Finite Element Modeling (FEM), and procedures for predicting mechanical behavior of materials by FEM using computer software (at present ANSYS). The FEM procedures include, setting up the model, mesh generation, data input and interpretation of the results.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA484 or ENMA489F.

Formerly: ENMA489F.

ENMA486 Seminar in Materials Science and Engineering (1 Credit)

Current research in materials science and engineering and related fields. The lectures are presented by scientists and engineers from academia, national laboratory, US government, etc., in the format of seminars.

Restriction: Must be in Engineering: Materials Science program.

ENMA487 Capstone Preparation (1 Credit)

In preparation for the senior level design course, students will do background research and develop white papers from which teams will form around short listed design projects. The projects should focus on a society, industry, military or technological based problem in Materials Science and Engineering leading to a design and strategy to address the problem in the following course, ENMA 490. The course will include written and oral presentations of the white papers and team proposals.

Restriction: Must be in Engineering: Materials Science program; and senior standing; and permission of ENGR-Materials Science & Engineering department.

ENMA489 Selected Topics in Engineering Materials (3 Credits)

Selected topics of current importance in materials science and engineering.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Repeatable to: 12 credits if content differs.

ENMA490 Materials Design (3 Credits)

Capstone design course. Students work in teams on projects evaluating a society or industry based materials problem and then design and evaluate a strategy to minimize or eliminate the problem; includes written and oral presentations.

Prerequisite: Minimum grade of C- in ENMA487.

Restriction: Senior standing.

ENMA495 Polymeric Engineering Materials I (3 Credits)

Study of polymeric engineering materials and the relationship to structural type. Elasticity, viscoelasticity, anelasticity and plasticity of single and multiphase materials. Emphasis is on polymeric materials.

Prerequisite: ENMA300.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA496 Polymeric Materials: Structure, Property, and Processing (3 Credits)

An intermediate level treatment of structures of polymers. An introduction to mechanical properties and processing of polymeric materials. Emphasis will be on how to establish the structure-property relationship and on how to achieve such understanding via different characterization methods.

Prerequisite: ENMA300; and permission of ENGR-Materials Science & Engineering department.

Cross-listed with: CHBE496.

Credit Only Granted for: ENMA496 or CHBE496.

ENMA499 Senior Laboratory Project (1-3 Credits)

Students work with a faculty member on an individual laboratory project in one or more of the areas of engineering materials. Students will design and carry out experiments, interpret data and prepare a comprehensive laboratory report.

Restriction: Permission of ENGR-Materials Science & Engineering department; and senior standing.

ENMA600 Advanced Atomistic Modeling in Materials (3 Credits)

This is an advanced course designed to study atomistic modeling and simulation techniques used in materials research. This course covers the theories, methods, and applications of atomistic-scale modeling techniques in simulating, understanding, and predicting the properties of materials. Specific topics include: molecular statics using empirical force fields; quantum mechanical methods including density functional theory; molecular dynamics simulations; and Monte Carlo and kinetic Monte Carlo modeling.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA600, ENMA 698A, ENMA400 or ENMA489A.

Formerly: ENMA698A.

ENMA601 Continuum Modeling of Materials (3 Credits)

An introductory course of continuum modeling in materials science and engineering. This course covers and emphasizes the applications of continuum modeling techniques using COMSOL software package in simulating a range of materials phenomena and properties.

Jointly offered with: ENMA401.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA401, ENMA601 or ENMA698C.

Formerly: ENMA698C.

ENMA613 Materials Science of Quantum Computing (3 Credits)

Quantum computing is the emerging field that attempts to perform information processing on a quantum mechanical state (qubit). This graduate level course targets advanced undergraduate and beginning graduate students for an introduction to this field of applied physics and the related material structures needed for elementary quantum computing. This course focuses on targeted topics of quantum mechanics and solid state physics as applicable to ion trap qubits, electron spin qubits, and superconducting qubits with connections to actual material structures their design and means of fabrication.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Recommended: Strongly recommended coursework in introduction to materials science, electronic materials, solid state physics, quantum mechanics and basic knowledge in computer programming or MATLAB.

ENMA614 Advanced Solid State Ionics (3 Credits)

Advanced solid state ionics is the higher level study of point defects in crystalline and non-crystalline solids; defect equilibria and transport; the influence of chemical and electric potentials, interfaces, and association; and the application of ionically conducting solids in solid-state electrochemical transducer systems and devices.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA 614 or ENMA 698W.

Formerly: ENMA 698W.

ENMA615 Advanced Archeology meets Technology (3 Credits)

Focus on the application of scientific methods of analysis to archaeological materials including bone, stone, pottery, and metal. Methods include absolute dating, remote sensing, optical and SEM microscopy, elemental and isotopic analysis. Laboratory sections provide hands-on experience with a variety of archaeological materials and analytical methods.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Recommended: Some knowledge of archaeology and archaeological methods, geology or chemistry is useful, but not required.

ENMA620 Polymer Physics (3 Credits)

The thermodynamics, structure, morphology and properties of polymers. Developing an understanding of the relationships between theory and observed behavior in polymeric materials.

Prerequisite: ENMA471; or permission of instructor.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA621 Advanced Design Composite Materials (3 Credits)

Fundamentals of design, processing, and selection of composite materials for structural applications are covered. The topics include a review of all classes of engineering materials, an in-depth analysis of micro and macro mechanical behavior including interactions at the two-phase interfaces, modeling of composite morphologies for optimal microstructures, material aspects, cost considerations, processing methods- including consideration of chemical reactions, stability of the interfaces and material selection.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA621 or ENMA698A.

Formerly: ENMA698A.

ENMA624 Radiation Engineering (3 Credits)

Ionizing radiation, radiation dosimetry and sensors, radiation processing, radiation effects on ; polymers, metals, semiconductors, liquid, and gas, radiation in advance manufacturing, radiation-physical technology.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA624 or ENMA698E.

Formerly: ENMA698E.

ENMA625 Biomaterials (3 Credits)

Examination of materials used in humans and other biological systems in terms of the relationships between structure, fundamental properties and functional behavior. Replacement materials such as implants, assistive devices such as insulin pumps and pacemakers, drug delivery systems, biosensors, engineered materials such as artificial skin and bone growth scaffolds, and biocompatibility will be covered.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA425, ENMA698I, BIOE698I, or ENBE453.

Formerly: ENMA698I.

ENMA626 Fundamentals of Failure Mechanisms (3 Credits)

Advanced failure mechanisms in reliability engineering will be taught from a basic materials and defects point of view. The methods of predicting the physics of failure of devices, materials, components and systems are reviewed. The main emphasis will be given to basic degradation mechanisms through understanding the physics, chemistry, and mechanics of such mechanisms. Mechanical failures are introduced through understanding fatigue, creep and yielding in materials, devices and components. The principles of cumulative damage and mechanical yielding theory are taught. The concepts of reliability growth, accelerated life testing, environmental testing are introduced. Physical, chemical and thermal related failures are introduced through a basic understanding of degradation mechanisms such as diffusion, electromigration, defects and defect migration. The failure mechanisms in basic material types will be taught. Failure mechanisms observed in real electronic devices and electronic packaging will also be presented. Problems related to manufacturing, and microelectronics will be analyzed. Mechanical failures are emphasized from the point of view of complex fatigue theory.

Cross-listed with: ENRE600.

Restriction: Permission of ENGR-Mechanical Engineering.

Credit Only Granted for: ENMA626, ENMA698M, ENMA698R, or ENRE600.

ENMA627 Nanotechnology Characterization (3 Credits)

Techniques to characterize the properties of materials whose characteristic dimensions are a few to a few hundred nanometers, including "conventional" nanocrystalline materials, but concentrating on "novel" nanomaterials: carbon nanotubes, quantum dots, quantum wires, and quantum wells will be covered. The emphasis is on recent results from the scientific literature concerning those properties that make nanostructures interesting: quantum effects, novel transport phenomena, enhanced mechanical properties associated with localization and with small crystalline size.

Credit Only Granted for: ENMA627 or ENME698T.

Formerly: ENMA698T.

ENMA630 Advanced Nanosized Materials: Synthesis and Utilization (3 Credits)

This course covers fundamental theory and fabrication-related aspects of nanoscale materials science. Topics: Quantization of energy level in solids and its effect on properties. Nucleation, growth and aging. Nano-epitaxy. Anisotropic crystal engineering. Electrical Transport. Nano-magnetism. Properties of carbon nanotubes. Applications in electronics, optics, data storage, energy and biomedicine.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA630 or ENMA6998G.

Formerly: ENMA698G.

ENMA631 Advanced Nanomechanics of Biomaterials (3 Credits)

Students will develop understanding of the latest scientific developments and discoveries in the nanoscale structure and properties of biological materials. Topics include nanostructures of biomaterials, physiological roles under mechanical forces, biopolymers, protein folding, and self-assembly. Also included are characterization methods of nanomechanical properties using single molecule techniques. Current applications of nanobiomaterials in the area of molecular machines, molecular self-assembly, and nanoscaffold are discussed.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA631 or ENMA698B.

Formerly: ENMA698B.

ENMA633 Advanced Characterization of Soft Matter Materials (3 Credits)

This course is focused on both the theories and experimental works of studying structure and dynamics of soft matter materials using scattering techniques (light, x-ray and neutron scattering). These scattering techniques can probe the structure from a few Angstrom to micrometer and the dynamics from picosecond to second, are thus widely used to reveal the structure-performance relationship of different materials. The course discusses the physics principles of these techniques and explains the details of general theories and commonly used models in characterizing soft matter materials such as polymer, protein, colloidal, thin film, and gel systems.

Cross-listed with: CHPH633.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA633 or CHPH633.

ENMA635 Wide Bandgap Materials and Devices (3 Credits)

Presents the materials science of wide bandgap materials and analyzes the defects present in such materials from a device performance point of view.

Jointly offered with: ENMA435.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA435 or ENMA635.

ENMA636 Introduction to Quantum Materials and Devices (3 Credits)

Quantum materials and devices are an emerging field in materials engineering and physics which offer new approaches to electronics and photonics. This course serves as an introduction to quantum materials and their applications in quantum technologies. It will teach concepts needed to understand the quantum mechanical properties of materials and connect their fundamental properties to quantum device applications. Topics will include low-dimensional materials, strongly correlated electron systems, topology in solids, and light-matter interactions.

Prerequisite: ENMA650 and ENMA660 .

Jointly offered with: ENMA436.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA436 or ENMA636.

ENMA637 Machine Learning for Materials Science (3 Credits)

Familiarizes students with basic as well as state of the art knowledge of machine learning and its applications to materials science and engineering. Covers the range of machine learning topics with applications including feature identification and extraction, determining predictive descriptors, uncertainty analysis, and identifying the most informative experiment to perform next. One focus of the class is to build the skills necessary for developing an autonomous materials research system, where machine learning controls experiment design, execution, and analysis in a closed-loop.

Prerequisite: MATH461.

Recommended: Python knowledge.

Jointly offered with: ENMA437.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA437, ENMA489L, or ENMA637.

ENMA640 Advanced Nano Processing of Materials with Plasma (3 Credits)

Plasmas are used to control the micro-and Nanoscale level structure of materials including patterning at the micro-and nanoscale level using plasma etching techniques. The course establishes the scientific understanding required for the efficient production of nano-structure using plasma techniques.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA440, ENMA489P, ENMA698P, or ENMA640.

Formerly: ENMA698P.

ENMA641 Nanotechnology Characterization (3 Credits)

Techniques to characterize the properties of materials whose characteristic dimensions are a few to a few hundred nanometers, including conventional nanocrystalline materials, but concentrating on novel nanomaterials: carbon nanotubes, quantum dots, quantum wires, and quantum wells are covered. The emphasis is on recent results from the scientific literature concerning those properties that make nanostructures interesting: quantum effects, novel transport phenomena, enhanced mechanical properties associated with localization and with small crystallite size.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA698T or ENMA641.

Formerly: ENMA698T.

ENMA642 Current Trends in Nanomaterials (3 Credits)

Presents a historical and contemporary perspective of the trends of development of nanomaterials. Having characteristic dimensions in the range of 1-100 nanometers, these materials are difficult to synthesize and characterize but are nevertheless at the forefront of science and technology in many fields. Through detailed analysis of the current literature, all students will develop a sense for not only where the science and technology has come but also where it is going.

Credit Only Granted for: ENMA642 or ENMA698N.

Formerly: ENMA698N.

ENMA643 Advanced Photonic Materials (3 Credits)

The understanding of the basic optical processes in photonic devices and systems composed of waveguides, light emitting diodes and lasers, as well as modulators is developed. Lectures on basic degradation mechanisms of such systems will be presented. The area of organic based LED reliability will be covered from the point of view of the stability of the organic-inorganic interface.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA698Z, ENRE648Z, or ENMA643.

Formerly: ENMA698Z.

ENMA645 Advanced Liquid Crystals and Other Monomeric Soft Matter Materials (3 Credits)

Elective course on the properties and behavior of liquid crystal and related soft materials, and their relationship to biomaterials and applications.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA650 Nanometer Structure of Materials (3 Credits)

The basic concepts required for understanding nanostructured materials and their behavior will be covered. Topics covered include the structural aspects of crystalline and amorphous solids and relationships to bonding types, point and space groups. Summary of diffraction theory and practice. The reciprocal lattice. Relationships of the microscopically measured properties to crystal symmetry. Structural aspects of defects in crystalline solids.

Prerequisite: ENMA460; or students who have taken courses with comparable content may contact the department. And permission of ENGR-Materials Science & Engineering department.

ENMA659 Special Topics in Electronic Materials (3 Credits)

Topics of current interest in the design and manufacture of electronic materials.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Repeatable to: 6 credits if content differs.

ENMA660 Thermodynamics in Materials Science (3 Credits)

Thermodynamics of engineering solids. Thermal, diffusional and mechanical interactions in macroscopic systems. Systems in thermal contact, systems in thermal and diffusive contact, systems in thermal and mechanical contact.

Corequisite: ENMA650.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA661 Kinetics of Reactions in Materials (3 Credits)

The theory of thermally activated processes in solids as applied to diffusion, nucleation and interface motion. Cooperative and diffusionless transformations. Applications selected from processes such as allotropic transformations, precipitation, martensite formation, solidification, ordering, and corrosion.

Prerequisite: ENMA660.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA662 Advanced Smart Materials (3 Credits)

This course will cover the three ferroic materials, ferromagnetic, ferroelectric, and ferroelastic (also known as Shape Memory Alloy, SMA) as well as materials that are simultaneously ferromagnetic and ferroelectric etc. Their similarities and differences will be identified and their atomic level and crystal structure examined. Phase transformations are very important and will be treated in some detail. Applications, e.g. permanent magnets, electronic magnetic materials, digital storage elements, actuators and sensors as well as SMAs for vision glasses, self-adjusting valves and the like will be covered.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA664 Advanced Environmental Effects on Engineering Materials (3 Credits)

Introduction to the phenomena associated with the resistance of materials to damage under severe environmental conditions. Oxidation, corrosion, stress corrosion, corrosion fatigue and radiation damage are examined from the point of view of mechanism and influence on the properties of materials. Methods of corrosion protection and criteria for selection of materials for use in radiation related environments.

Credit Only Granted for: ENMA664 or ENMA698K.

Formerly: ENMA698K.

ENMA669 Special Topics in the Chemical Physics of Materials (3 Credits)

Restriction: Permission of ENGR-Materials Science & Engineering department; and permission of instructor.

ENMA671 Defects in Materials (3 Credits)

Fundamental aspects of point (electronic and atomic) defects, dislocations, and surfaces and interfaces in materials. Defect interactions, defect models, and effects of zero, one and two dimensional defects on material behavior.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA674 Advanced Computational Materials Science (3 Credits)

An introduction for beginning graduate students to study atomistic modeling and simulation techniques that are used in materials science. Theories and applications of atomistic scale modeling techniques to simulate, understand, and predict the properties of materials will be covered. Topics include: molecular statics, quantum mechanical methods, molecular dynamics simulations and Monte Carlo simulations.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA674 or ENMA 698A.

Formerly: ENMA698A.

ENMA679 Special Topics in the Mechanical Behavior of Materials (3 Credits)

Topics of current interest in the mechanical behavior of materials.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA680 Determination of Structure, Chemical Composition and Defects in Materials (3 Credits)

Basic principles of electron microscopy theory, electron diffraction, and imaging theory. The electron beam sample interaction that gives rise to different signals is related to the structural and compositional information that is obtained from a sample using a TEM. The most common TEM techniques for structural characterization of a sample, namely, electron diffraction, bright/dark field imaging, and high resolution lattice imaging are discussed. Compositional information obtained from x-ray fluorescence and electron energy loss as well as the resolution of these techniques is also covered. A description of techniques used to study magnetic materials is also presented.

Prerequisite: ENMA650.

Restriction: Permission of ENGR-Materials Science & Engineering department.

ENMA681 Diffraction Techniques in Materials Science (3 Credits)

Advanced methods of x-ray scattering/diffraction available thanks to the more powerful sources available to us. The availability of these sources enables us to study liquid crystals, polymers, nanomaterials, quasiorganized materials (including nano) and disordered materials. We will consider scattering/diffraction from the electronic level and build up to the molecular level.

Prerequisite: Permission of ENGR-Materials Science & Engineering department.

ENMA682 Electron Microscopy for Research (3 Credits)

An overview of the basic principles of operation for modern electron microscopes and how they are used in modern research. Details will be given on the construction of microscopes, their basic operation, and the types of questions that can be addressed with an electron microscope. Emphasis will be placed on a conceptual understanding of the underlying theories, and how to apply these to real-world research problems. Independent study into a specific area of electron microscopy will contribute to a term paper. Upon completion of this course, student will be expected to have a basic understanding sufficient to give interpretations of microscopy images and to suggest the correct tool or approach for certain research studies.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA682 or ENMA698J.

Formerly: ENMA698J.

ENMA683 Structural Determination Laboratory (1 Credit)

The operation of an electron microscope is covered. TEM techniques that are used to characterize the structure, defects and composition of a sample are presented and used to study a variety of materials. These techniques are: electron diffraction patterns, bright/dark field imaging, high resolution lattice imaging and energy dispersive x-ray spectroscopy. Also covers different sample preparation techniques for TEM. The goal is that the students become independent users of the TEM.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA698L or ENMA683.

Formerly: ENMA698L.

ENMA684 Advanced Finite Element Modeling (3 Credits)

A brief review of mechanical behavior of materials, introduction to Finite Element Modeling (FEM), and procedures for predicting mechanical behavior of materials by FEM using computer software (at present ANSYS). The FEM procedures include, setting up the model, mesh generation, data input and interpretation of the results.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Credit Only Granted for: ENMA684 or ENMA698I.

Formerly: ENMA698I.

ENMA685 Advanced Electrical and Optical Materials (3 Credits)

Students become familiar with basic and state of the art knowledge of some technologically relevant topics in materials engineering and applied physics, including dielectric/ferroelectric materials, magnetic materials, superconductors, multiferroic materials and optical materials with an underlying emphasis on the thin film and device fabrication technology. Fundamental physical properties and descriptions of different materials and their applications are included. Discussion will include new developments in the fields.

Credit Only Granted for: ENMA685 or ENMA698F.

Formerly: ENMA698F.

ENMA687 Nanoscale Photonics and Applications (3 Credits)

Advanced topics in photonics including optical ray propagation, LEDs and the interaction of light in nanostructured materials for optoelectronic applications will be covered.

Credit Only Granted for: ENMA687 or ENMA698Z.

Formerly: ENMA698Z.

ENMA688 Seminar in Materials Science and Engineering (1 Credit)

Current research in materials science and engineering and related fields.

Restriction: Must be in Engineering: Materials Science program.

Repeatable to: 4 credits if content differs.

Formerly: ENMA697.

ENMA689 Special Topics in Engineering Materials (3 Credits)

Restriction: Permission of instructor; and permission of ENGR-Materials Science & Engineering department.

Repeatable to: 6 credits if content differs.

Formerly: ENMA691.

ENMA698 Special Problems in Materials Science and Engineering (1-3 Credits)

Individual, supervised study in materials science and engineering.

Restriction: Permission of ENGR-Materials Science & Engineering department.

Repeatable to: 6 credits if content differs.

ENMA797 Independent Study (3 Credits)

This course is designed to provide students with a directed independent study course in order to prepare the scholarly paper required for the master's degree without thesis degree option.

ENMA799 Master's Thesis Research (1-6 Credits)**ENMA808 Advanced Topics in Engineering Materials (3 Credits)**

Restriction: Permission of ENGR-Materials Science & Engineering department.

Repeatable to: 6 credits if content differs.

ENMA898 Pre-Candidacy Research (1-8 Credits)**ENMA899 Doctoral Dissertation Research (1-8 Credits)**

ENME - Engineering, Mechanical

ENME400 Machine Design (3 Credits)

Design of mechanical elements and planar machines. Failure theories. Design of pressure vessels, joints, rotating elements, and transmission elements. Kinematic structures, graphical, analytical, and numerical analysis and synthesis of linkages, gear trains, and flywheels are covered.

Prerequisite: Must have completed or be concurrently enrolled in ENME361.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME401 Entrepreneurial Design Realization (3 Credits)

The vision for this course, and an aspect that makes it unique, is to expose students to the opportunities and challenges of bringing a product design to reality (entrepreneurship). The emphasis is on environmentally and socially sustainable projects. The end-product of this course will be full-scale implementations or complete design "packages" that can be taken to potential stakeholders.

Cross-listed with: ENES401.

Restriction: Must have senior standing and permission of instructor.

Credit Only Granted for: ENME401, ENME489B or ENES401.

Formerly: ENME489B.

ENME406 Roller Coaster Engineering (3 Credits)

Engineering of roller coasters including: specifications, concept creation, structural design, car design, and safety. Course covers biomechanics and rider kinematics as well as manufacturing aspects.

Prerequisite: ENES220, ENES221, and ENME272. And ENME202; or MATH206.

Corequisite: ENME400.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME407 Sustainability, Climate Change and Renewable Energy Systems (3 Credits)

Countries around the world are developing innovative and sustainable solutions that not only help to protect the environment from the threats of global climate change, but that also can improve human health and quality of life. In this course students will explore solutions to climate change, as well as geothermal and hydroelectric energy systems and their applications.

Prerequisite: PHYS260; or permission of ENGR-Mechanical Engineering department.

Restriction: Students must have completed a minimum of 60 credits by the time they will enroll in this course.

ENME408 Selected Topics in Engineering Design (3 Credits)

Creativity and innovation in design. Generalized performance analysis, reliability and optimization as applied to the design of components and engineering systems. Use of computers in design of multivariable systems.

Restriction: Must be in Engineering: Mechanical program; and senior standing. Or permission of ENGR-Mechanical Engineering department.

Repeatable to: 6 credits if content differs.

ENME410 Design Optimization (3 Credits)

Introduction to the formal process of design optimization, including analytical and computational methods. Step by step design optimization techniques. Design optimization concepts, necessary and sufficient optimality conditions and solution techniques. Solution evaluation and tradeoff exploration.

Prerequisite: ENME271; or MATH206.

Restriction: Permission of ENGR-Mechanical Engineering department; and junior or senior standing.

ENME413 Bio-Inspired Robotics (3 Credits)

Fundamentals and applications of biologically inspired robots, traditional robots, and design and fabrication of biologically inspired robots.

Prerequisite: Must have completed or be concurrently enrolled in ENME351.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME413 or ENME489L.

Formerly: ENME489L.

ENME416 Additive Manufacturing (3 Credits)

Develop a comprehensive understanding of fundamental additive manufacturing, 3D printing approaches, including: extrusion-based deposition, stereolithography, powder bed-based melting, and inkjet-based deposition. Cultivate a design for-additive manufacturing skillset for CAD and CAM methodologies to produce successful 3D prints. Fabricate 3D mechanical objects using a variety of 3D printing technologies on campus. Execute a design project that demonstrates how additive manufacturing technologies can overcome critical limitations of traditional manufacturing processes.

Prerequisite: ENME331. And ENME272; or ENME414.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME417 Numerical Methods in Engineering (3 Credits)

Covers the fundamental aspects of how to apply analytical mathematical concepts to discrete data. The course is aimed at graduate students and senior undergraduate students in any area of engineering, and treats the material in a general manner that is not specific to any application or field of specialization.

Recommended: Senior standing.

Jointly offered with: ENME745.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME745, ENME808B, ENME417 or ENME489J.

Formerly: ENME489J.

ENME420 Energy Audit for Decarbonization and Sustainability Enhancement (3 Credits)

Provides students with fundamentals and applications of de-carbonization of building systems for energy sustainability through energy audit and efficiency measures, renewable energy, and electrification. Topics covered include societal and economic motivations for de-carbonization of buildings; building energy auditing and energy consumption analysis; lighting systems and controls; heating/cooling and ventilation systems; integrated building automation systems; fundamentals of renewable energy for building applications; fundamentals of building electrification and energy storage devices; emerging technologies for building energy sustainability.

Prerequisite: ENES232 .

Corequisite: ENME332.

Restriction: Permission of the department.

Credit Only Granted for: ENME420 or ENME489I.

Formerly: ENME489I.

ENME421 Engineering Design Ideation (3 Credits)

Engineering Design Methods is a technical elective for engineering students who wish to improve their ability to produce design ideas (i.e., the ideation process) for further development into conceptual ideas. Ideation is the creative, idea generation activity that happens at the beginning of the conceptual design process. Ideation methods are often built around creativity improving strategies and are often designed for individual use prior to presenting the results in a team setting.

Prerequisite: Must have completed or be concurrently enrolled in ENME371.

Restriction: Junior standing or higher.

Additional Information: Ideally, this course should be taken prior to capstone design.

ENME422 Indoor Environment and Mechanical Systems (3 Credits)

Fundamentals of indoor air quality and its measurements. Exploration of air cleaning technologies for gaseous, particulate and infectious agent contaminants. Simulations of air flow and contaminants with multi-zone models to allow testing of both contaminant dispersion in buildings and effectiveness of air cleaning technologies.

Prerequisite: ENES232 and ENME332.

Jointly offered with: ENME753.

Credit Only Granted for: ENME422 or ENME753.

ENME423 Modern Climate Control and Building Energy Design/Analysis (3 Credits)

Fundamentals and design calculations of heat and moisture transfer in buildings; evaluation of cooling, heating and power requirements of buildings; building energy consumption simulations, use of alternative energy and energy conservation measures in buildings; fundamentals of fans/pumps and air/water distribution in buildings; introduction to refrigeration and energy systems for data centers and other mission-critical facilities.

Prerequisite: ENES232.

Corequisite: ENME332.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME424 Urban Microclimate and Energy (3 Credits)

Urban microclimate from the perspective of transient heat and mass transfer using building energy simulations for building clusters as well as LEED building certification criteria. The focus is on understanding building energy consumption and environmental impacts from the individual building scale to a neighborhood scale.

Prerequisite: ENES232; and must have completed or be concurrently enrolled in ENME332 .

Jointly offered with: ENME742.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME424 or ENME742.

ENME425 Energy Conversion Systems for Sustainability (3 Credits)

Focus on energy sustainability with view on changing global energy availability and use. Addresses the objective of greatly reducing our dependence on the finite amounts of fossil energy sources available for our quest to achieve environmentally benign sustainable energy for green environment. The emphasis will be on sustainability issues, discussion on supply, demand and storage, energy transmission, global warming and carbon management, biomass-resources, uses and production of biofuels, national energy policy discussion, carbon emission, energy security and economics to ensure future energy needs can be met without compromising the ability of future generation to meet their own needs with due considerations to increase in global temperatures.

Prerequisite: ENES232.

Restriction: Permission of the Mechanical Engineering Department.

Credit Only Granted for: ENME489X or ENME425.

Formerly: ENME489X.

ENME426 Production Management (3 Credits)

The basic concepts and models needed to understand and design manufacturing systems, including the history of manufacturing, performance measures, queuing systems, variability, production planning and scheduling, lean manufacturing, and pull production control.

Credit Only Granted for: BMGT385 or ENME426.

ENME427 CSI Mechanical: Finding Reasons for Compromised Structural Integrity (3 Credits)

Understanding the causes of product failures including the political, societal, economic, environmental, and ethical impact of these failures, and the strategies to avoid, postpone, or mitigate them. Students will be encouraged to combine concepts from engineering, natural sciences, social sciences, and the humanities to address these complex issues. Basics of failure analysis, forensics, and reliability engineering and the scientific fundamentals underlying the most common types of failure. Issues of legal liability. Methods for monitoring the existing condition of a structure.

Prerequisite: ENES220 and ENME382.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME430 Fundamentals of Nuclear Reactor Engineering (3 Credits)

Fundamental aspects of nuclear physics and nuclear engineering, including nuclear interactions; various types of radiation and their effects on materials and humans; and basic reactor physics topics, including simplified theory of reactor critically.

Prerequisite: MATH246.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME431 Nuclear Reactor Systems and Safety (3 Credits)

Engineering, material and thermal aspects of light water reactors, fast reactors, high temperature gas reactors, heavy water moderated reactors, breeder reactors, advanced reactors including GEN IV designs. Evolution of light water reactor safety and regulation in the US that has culminated in the current body of regulations.

Prerequisite: MATH246.

Recommended: ENME430.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME432 Reactor and Radiation Measurements Laboratory (3 Credits)

Basics concepts of nuclear radiation and radiation detectors including types of radiation, radioactive decay, and interactions of radiation with matter.

Prerequisite: ENME430 and MATH246.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME433 Nuclear Reactor Design (3 Credits)

Principles of nuclear reactor engineering including nuclear reactor system design, materials, thermal-hydraulics, shielding, mechanical design, and safety analysis.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME433 or ENME489T.

Formerly: ENME489T.

ENME434 Engineering Quantum Systems and Sensors (3 Credits)

Designed for students interested in learning quantum mechanics from a technological perspective, illustrated through specific examples from quantum engineering at the nanoscale and from discrete quantum systems. The focus is not on textbook examples such as hydrogen atom solutions and angular momentum algebra. Instead, focus areas would be quantum sensors and systems, description and control of quantum noise, which should elicit particular appeal across many areas of engineering and physical sciences. The course will prepare students for emerging quantum technologies besides computing and cryptography that are part of the Quantum 2.0 revolution.

Prerequisite: PHYS270 and MATH141.

Recommended: Any MATH 240, MATH 461, MATH341, or ENEE290 or equivalent courses covering linear algebra, eigenvalues, and eigenvectors.

Jointly offered with: ENME692.

Restriction: Permission of Mechanical Engineering department.

Credit Only Granted for: ENME434 or ENME692.

ENME435 Remote Sensing Instrumentation (3 Credits)

Explores the fundamentals of remote sensing techniques including light detection and ranging (lidar), radar, and computer vision in the context of emerging technologies such as autonomous navigation, terrain modeling, and embedded smart devices.

Prerequisite: ENME351.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME435 or ENME489Y.

Formerly: ENME489Y.

ENME436 Renewable Energy (3 Credits)

Fundamentals, design/analysis tools, and state of the art renewable energy technologies. Energy resources and global perspectives of current and future energy demand/consumption trends, followed by prime renewable energy technologies, including wind, solar, hydro, geothermal, and ocean thermal energy conversion. Economics of renewable energy, energy conservation opportunities, CO2 capture and storage, and thermal energy storage.

Prerequisite: ENME331.

Restriction: Must be in a major within the ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME489K or ENME436.

Formerly: ENME489K.

ENME440 Applied Machine Learning for Engineering and Design (3 Credits)

Learn how to apply techniques from Artificial Intelligence and Machine Learning to solve engineering problems and design new products or systems. Design and build a personal or research project that demonstrates how computational learning algorithms can solve difficult tasks in areas you are interested in. Master how to interpret and transfer state-of-the-art techniques from computer science to practical engineering situations and make smart implementation decisions.

Prerequisite: ENME392; or permission of instructor.

Jointly offered with: ENME743.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME440 or ENME743.

ENME441 Mechatronics and the Internet of Things (3 Credits)

Mechatronics and the Internet of Things combines sensors, actuators, computation, and communication to realize integrated objects capable of robust Internet-based interfacing. Students will gain experience with circuit development, mechatronic systems, MicroPython coding, and Internet communication protocols using the ESP32 microcontroller platform. The project-focused course combines lectures and hands-on labs to drive learning at the convergence of mechanics, electronics, and software domains for IoT smart object development.

Prerequisite: ENME351.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME489B or ENME441.

Formerly: ENME489B.

ENME442 Information Security (3 Credits)

The materials presented are divided into three major components: overview, detailed concepts and implementation techniques. The topics to be covered are: general security concerns and concepts from both a technical and management point of view, principles of security, architectures, access control and multi-level security, trojan horses, covert channels, trap doors, hardware security mechanism, security models, security kernels, formal specifications and verification, networks and distribution systems and risk analysis.

Restriction: Must have Senior standing in engineering; and permission of ENGR-Mechanical Engineering department. Jointly offered with ENRE684 .

Credit Only Granted for: ENRE648J, ENME442, ENRE684, or ENPM808E.

ENME444 Assistive Robotics (3 Credits)

Fundamentals of assistive robots used in a wide variety of ways to help humans with disabilities. Three application areas will be covered: (1) Rehabilitation robotics to recover motor function from neurologic injuries such as stroke, (2) Prosthetics to enable mobility function in amputees, and (3) Social robotics for cognitive impairment and developmental disorders such as autism. Theory behind different control systems employed by assistive robotics, as well as the mechanical design, sensors & actuators, and user interfaces behind representative robots in the respective areas. Guidelines for designing assistive robots. Ethical and regulatory considerations in the design of assistive robots.

Prerequisite: ENME351; and must have completed or be concurrently enrolled in ENME462.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME445 Design for Reliability (3 Credits)

Failure prevention, accident prevention, design requirements analysis, designing right the first time, high system reliability, software reliability, manufacturing defect prevention, life cycle costs reduction, design reviews, managing the design for reliability, design trustworthiness, product durability, and writing good specifications are covered.

Restriction: Junior standing or higher.

ENME446 Medical Robotics (3 Credits)

The fundamentals of robot design, control and different areas of research regarding development are explored. Student will engage in a course project where they will learn to develop, build, and control a medical robot. Surgical robotics development and modeling of robotic systems, safety in medical robotics, haptics, ergonomics and surgery. Fundamentals of robot design and control. Kinematics. This proposal was approved through the Testudo Curriculum Management system.

Prerequisite: Must have completed or be concurrently enrolled in ENME361.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME489C, ENME808M or ENME446.

Formerly: ENME489C.

ENME454 Vehicle Dynamics (3 Credits)

The fundamentals of passenger vehicle and light truck design and vehicle dynamics are covered. The engineering principles associated with acceleration, braking, handling, ride quality, aerodynamics, and tire mechanics are discussed, as well as suspension and steering design.

Corequisite: ENME361.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME461 Control Systems Laboratory (3 Credits)

Students will design, implement, and test controllers for a variety of systems. This will enhance their understanding of feedback control familiarize them with the characteristics and limitations of real control devices. Students will also complete a small project. This will entail writing a proposal, purchasing parts for their controller, building the system, testing it, and writing a final report describing what they have done.

Prerequisite: ENME351 and ENME361.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENEE461 or ENME461.

ENME462 Vibrations, Controls, and Optimization II (3 Credits)

Continuation of ENME361. Fundamentals of vibration, controls, and optimization. Analysis and design in time, Laplace and frequency domains. Mathematical descriptions of system response, system stability, control and optimization. Optimal design of mechanical systems.

Prerequisite: ENME361.

Restriction: Permission of the Mechanical Engineering Department.

ENME464 Cost Analysis for Engineers (3 Credits)

An introduction to the financial and cost analysis aspects of product engineering. Introduces key elements of traditional engineering economics including interest, present worth, depreciation, taxes, inflation, financial statement analysis, and return on investment. Provides an introduction to cost modeling as it applies to product manufacturing and support. Cost modeling topics will include: manufacturing cost analysis, life-cycle cost modeling (reliability and warranty), and cost of ownership.

Prerequisite: ENME392; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME465 Probability-Based Design (3 Credits)

Review of probabilistic distributions, introduction to pseudo-random number generation, and algorithms to produce probability distributions using Monte Carlo simulation via Matlab and other approaches to best design probabilistic engineering problems.

Prerequisite: MATH206 and ENME392.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME466 Lean Six Sigma (3 Credits)

This course intends to provide in-depth understanding of Lean Six Sigma and its Define - Measure - Analyze - Improve - Control (DMAIC) Breakthrough Improvement Strategy. The emphasis is placed on the DMAIC process which is reinforced via application of semester long corporate projects and case study analysis.

Corequisite: ENME392; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of ENGR-Mechanical Engineering department.

ENME467 Engineering for Social Change (3 Credits)

Critical analysis of issues at the intersection of engineering, philanthropy and social change. How engineering design, products and processes have created social change in the past and will do so in the future through both intended and unintended consequences. Topics covered include energy, sustainability and climate change, autonomy, the digital future, low cost engineering, manufacturing, philanthropy, ethics and the impact of electronics on society, among others. Faculty and external experts will engage with students on these topics. Students will broadly engage with organizations involved in using technology for positive social impact.

Cross-listed with: ENES467.

Restriction: Must not be in Engineering: Mechanical program; and junior standing or higher; and must be in a major in ENGR-A. James Clark School of Engineering.

Credit Only Granted for: ENES467 or ENME467.

ENME470 Finite Element Analysis (3 Credits)

Basic concepts of the theory of the finite element method. Applications in solid mechanics and heat transfer.

Restriction: Senior standing; and permission of ENGR-Mechanical Engineering department.

ENME472 Integrated Product and Process Development (3 Credits)

Integration of product development with the development process. Design strategies. Product architecture. Design for manufacturing. Selection of materials. Design for assembly.

Prerequisite: ENME331, ENME361, ENME351, and ENME371; and must have completed or be concurrently enrolled in ENME332.

Restriction: Permission of the Department of Mechanical Engineering.

ENME473 Mechanical Fundamentals of Electronic Systems (3 Credits)

An understanding of the fundamental mechanical principles used in design of electronic devices and their integration into electronic systems will be provided. Focus will be placed on the effect of materials compatibility, thermal stress, mechanical stress, and environmental exposure on product performance, durability and cost. Both electronic devices and package assemblies will be considered. Analysis of package assemblies to understand thermal and mechanical stress effects will be emphasized through student projects.

Prerequisite: ENME351.

Jointly offered with: ENME690.

Restriction: Permission of the Department of Mechanical Engineering.

Credit Only Granted for: ENME473 or ENME690.

ENME476 Microelectromechanical Systems (MEMS) I (3 Credits)

Fundamentals of microelectromechanical systems (MEMS). Introduction to transducers and markets. MEMS fabrication processes and materials, including bulk micromachining, wet etching, dry etching, surface micromachining, sacrificial layers, film deposition, bonding, and non-traditional micromachining. Introduction to the relevant solid state physics, including crystal lattices, band structure, semiconductors, and doping. The laboratory covers safety, photolithography, profilometry, wet etching.

Restriction: Senior standing.

Credit Only Granted for: ENME476 or ENME489F.

Formerly: ENME489F.

ENME477 Microelectromechanical Systems (MEMS) II (3 Credits)

Fabrication of devices designed in MEMS I, including everything from mask printing through training on state-of-the-art fabrication equipment through device testing. In-depth understanding of MEMS devices and technologies, such as mechanical and electromagnetic transducers, microfluidics, and chemical sensors.

Prerequisite: ENME476.

ENME479 Selected Topics in Mechanical Engineering (1-3 Credits)

Covers current topics in mechanical engineering and related fields.

Restriction: Permission of the Department of Mechanical Engineering.

Repeatable to: 6 credits if content differs.

ENME480 Introduction to Robotics (3 Credits)

An introductory course in robotics that will educate students in the elementary concepts of robotics. The course will encompass both theory and experiments.

Prerequisite: MATH246 or ENES221; and (CMSC131, ENME202, ENAE202 or ENEE150).

Restriction: Must be in the Robotics and Autonomous Systems minor; or Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME480 or ENMT380.

ENME483 Physics of Turbulent Flow (3 Credits)

Specific problems of turbulent flow including automobile and truck aerodynamics and canonical flows including pipes, jets and boundary layers that are measured and simulated to gain basic understanding of turbulence. A goal of the course is to impart the necessary background for students to be able to critically assess and most effectively employ the turbulent flow prediction codes (e.g. Fluent) that are a mainstay of how turbulence is analyzed in modern industries.

Prerequisite: ENME331.

Restriction: Permission of ENGR-Mechanical Engineering department.

Jointly offered with ENME656. Credit only granted for: ENME483 or ENME656.

ENME484 Analysis of Turbulent Flow (3 Credits)

Relentless growth in the speed and size of supercomputers has encouraged the ever expanding use of numerical simulation in the practice of fluids engineering. For the flow past ground vehicles, in the urban grid, re-entering rockets, helicopters landing on ships at sea and countless other examples, the flow is turbulent, and simulation is becoming or will one day become the methodology of choice in analyzing and designing such technologies. The goal of this course is to give an introduction to the analysis of turbulent flow via simulation and the modeling that is used in its development. Among the questions to be considered: What can one hope to learn from flow simulation? What are the strengths of the approach and what obstacles inhibit its application? What kind of physical considerations are required in setting up simulations? How does one analyze the results of a simulation?

Prerequisite: ENME331.

Jointly offered with: ENME657.

Restriction: Permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME484 or ENME657.

ENME486 Computational Modeling, Simulation, and Interactive Visualization (3 Credits)

Creation of interactive graphic displays from the numerical simulation of mechanical engineering models. Brief description of each model provided, along with varied parameters to explore models' characteristics. Conclusions drawn from use of each interactive graphic. Mathematica language introduced and interwoven with the numerical simulation of the models, which will include: robotics and mechanisms, static response of beams, control systems, measurement systems, fluid flow, vibrations, geometric modeling, finite element analysis, and nonlinear phenomena.

Restriction: Senior standing; and permission of ENGR-Mechanical Engineering department.

ENME488 Special Problems (3 Credits)

Advanced problems in mechanical engineering with special emphasis on mathematical and experimental methods.

Restriction: Permission of ENGR-Mechanical Engineering department.

Repeatable to: 6 credits if content differs.

ENME489 Special Topics in Mechanical Engineering (3 Credits)

Selected topics of current importance in mechanical engineering.

Restriction: Permission of ENGR-Mechanical Engineering department.

Repeatable to: 6 credits.

ENME600 Engineering Design Methods (3 Credits)

An introductory graduate level course in critical thinking about formal methods for design in Mechanical Engineering. Course participants gain background on these methods and the creative potential each offers to designers. Participants will formulate, present, and discuss their own opinions on the value and appropriate use of design materials for mechanical engineering.

ENME605 Advanced Systems Control (3 Credits)

Modern control theory for both continuous and discrete systems. State space representation is reviewed and the concepts of controllability and observability are discussed. Design methods of deterministic observers are presented and optimal control theory is formulated. Control techniques for modifying system characteristics are discussed.

Prerequisite: ENME462; or permission of instructor.

ENME607 Engineering Decision Making and Risk Management (3 Credits)

Individual decision-making, group decisionmaking, and organizations of decision-makers in the context of engineering design, project management, and other functions. Techniques for making better decisions, for understanding how decisions are related to each other, and for managing risk. Cross-listed with ENRE671.

Credit Only Granted for: ENME808X, ENRE671 or ENME607.

Formerly: ENME 808X.

ENME610 Engineering Optimization (3 Credits)

Overview of applied single- and multi- objective optimization and decision making concepts and techniques with applications in engineering design and/or manufacturing problems. Topics include formulation examples, concepts, optimality conditions, unconstrained/constrained methods, and post-optimality sensitivity analysis. Students are expected to work on a semester-long real-world multi-objective engineering project.

ENME625 Multidisciplinary Optimization (3 Credits)

Overview of single- and multi-level design optimization concepts and techniques with emphasis on multidisciplinary engineering design problems. Topics include single and multilevel optimality conditions, hierarchic and nonhierarchic modes and multilevel post optimality sensitivity analysis. Students are expected to work on a semester-long project.

ENME631 Advanced Conduction and Radiation Heat Transfer (3 Credits)

Theory of conduction and radiation. Diffused and directional, poly- and mono-chromatic sources. Quantitative optics. Radiation in enclosures. Participating media. Integrodifferential equations. Multidimensional, transient and steady-state conduction. Phase change. Coordinate system transformations.

Prerequisite: ENME332; or students who have taken courses with comparable content may contact the department; or permission of instructor.

ENME632 Advanced Convection Heat Transfer (3 Credits)

Statement of conservation of mass, momentum and energy. Laminar and turbulent heat transfer in ducts, separated flows, and natural convection. Heat and mass transfer in laminar boundary layers. Nucleate boiling, film boiling, Leidenfrost transition and critical heat flux. Interfacial phase change processes; evaporation, condensation, industrial applications such as cooling towers, condensers. Heat exchangers design.

Credit Only Granted for: ENNU615 or ENME632.

ENME633 Molecular Thermodynamics (3 Credits)

An examination of the interactions between molecules, which govern thermodynamics relevant to engineering, will be conducted. We will investigate both classical and statistical approaches to thermodynamics for understanding topics such as phase change, wetting of surfaces, chemical reactions, adsorption, and electrochemical processes. Statistical approaches and molecular simulation tools will be studied to understand how molecular analysis can be translated to macroscopic phenomena.

ENME635 Energy Systems Analysis for Sustainability and Decarbonization (3 Credits)

Methods for the analysis of conventional and novel energy systems are taught throughout the course. Additional topics are, using the US National Energy Flow Chart to understand sources of carbon emissions, discussion of energy efficiency improvement methods, discussion of decarbonization and carbon capture and sequestration approaches and their impact on efficiency and emissions.

Prerequisite: Undergraduate thermodynamics course or permission of the instructor.

Credit Only Granted for: ENPM635 or ENME635.

ENME640 Fundamentals of Fluid Mechanics (3 Credits)

Equations governing the conservation of mass, momentum, vorticity and energy in fluid flows. Low Reynolds number flows. Boundary layers. The equations are illustrated by analyzing a number of simple flows. Emphasis is placed on physical understanding to facilitate the study of advanced topics in fluid mechanics.

Prerequisite: Must have completed partial differential equations at the level of MATH 462; or permission of ENGR-Mechanical Engineering department.

Formerly: ENME651.

ENME641 Viscous Flow (3 Credits)

Fluid flows where viscous effects play a significant role. Examples of steady and unsteady flows with exact solutions to the Navier-Stokes equations. Boundary layer theory. Stability of laminar flows and their transition to turbulence.

Prerequisite: ENME640; or students who have taken courses with comparable content may contact the department; or permission of instructor.

Formerly: ENME652.

ENME642 Hydrodynamics I (3 Credits)

Exposition of classical and current methods used in analysis of inviscid, incompressible flows.

Prerequisite: ENME640; or students who have taken courses with comparable content may contact the department; or permission of instructor.

Formerly: ENME653.

ENME645 Fluid-Structure Interactions (3 Credits)

Fundamentals of fluid-structure interactions, fluid-elastic instabilities (buckling, flutter, galloping) and their engineering applications. Possible domains of applications are civil engineering, aerospace engineering, ocean engineering, biomechanics, and soft robotics. Examples include tall bridges, aircraft wing, parachutes, solid rocket motor, turbomachinery, offshore platform, subsea pipelines, paper printing, MEMS microchannels, blood flow in arteries, and heart valves. The fish swimming mechanics will be studied to inspire novel efficient propulsion mechanisms for soft robotics applications.

Prerequisite: ENME331 and ENME361.

Restriction: Must be a student in the Clark School of Engineering.

Credit Only Granted for: ENME498U, ENME645 or ENME809C.

Formerly: ENME809C.

ENME646 Computational Fluid Dynamics (3 Credits)

Fundamentals of numerical analysis of engineers. Inversion of large, sparse matrices. Numerical solution of the incompressible Navier-Stokes equations in Cartesian and curvilinear grids. Application to turbulent flows and micro-fluidics.

Prerequisite: Must have completed graduate-level fluid mechanics; or permission of instructor.

ENME647 Multiphase Flow and Heat Transfer (3 Credits)

Boiling and condensation in stationary systems, phase change heat transfer phenomenology, analysis and correlations. Fundamentals of two-phase flow natural circulation in thermal hydraulic multi-loop systems with applications to nuclear reactors safety. Multiphase flow fundamentals. Critical flow rates. Convective boiling and condensation. Multiphase flow and heat transfer applications in power and process industries.

ENME656 Theory and Modeling of Wall-Bounded Turbulent Flows (3 Credits)

Provides an introduction to turbulence with a specific focus on turbulent flows near solid boundaries in both external and internal flows. The course will cover both incompressible and compressible flows, and will introduce both theory and modeling approaches. The course will also include a more applied component where students will use Computational Fluid Dynamics software to analyze some representative flows

Prerequisite: ENME 331 or equivalent; or permission of instructor.

ENME662 Linear Vibrations (3 Credits)

Development of equations governing small oscillations and spatially continuous systems. Newton's equations, Hamilton's principle, and Lagrange's equations. Free and forced vibrations of mechanical systems. Modal analysis. Finite element discretization and reductions of continuous systems. Numerical methods. Random vibrations.

ENME664 Dynamics (3 Credits)

Kinematics in plane and space; Dynamics of particle, system of particles, and rigid bodies. Holonomic and non-holonomic constraints. Newton's equations, D'Alembert's principle, Hamilton's principle, and equations of Lagrange. Impact and collisions. Stability of equilibria.

Prerequisite: ENES221; or students who have taken courses with comparable content may contact the department; or permission of instructor.

ENME665 Nonlinear Oscillations (3 Credits)

Nonlinear oscillations and dynamics of mechanical and structural systems. Classical methods, geometrical, computational and analytical methods. Bifurcations of equilibrium and periodic solutions; chaos.

Prerequisite: ENME662 and ENME 700; or equivalent.

ENME670 Continuum Mechanics (3 Credits)

Mechanics of deformable bodies, finite deformation and strain measures, kinematics of continua and global and local balance laws. Thermodynamics of continua, first and second laws. Introduction to constitutive theory for elastic solids, viscous fluids and memory dependent materials. Examples of exact solutions for linear and hyper elastic solids and Stokesian fluids.

ENME672 Composite Materials (3 Credits)

Micromechanics of advanced composites with passive and active reinforcements, mathematical models and engineering implications, effective properties and damage mechanics, recent advances in "adaptive" or "smart" composites.

ENME674 Finite Element Methods (3 Credits)

Theory and application of finite element methods for mechanical engineering problems such as stress analysis. Basic development of the method for solving the types of governing partial differential equations that are the foundations for many engineering and physical sciences. The emphasis is on balancing the theoretical/mathematical background with a computable implementation to reach applications. Some code writing and debugging will be involved. This class is suited for graduate students or high-achieving undergraduates in engineering, mathematics, or the physical sciences. A very basic knowledge of matrix-vector calculations and multivariable calculus are required. Some exposure to partial differential equations and experience with Matlab or a compiled language will be helpful but are not required.

Restriction: Must be in one of the following programs (ENGR: MS/PhDMechanical Engineering (Master's); ENGR: MS/PhDMechanical Engineering (Doctoral); ENGR: MS/PhDReliability Engineering (Master's); ENGR: MS/PhDReliability Engineering (Doctoral); or permission of ENGR-Mechanical Engineering department.

Credit Only Granted for: ENME 674, ENAE652, ENPM652 or ENPM808F.

ENME675 A Mathematical Introduction to Robotics (3 Credits)

Designed to provide graduate students with some of the concepts in robotics from a mathematical viewpoint, including introduction to group theory and basics of SO(3) and SE(3) group applied to robotics; rigid body motion; manipulator kinematics; introduction to holonomic & non-holonomic constraints; dynamics of robot manipulators.

Credit Only Granted for: ENME675 or ENME808V.

Formerly: ENME808V.

ENME684 Modeling Material Behavior (3 Credits)

Constitutive equations for the response of solids to loads, heat, etc. based on the balance laws, frame invariance, and the application of thermodynamics to solids. Non-linear elasticity with heat conduction and dissipation. Linear and non-linear non-isothermal viscoelasticity with the elastic-viscoelastic correspondence principle. Classical plasticity and current viscoplasticity using internal state variables. Maxwell equal areas rule, phase change, and metastability and stability of equilibrium states. Boundary value problems. Introduction to current research areas.

Prerequisite: ENME670; or permission of instructor.

ENME690 Mechanical Fundamentals of Electronic Systems (3 Credits)

An understanding of the fundamental mechanical principles used in design of electronic devices and their integration into electronic systems will be provided. Focus will be placed on the effect of materials compatibility, thermal stress, mechanical stress, and environmental exposure on product performance, durability and cost. Both electronic devices and package assemblies will be considered. Analysis of package assemblies to understand thermal and mechanical stress effects will be emphasized through student projects.

Prerequisite: ENME351; or equivalent.

Jointly offered with: ENME473.

Credit Only Granted for: ENME473 or ENME690.

ENME691 Industrial Artificial Intelligence (3 Credits)

Introduces students to advanced technologies - such as machine learning and tools, prognostics and health management (PHM), and data-centric engineering analytics - that ultimately enable the conversion of industrial big data into decision-ready information that can be used to improve the design, the productivity and the efficiency of industrial systems.

Prerequisite: ENME202; or equivalent; experience using Python; or permission of the instructor.

Credit Only Granted for: ENME485 or ENME691.

ENME692 Engineering Quantum Systems and Sensors (3 Credits)

Designed for students interested in learning quantum mechanics from a technological perspective, illustrated through specific examples from quantum engineering at the nanoscale and from discrete quantum systems. The focus is not on textbook examples such as hydrogen atom solutions and angular momentum algebra. Instead, focus areas would be quantum sensors and systems, description and control of quantum noise, which should elicit particular appeal across many areas of engineering and physical sciences. The course will prepare students for emerging quantum technologies besides computing and cryptography that are part of the Quantum 2.0 revolution.

Prerequisite: PHYS270 and MATH141.

Recommended: Any MATH 240, MATH 461, MATH341, or ENEE290 or equivalent courses covering linear algebra, eigenvalues, and eigenvectors.

Jointly offered with: ENME434.

Credit Only Granted for: ENME434 or ENME692.

ENME694 Fundamentals of Optics and Optical Systems for Engineers (3 Credits)

This unique course is designed to teach the fundamentals of optics and optical systems for engineering students, more specifically (1) to familiarize students with the optical principles and applications, and (2) to help them learn the method details and develop skills for research and development. The key concepts are presented, with an emphasis on their physical meanings rather than theoretical and mathematical meanings, to help create a better understanding of optics for engineering applications.

Credit Only Granted for: ENME694 or ENME808Z.

Formerly: ENME808Z.

ENME695 Design for Reliability (3 Credits)

Reliability is the ability of a product or system to perform as intended (i.e., without failure and within specified performance limits) for a specified time, in its life-cycle conditions. Knowledge of reliability concepts and principles, as well as risk assessment, mitigation and management strategies prepares engineers to contribute effectively to product development and life cycle management. This course teaches the fundamental knowledge and skills in reliability as it pertains to the design, manufacture, and use of electrical, mechanical, and electro-mechanical products. Topics cover the suitability of the supply chain members to contribute towards development, manufacturing, distribution and support of reliable products; efficient and cost-effective design and manufacture of reliable products; process capability and process control; derating, uprating, FMEA, reliability prediction and reliability allocation; how to plan and implement product testing to assess reliability; how to analyze degradation, failure, and return data to estimate fundamental reliability parameters; root cause analysis; and reliability issues associated with warranties, regulatory requirements, and liabilities.

Cross-listed with: ENRE695.

Credit Only Granted for: ENME695 or ENRE695.

ENME700 Advanced Mechanical Engineering Analysis I (3 Credits)

An advanced, unified approach to the solution of mechanical engineering problems, emphasis is on the formulation and solution of equilibrium, eigenvalue and propagation problems. Review and extension of undergraduate material in applied mathematics with emphasis on problems in heat transfer, vibrations, fluid flow and stress analysis which may be formulated and solved by classical procedures.

ENME701 Sustainable Energy Conversion and the Environment (3 Credits)

Discussion of the major sources and end-uses of energy in our society with particular emphasis on renewable energy production and utilization. The course introduces a range of innovative technologies and discusses them in the context of the current energy infrastructure. Renewable sources such as wind and solar, and renewable enabling technologies such as energy storage are discussed in detail. Particular attention is paid to the environmental impact of the various forms of energy. This course is designed to provide, when taken together with ENME635, a comprehensive overview of sustainable energy production and utilization including carbon capture and sequestration.

Prerequisite: Undergraduate thermodynamics course or permission of instructor.

ENME704 Active Vibration Control (3 Credits)

This course aims at introducing the basic principles of the finite element method and applying it to plain beams and beams treated with piezoelectric actuators & sensors. The basic concepts of structural parameter identification are presented with emphasis on Eigensystem Realization Algorithms (ERA) and Auto-regression models (AR). Different active control algorithms are then applied to beams/piezo-actuator systems. Among these algorithms are: direct velocity feedback, impedance matching control, modal control methods & sliding mode controllers. Particular focus is given to feedforward Least Mean Square (LMS) algorithm & filtered-X LMS. Optimal placement strategies of sensor & actuators are then introduced & applied to beam/piezo-actuator systems.

Prerequisite: ENME662 and ENME602; or students who have taken courses with comparable content may contact the department.

Recommended: Completion of coursework or background in Vibrations and Control recommended.

Restriction: Must be in a major in ENGR-A. James Clark School of Engineering.

ENME707 Combustion and Reacting Flow (3 Credits)

This course covers thermochemistry and chemical kinetics of reacting flows in depth. In particular, we focus on the combustion of hydrocarbon fuels in both a phenomenological and mechanistic approach. The course covers the specifics of premixed and nonpremixed flame systems, as well as ignition and extinction. Combustion modeling with equilibrium and chemical kinetic methods will be addressed. Environmental impact and emissions minimization will be covered in detail. Finally, the course will cover available combustion diagnostic methods and their application in laboratory and real-world systems.

Prerequisite: ENME331 and ENME332; or students who have taken courses with comparable content may contact the department.

ENME711 Vibration Damping (3 Credits)

This course aims at introducing the different damping models that describe the behavior of viscoelastic materials. Emphasis will be placed on modeling the dynamics of simple structures (beams, plates & shells) with Passive Constrained Layer Damping (PCLD). Considerations will also be given to other types of surface treatments such as Magnetic Constrained Layer Damping (MCLD), Shunted Network Constrained Layer Damping (SNCLD), Active Constrained Layer Damping (ACL D) and Electrorheological Constrained Layer Damping (ECLD). Energy dissipation characteristics of the damping treatments will be presented analytically & by using the modal strain energy approach as applied to finite element models of vibrating structures.

Prerequisite: ENME662; or students who have taken courses with comparable content may contact the department.

Recommended: Completion of coursework or background in Vibrations recommended.

Restriction: Must be in a major in ENGR-A. James Clark School of Engineering.

ENME712 Measurement, Instrumentation and Data Analysis for Thermo-Fluid Processes (3 Credits)

This course is designed to offer systemic coverage of the methodologies for measurement and data analysis of thermal and fluid processes at the graduate level. The course materials will cover three broad categories: (1) Fundamentals of thermal and fluid processes in single phase and multi phase flows as relates to this course; Measurement and Instrumentation techniques for measurement of basic quantities such as pressure, temperature, flow rate, heat flux, etc., and (3) Experimental Design and Planning, sources of errors in measurements, and uncertainty analysis.

ENME722 Equilibrium Modeling in Engineering (3 Credits)

Provide motivation and introduction to equilibrium models involving economics and engineering. We will concentrate on models involving markets (Nash-Cournot, etc.), those wherein the activities are spatially diverse, those involving energy activities or traffic flow, as well as selected other examples in mechanical engineering. Areas that will be covered include: Review of relevant optimization theory, presentation of the mixed complementarity problem (MCP) and variational inequality problem (VIP) formats to solve equilibrium problems as well as introduction to existence and uniqueness results, review of relevant game theory notions, presentation of specific models for engineering-economic applications, presentations for algorithms to solve these equilibrium problems.

Credit Only Granted for: ENCE722 or ENME722.

ENME725 Probabilistic Optimization (3 Credits)

Provide an introduction to optimization under uncertainty. Chance-constrained programming, reliability programming, value of information, two stage problems with recourse, decomposition methods, nonlinear and linear programming theory, probability theory. The objectives of this course are to provide understanding for studying problems that involve optimization under uncertainty, learn about various stochastic programming formulations (chance constrained programs, two stage methods with recourse, etc.) relevant to engineering and economic settings, present theory for solutions to such problems, and present algorithms to solve these problems.

Prerequisite: An advanced undergraduate course in probability and a graduate course in optimization or permission of the instructor required. Cross-listed with ENCE725.

Credit Only Granted for: ENME725 or ENCE725.

ENME737 Application of AI in Reliability: Prognostics and Systems Health Management (PHM) (3 Credits)

Prognostics and health management (PHM) is an enabling discipline consisting of technologies and methods to assess the reliability of a product in its actual life cycle conditions to determine the advent of failure and mitigate system risk. PHM permits the reliability of a system to be evaluated and predicted in its actual application conditions. In recent years, prognostics and health management (PHM) has emerged as a key enabling technology to provide an early warning of failure; to forecast maintenance as needed; to reduce maintenance cycles; to assess the potential for life extensions; and to improve future designs and qualification methods. In the future, PHM will enable systems to assess their own real-time performance (self-cognizant health management and diagnostics) under actual usage conditions and adaptively enhance life cycle sustainment with risk-mitigation actions that will virtually eliminate unplanned failures.

Credit Only Granted for: ENME737 or ENME808A.

Formerly: ENME808A.

ENME740 Lab-on-a-Chip Microsystems (3 Credits)

Fundamentals and application of lab-on-a-chip and microfluidic technologies. A broad view of the field of microfluidics, knowledge of relevant fabrication methods and analysis techniques, and an understanding of the coupled multi-domain phenomena that dominate the physics in these systems.

Credit Only Granted for: ENME 481, ENME 808E, ENME 740.

Formerly: ENME 808E.

ENME741 Operations Research Models in Engineering (3 Credits)

A survey of the fundamentals of operations research models and methods in engineering including: optimization using linear programming, nonlinear programming, integer programming, as well as equilibrium/game theory via mixed complementarity problems. Examples of specialized course items include: specifics of optimizing power and gas networks, discussion of other network optimization problems, resource-constrained problems, two-level optimization as an example of mixed integer nonlinear programming (MINLP) programming problems as well as algorithms to solve the above types of problems."

Prerequisite: (ENCE302; or (ENME271 and ENME392)); and (MATH140 and MATH240).

ENME742 Urban Microclimate and Energy (3 Credits)

Examines urban microclimate from the perspective of transient heat and mass transfer using building energy simulations for building clusters. The focus is on understanding building energy consumption and environmental impacts from the individual building scale (~100) to a neighborhood scale (~103). Emerging morphological properties of building clusters modulate transient convective and radiative heat transfer resulting in different local microclimatic conditions. At the neighborhood scale, these conditions are analyzed using heat and mass transfer simulations in building clusters to provide boundary conditions for transient building energy simulations. At the individual building scale, besides the energy consumption, this course examines connection between indoor and outdoor environments.

Prerequisite: ENES232 or equivalent; and must have completed or be concurrently enrolled in ENEM332 or equivalent.

Jointly offered with: ENME424.

Credit Only Granted for: ENME424 or ENME742.

ENME743 Applied Machine Learning for Engineering and Design (3 Credits)

Learn how to apply techniques from Artificial Intelligence and Machine Learning to solve engineering problems and design new products or systems. Design and build a personal or research project that demonstrates how computational learning algorithms can solve difficult tasks in areas you are interested in. Master how to interpret and transfer state-of-the-art techniques from computer science to practical engineering situations and make smart implementation decisions.

Prerequisite: Must have completed undergraduate level Statistics (ENME392 or equivalent), or permission of the instructor.

Jointly offered with: ENME440.

Credit Only Granted for: ENME440 OR ENME743.

ENME744 Additive Manufacturing (3 Credits)

Develop a comprehensive understanding of fundamental additive manufacturing-alternatively, "three-dimensional (3D) printing-approaches, including extrusion-based deposition, stereolithography, powder bed-based melting, and inkjet-based deposition. Cultivate a "design-for-additive manufacturing" skill set for combining computer-aided design (CAD) and computer-aided manufacturing (CAM) methodologies to produce successful 3D prints. Fabricate 3D mechanical objects using a variety of 3D printing technologies on campus. Execute a design project that demonstrates how additive manufacturing technologies can overcome critical limitations of traditional manufacturing processes.

Prerequisite: ENME272 and ENME331; or students who have taken courses with comparable content may contact the department. Jointly offered with ENME416.

Credit Only Granted for: ENME 416 OR ENME 744.

ENME745 Numerical Methods in Engineering (3 Credits)

Fundamental aspects of how to apply analytical mathematical concepts to discrete data. The course is aimed at graduate students in any area of engineering, and treats the material in a general manner that is not specific to any application or field of specialization.

Jointly offered with: ENME417.

Credit Only Granted for: ENME745, ENME808B, ENME417 or ENME489J.

Formerly: ENME808B.

ENME750 Applied System Identification (3 Credits)

An introductory graduate level course on system identification, which concerns various methods and techniques for data-driven modeling and estimation of dynamical systems.

Credit Only Granted for: ENME808R or ENME750.

Formerly: ENME 808R.

ENME751 Applied Nonlinear Control (3 Credits)

An introductory graduate level course on nonlinear control design, which concerns various methods and techniques for the analysis and synthesis of nonlinear control systems.

Credit Only Granted for: ENME808B or ENME751.

Formerly: ENME808B.

ENME753 Indoor Environment and Mechanical Systems (3 Credits)

Fundamentals of indoor air quality and its measurements. Exploration of air cleaning technologies for gaseous, particulate and infectious agent contaminants. Simulations of air flow and contaminants with multi-zone models to allow testing of both contaminant dispersion in buildings and effectiveness of air cleaning technologies.

Jointly offered with: ENME422.

Credit Only Granted for: ENME422, ENME753, or ENME808U.

Formerly: ENME808U.

ENME765 Thermal Issues in Electronic Systems (3 Credits)

This course addresses a range of thermal issues associated with electronic products life cycle. Computational modeling approaches for various levels of system hierarchy. Advanced thermal management concepts including: single phase and phase change liquid immersion, heat pipes, and thermoelectrics.

Prerequisite: ENME331 and ENME332.

Corequisite: ENME473; or students who have taken courses with comparable content may contact the department.

ENME770 System Sustainment: The Science and Policy of Sustaining Critical Systems (3 Credits)

Introduces the important attributes of system sustainment (system maintenance, support and upgrade) by integrating data analytics, cost analysis and public policy. Topics include: acquisition, reliability, maintenance, availability, inventory management, supply chain, life-cycle cost and contracting.

Credit Only Granted for: PLCY798J or ENME770.

ENME775 Manufacturing Technologies for Electronic Systems (3 Credits)

This highly multi-disciplinary course presents the mechanical fundamentals of manufacturing processes used in electronics assemblies. The emphasis is on quantitative modeling of the intrinsic impact that processing has on structure, properties, performance and durability. Students will learn how to quantitatively model many of the key manufacturing steps from mechanistic first principles, so that sensitivity studies and process optimization can be performed in a precise manner. Processes considered include: wafer-level processes such as polishing, lithography, etching and dicing; packaging operations such as die attachment, wirebonding, flip chip bonding, and plastic encapsulation; multilevel high-density substrate fabrication processes; assembly processes such as reflow and wave soldering of surface-mount components to electronic substrates.

Prerequisite: ENME690.

ENME780 Mechanical Design of High Temperature and High Power Electronics (3 Credits)

This course will discuss issues related to silicon power device selection (IGBT, MCT, GTO, etc.), the characteristics of silicon device operation at temperatures greater than 125C, and the advantages of devices based on SOI and SiC. It will also discuss passive components and packaging materials selection for distributing and controlling power, focusing on the critical limitations to use of many passive components and packaging materials at elevated temperatures. In addition it will cover packaging techniques and analysis to minimize the temperature elevation caused by power dissipation. Finally, models for failure mechanisms in high temperature and high power electronics will be presented together with a discussion of design options to mitigate their occurrence.

Prerequisite: ENME382, ENME473, or ENME690.

ENME788 Seminar (1-3 Credits)

First or second semester. Credit in accordance with work outlined by mechanical engineering staff.

ENME799 Master's Thesis Research (1-6 Credits)**ENME808 Advanced Topics in Mechanical Engineering (2-3 Credits)****ENME809 Special Topics in Mechanical Engineering (1-3 Credits)**

Covers current topics in mechanical engineering and related fields.

Restriction: Permission of the Mechanical Engineering department.

Repeatable to: 6 credits if content differs.

ENME898 Pre-Candidacy Research (1-8 Credits)**ENME899 Doctoral Dissertation Research (1-8 Credits)**

ENNU - Engineering, Nuclear

ENPM - Engineering, Professional Masters

ENPM604 Machine Learning Techniques Applied to Cybersecurity (3 Credits)

Focuses on applying machine learning techniques to cybersecurity, and includes labs to be done independently, as well as an overview of the latest machine learning algorithms and their application to cyber. A brief overview of which techniques should be applied to particular cyber problems will be provided, and the course culminates in students researching the latest applications of Machine learning to cyber, allowing the students to each develop a niche of expertise in that specific subtopic. As such, the students should be increasingly employable in their area of cyber expertise by industries searching for solutions to their cyber problem space.

Credit Only Granted for: ENPM808R or ENPM604.

Formerly: ENPM808R.

ENPM605 Python Applications for Robotics (3 Credits)

This hands-on course will look at the use of Python 3 with the Robot Operating System (ROS) in order to control a mobile robot in Gazebo simulated environments.

Credit Only Granted for: ENPM809E or ENPM605.

Formerly: ENPM809E.

ENPM606 Data Science (3 Credits)

The purpose of this course is to teach some of the best and most general approaches to get the most out of data through clustering, classification, and regression techniques. Students will gain experience analyzing several kinds of data, including document collections, financial data, scientific data, and natural images.

Prerequisite: Comfortable with basic math concepts (sums, variables), discrete math, and some programming experience (i.e. have taken an introductory programming course or equivalent, in any language, but preferably Python).

Credit Only Granted for: ENPM808W or ENPM606.

Formerly: ENPM808W .

ENPM611 Software Engineering (3 Credits)

Software engineering concepts, methods, and practices important to both the theorist and the practitioner will be covered. The entire range of responsibilities expected of a software engineer are presented. The fundamental areas of requirements development, software design, programming languages, and testing are covered extensively. Sessions on supporting areas such as systems engineering, project management, and software estimation are also included.

Prerequisite: Competency in one programming language; and must have completed an undergraduate software engineering course.

ENPM612 System and Software Requirements (3 Credits)

Focus will be placed on the theoretical and practical aspects of requirements development. Students will recognize the place of requirements, how to work with users, requirements methods and techniques, the various requirements types, how to set requirements development schedules, requirements evolution, how to model and prototype requirements, how to evaluate and manage risk in requirements, techniques to test requirements, how to manage the requirements process, and how to write an effective requirements document.

Prerequisite: ENPM611.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM613 Software Design & Implementation (3 Credits)

Covers the software design process, from understanding the need or problem, to creating suitable architecture and detailed design solutions, to preserving and evolving the design during implementation and maintenance. The main study topics include: requirements analysis models; user centered design; architecture design through decomposition and composition; architecture styles and architecture tactics for supporting various quality attributes such as security and usability; design for reuse and with reuse; detailed design object-oriented principles (such as SOLID) and design patterns; approaches for evaluating, comparing, and selecting design solutions; standard notations for documenting architecture views, detailed design, and analysis models; and industry standards for creating design deliverables. Students will acquire not only technical knowledge, but also soft skills such as communication, collaborations, critical thinking, leadership, negotiation, and time management.

Prerequisite: ENPM611.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM614 Software Testing & Maintenance (3 Credits)

The purpose of this course is to provide an overview of software testing and maintenance and how these activities fit into the Software Engineering Life-Cycle. Many examples used in the lectures are derived from analysis of various NASA systems. Topics include various forms of testing such as Functional Testing, Combinatorial Testing, Structural Testing, Model-Based Testing, Security-oriented testing as well as Software Architecture's role in testability & maintainability, Regression Testing, Automated Testing, Testing Coverage including MC/DC coverage and testing standards.

Prerequisite: ENPM611.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM615 Embedded Systems (3 Credits)

Introduction to embedded systems design and evaluation: requirements, specification, architecture, hardware and software components, integration and performance evaluation. Topics include instruction sets, CPU, embedded computing platform, program design and analysis, operating systems, hardware accelerators, multiprocessors, networks, and system analysis. Real-life embedded systems design examples will be used throughout the course to illustrate these concepts.

Prerequisite: Must have completed undergraduate courses in logic design, computer architecture, and programming.

ENPM621 Heat Pump and Refrigeration Systems Design Analysis (3 Credits)

Thermal engineering of heat pump and refrigeration systems and thermal systems modeling. Thermodynamics and heat transfer. Cycle analysis, alternative refrigerants, graphical analysis using property charts.

Analysis of applications such as space conditioning, food preservation, manufacturing, heat recovery and cogeneration.

ENPM622 Energy Conversion I - Stationary Power (3 Credits)

Thermal engineering of modern power generation systems. Cycle analysis of various modern power generation technologies including gas turbine, combined cycle, waste burning and cogeneration. Energy storage and energy transport.

ENPM623 Engineering Combustion Emissions for Air Pollution Control (3 Credits)

Analysis of the sources and mechanisms of combustion generated air pollution. Air pollution due to internal combustion engines, power generation and industrial emissions. Techniques to minimize and control emission.

ENPM624 Renewable Energy Applications (3 Credits)

Thermodynamics and heat transfer of renewable energy sources for heating, power generation and transportation. Wind energy, solar thermal, photovoltaic, biomass, waste burning, and hydropower. Broad overview of the growing use of renewable energy sources in the world economy with detailed analysis of specific applications.

Prerequisite: Knowledge of thermodynamics, fluid mechanics, and heat transfer.

Credit Only Granted for: ENPM624 or ENME701.

ENPM625 Heating, Ventilation and Air Conditioning of Buildings (3 Credits)

Fundamentals of heating, ventilation and air conditioning analysis and design. Thermodynamics, heat transfer and fluid mechanics principles applied to field problems. Quantitative analyses stressed. Topics include psychometrics, thermal loads, incompressible flow in ducts and pipes, heat exchangers, cooling towers, and refrigeration.

Prerequisite: Undergraduate thermodynamics, fluid mechanics and heat transfer.

ENPM626 Environmental Energy Security (3 Credits)

The overall objective of this course is to develop a toolkit to evaluate the energy security - and in particular, the environmental energy security - of available energy resources and conversion technologies, including those in current use, and those that might be used in the foreseeable future.

Energy security is evaluated using a simple three-dimensional model based in the academic literature. This is an engineering class, and while we must occasionally delve into related economics and policy issues, we will focus on the core technical competencies in energy conversion needed to navigate the current world of energy.

Prerequisite: Must have completed undergraduate courses in thermodynamics and heat transfer.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM627 Environmental Risk Analysis (3 Credits)

Covers fundamental aspects of environmental risk analysis and methods used to perform environmental risk analyses. Topics covered in the class include: establishing the scope of an analysis, developing alternate conceptual models, representing source term release, modeling contaminant transport in environmental media (e.g., surface water, groundwater, air), modeling food chains, conducting an exposure assessment, understanding basic human toxicology, characterizing the dose-response relationship, and effectively communicating about and managing risk. This course covers fundamental aspects of designing a risk analysis as well as common pitfalls to avoid and major sources of uncertainty in environmental risk analyses.

ENPM631 TCP/IP Networking (3 Credits)

Exploration of how such a variety of devices can use a big range of technologies to connect seamlessly to each other. In the second half of the course we translate the basic knowledge of the protocols to more hands-on exercises in containerization (Docker) and at the end we give an introduction to Kubernetes, that is an open-source system for automating deployment and management of containerized applications.

Prerequisite: ENPM694 and ability to write code in one programming language and/or Undergraduate coursework in a programming language; or permission of instructor.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM633 Introduction to Machine Learning (3 Credits)

Basic algorithms and techniques in machine learning and their practical implementation.

Credit Only Granted for: ENPM808A, ENME808E or ENPM633.

ENPM634 Penetration Testing (3 Credits)

This course will give students a hands-on deep dive into penetration testing tools and methodologies. Starting with reconnaissance, open source intelligence, and vulnerability scanning we will move on to exploiting both clients and servers, moving laterally through a network while evading security measures.

Prerequisite: Familiarity with Linux and Windows operating systems, as well as TCP/IP and basic networking concepts.

Credit Only Granted for: ENPM809Q or ENPM634.

Formerly: ENPM809Q.

ENPM635 Thermal Systems Design Analysis (3 Credits)

Evaluates the trade-offs associated with thermal systems. Use of software for system simulation, evaluation and optimization. Applications include power and refrigeration systems, pipe flow systems, distillation columns, dehumidifying coils, and co-generation systems.

Prerequisite: Undergraduate courses in thermodynamics, fluid mechanics and heat transfer.

Credit Only Granted for: ENPM635 or ENME635.

ENPM636 Applied Additive Manufacturing (3 Credits)

In-depth understanding of Additive Manufacturing (AM) technologies and their applicability and limitations is important for future engineers and researchers in developing new engineering systems and identifying emerging opportunities in developing new products and processes. Real-life projects and the advancements that are realized through utilization of AM techniques will be presented in this course.

Credit Only Granted for: ENPM808G or ENPM636.

Formerly: ENPM808G.

ENPM637 Managing Software Engineering Projects (3 Credits)

Addresses the breadth of managing software engineering projects. It will help in transforming inspiring software engineers to software project leaders. The course will impart advanced principles, methods and tools for management of software projects in a realistic software engineering context. A hybrid project management will be taught with more focused on Agile Project Management paradigms. The course will also impart a cutting-edge scalable, modular, and integrated patterns of the Scaled Agile Framework (SAFe) 4.0 for the software engineering program and portfolios management. In addition, the course will also instill DevOps best practices to build much more responsible organizations that can move quickly in ever-changing circumstances. Methods for managing and optimizing the software development process are discussed along with techniques for performing each phase of the systems development lifecycle.

Credit Only Granted for: ENPM808E or ENPM637.

Formerly: ENPM808E.

ENPM640 Rehabilitation Robotics (3 Credits)

An introduction to a field of robotics dedicated to improving the lives of people with disabilities. The course is designed for students wishing to learn more about rehabilitation robotics, one of the fastest growing fields of robotics. Rehabilitation robotics is the application of robots to overcome disabilities resulting from neurologic injuries and physical trauma, and improve quality of life. This course considers not only engineering design and development, but also the human factors that make some innovative technologies successful and others commercial failures. Engineering innovation by itself, without considering other factors such as evidence-based R&D and product acceptance, may mean that some technologies don't become or remain available or are inefficient to aid their intended beneficiaries. This course differs from medical robotics in its focus on improving the quality of life through robot-mediated rehabilitation treatments, rather than improving or enhancing applications such as surgical interventions.

Recommended: Basic understanding of linear time-invariant control systems (e.g. ENPM667) is preferred but not required. No background or previous experience in assistive robotics, human biomechanics, and/or neuroscience is required.

Credit Only Granted for: ENPM808J, ENPM640, or ENME444.

Formerly: ENPM808J.

ENPM645 Human-Robot Interaction (3 Credits)

To define the intersection of human-robot interactions to include human-computer interfaces, as well as robotic emotions and facial expressions emulations. The result will provide a basis for students to assess the best approaches for interacting effectively with robots. Areas to be covered include biologically-inspired robotics, cognitive robotics, cultural and social aspects of robotics, data mining, examples of human systems interfaces, and machine learning with respect to A.I. principles and limitations.

Recommended: Some knowledge of A.I. fundamentals and data analytics recommended, but not required.

Credit Only Granted for: ENPM808K or ENPM645.

Formerly: ENPM808K.

ENPM650 Solar Thermal Energy Systems (3 Credits)

Covers a review of related fundamentals, including limitations imposed by thermodynamics, solar spectral characteristics, measurement, and analytical models to predict solar irradiance with respect to time, location and orientation. The course will then examine the characteristics of various components in solar thermal systems with particular emphasis on flat plate and concentrating collectors, fixed and tracking collector systems, heat exchangers and thermal storage to understand how they work and how their performance is influenced by their design. The course will then lead to an examination of systems and system performance, including system design, predicted energy savings and related economics. The course will introduce low temperature applications such as solar hot water, space heating and water distillation, as well as concentrating solar energy for solar thermo-chemical processes to produce hydrogen and solar power generation systems. A project of importance to the development of Solar Thermal Power Systems will be assigned.

Prerequisite: Undergraduate level courses in thermodynamics, heat transfer, and fluid mechanics, at least one semester each.

ENPM651 Heat Transfer for Modern Application (3 Credits)

Presents the three modes of heat transfer: conduction, convection, and radiation. One- and two-dimensional steady-state and transient conductions are studied. The lumped capacitance analysis is used for transient conduction when suitable. Convection heat transfer is studied in both external and internal flow cases and under laminar and turbulent flow regimes. Free convection is also studied where the heat transfer is due to flow-induced by fluid buoyancy. Radiation heat transfer is studied by considering both the general characteristics of radiation along with the properties of radiating surfaces and radiation heat transfer between surfaces. For each subject, real engineering examples will be tackled by using Engineering Equations Solver and Coil Designer software. As an application of multi-mode heat transfer principles, the design and optimization of air-to-refrigerant heat exchangers are studied in the course.

Prerequisite: Undergraduate Transfer Processes.

ENPM652 Applied Finite Element Methods (3 Credits)

Introduces the Finite Element Method (FEM), widely used to perform analyses in areas such as structural/solid mechanics, fluid mechanics, heat transfer. This course presents an introduction to the mathematical and physical concepts underpinning the FEM framework. Additionally, ANSYS Workbench software will be used to demonstrate engineering-scale examples for stress and thermal analysis problems. There are no formal requirements for this course although students will benefit from a familiarity with basic concepts in linear algebra, calculus, differential equations, solid mechanics, and heat transfer.

Restriction: Must not have completed ENME674; and must not have completed ENAE652.

Credit Only Granted for: ENME674, ENAE652, or ENPM652.

ENPM654 Energy Systems Management (3 Credits)

Covers a wide range of energy management and energy efficiency topics including energy auditing, energy efficient lighting systems and motors, demand limiting and control, control strategies for optimization, direct digital control, integrated building automation systems, communication networks, distributed generation, cogeneration, combined heat and power, process energy management and the associated economic analyses. Included will be the latest internet based technologies for accessing real-time energy pricing and managing energy demand remotely for multiple buildings or campuses.

Recommended: Background in thermodynamics, fluid mechanics, and heat transfer is recommended.

ENPM655 AI-Based Software Systems (3 Credits)

The goal of this new course is to address the important problem of specifying, developing, and testing software systems that are based on artificial intelligence (AI) components.

Credit Only Granted for: ENPM808O or ENPM655.

Formerly: ENPM808O.

ENPM656 Energy Conversion II -- Mobile Power (3 Credits)

Designed to give students an understanding of the principles and design concepts associated with important fuel - engine aspects of modern and advanced mobility power systems. Emphasis is given to state of the art and emerging IC engine technologies such as those applied to modern and advanced automotive (i.e. self-propelled) vehicles. Electric Vehicles will also be explored.

Prerequisite: Must have completed undergraduate courses in thermodynamics, heat transfer, and fluid mechanics; or ENPM672.

ENPM657 Applied Cryptography (3 Credits)

The goal of this course is to provide students with a foundational understanding of cryptography as used in the real world. Students will learn about private-key encryption, message authentication codes, key-exchange protocols, public-key encryption, and digital signatures, in addition to learning about underlying primitives such as pseudorandom number generators, block ciphers, and hash functions. The course will also try to convey the "cryptographic mindset," including formal threat modeling and proofs of security. We will emphasize real-world usage of cryptography by covering standards and best practices, discussing attacks on deployed systems, and giving programming assignments meant to reinforce the concepts covered in class.

Prerequisite: A solid foundation in discrete mathematics, including probability, statistics, and linear algebra, along with basic programming skills and algorithm analysis.

Credit Only Granted for: ENPM809A or ENPM657.

Formerly: ENPM809A.

ENPM660 Wind Energy Engineering (3 Credits)

An examination of four central topics in wind energy engineering: the nature of wind energy as a resource for generating electricity; the aerodynamics of wind turbines by which the wind energy is converted into mechanical energy; the mechanics and dynamics of the wind energy system (tower, rotor, hub, drive train, and generator); and the electrical aspects of wind turbines. Additional topics to be included in the course include: Wind turbine design; wind turbine control; wind turbine siting, system design, and integration; Wind energy system economics; and wind energy systems environmental impacts and aspects. The course is intended to pass along substantial subject matter knowledge and skills, it can only be treated as an introduction to this extensive, multidisciplinary topic. However, students are expected to emerge with a substantial knowledge of wind energy systems and the methods used to analyze such systems.

ENPM661 Planning for Autonomous Robots (3 Credits)

Planning is a fundamental capability needed to realize autonomous robots. Planning in the context of autonomous robots is carried out at multiple different levels. At the top level, task planning is performed to identify and sequence the tasks needed to meet mission requirements. At the next level, planning is performed to determine a sequence of motion goals that satisfy individual task goals and constraints. Finally, at the lowest level, trajectory planning is performed to determine actuator actions to realize the motion goals. Different algorithms are used to achieve planning at different levels. This graduate course will introduce planning techniques for realizing autonomous robots. In addition to covering traditional motion planning techniques, this course will emphasize the role of physics in the planning process. This course will also discuss how the planning component is integrated with control component. Mobile robots will be used as examples to illustrate the concepts during this course. However, techniques introduced in the course will be equally applicable to robot manipulators.

ENPM662 Introduction to Robot Modeling (3 Credits)

This course introduces basic principles for modeling a robot. Most of the course is focused on modeling manipulators based on serial mechanisms. The course begins with a description of the homogenous transformation and rigid motions. It then introduces concepts related to kinematics, inverse kinematics, and Jacobians. This course then introduces Eulerian and Lagrangian Dynamics. Finally, the course concludes by introducing basic principles for modeling manipulators based on parallel mechanisms. The concepts introduced in this course are subsequently utilized in control and planning courses.

Recommended: Students should have intermediate programming skills (Python) and basic algebra knowledge for this course.

ENPM663 Building a Manufacturing Robotic Software System (3 Credits)

This hands-on course will look at the components of manufacturing robots, including architectures, planning/control, simulation, and measurement science. Students will explore the work that is being researched around the world in each of these areas, and will perform small hands-on exercises in most of the classes to gain a deeper understanding of how a selected set of these technologies can be applied to real-world challenges.

Recommended: Prior C++ or Python programming experience.

Credit Only Granted for: ENPM809B or ENPM663.

Formerly: ENPM809B.

ENPM664 Embedded System Hacking and Security (3 Credits)

The purpose of this course is to reveal the tools, techniques and procedures (TTPs) employed by adversaries to exploit and subvert the security of embedded systems. This course will cover the core concepts and techniques to analyze and characterize the behavior of embedded systems and platforms. Concepts will be introduced and discussed within the context of an adversary intent on altering or subverting the behavior of such systems. The course does not expect students to have any prior embedded systems experience.

Prerequisite: Prior programming experience, familiarity with computer architectures and reading assembly.

Restriction: Must have permission of Maryland Applied Graduate Engineering.

Credit Only Granted for: ENPM809I or ENPM664.

Formerly: ENPM809I.

ENPM665 Cloud Security (3 Credits)

Covers the fundamentals of securing cloud-based workloads from the ground up with many hands-on examples. Through these hands-on exercises the course will demonstrate where the similarities and differences are when securing the cloud compared to securing traditional IT.

Credit Only Granted for: ENPM809J or ENPM665.

Formerly: ENPM809J.

ENPM667 Control of Robotic Systems (3 Credits)

This is a basic course on the design of controllers for robotic systems. The course starts with mainstay principles of linear control, including a review of elementary concepts of systems, and discusses applications to independent joint control. The second part of the course introduces a physics-based approach to control design that uses energy and optimization principles to tackle the design of controllers that exploit the underlying dynamics of robotic systems. The course ends with an introduction to force control and basic principles of geometric control if time allows.

ENPM670 Advanced Energy Audit, Modeling, and Management of Building Systems (3 Credits)

Provides students with fundamentals and applications of energy audit, modeling, and management in building energy systems. It will cover key definitions, units, the supply/demand fundamentals for the various energy sources, the challenges of decarbonization (across several sectors), drivers of energy demand in the buildings sector (residential, commercial, manufacturing), energy audit procedures for various types of systems, economics/life-cycle costing and more. Students will gain experience conducting energy audits through real-world project(s), different modeling tools (e.g. System Advisor Models), and data sources necessary to conduct core analyses across sectors will be covered.

Prerequisite: Prior knowledge of undergraduate basic thermodynamics and heat transfer.

Recommended: Knowledge of electrical systems and controls is desirable.

ENPM671 Advanced Mechanics of Materials (3 Credits)

Formulate and quantitatively state the mechanical/physical responses of structural components and configurations subjected to loads, temperature, pre-strains etc. The two methods of analysis employed are the mechanics of materials approach and the theory of elasticity approach. Analysis and design of components of structural/machine systems as experienced in aeronautical, civil, mechanical and nuclear engineering.

Prerequisite: Undergraduate level knowledge of mechanics of materials.

ENPM672 Fundamentals for Thermal Systems (3 Credits)

Included in this course is an introduction to thermodynamics, fluid mechanics and heat transfer. Emphasis is on gaining an understanding of the physical concepts through the solving of numerical problems associated with simple thermal fluid processes and cycles. Both ideal gases and multiphase fluids will be considered as the working fluids.

Prerequisite: Undergraduate engineering, physics or chemistry degree.

Restriction: Permission of Maryland Applied Graduate Engineering.

ENPM673 Perception for Autonomous Robots (3 Credits)

This course offers a foundation in computer vision. Students will learn techniques and algorithms that can be used to solve an abundance of perception problems. This course is dedicated to anyone interested in giving their autonomous system (e.g., robot, autonomous driving car, or simply a smart camera) means to understand their surrounding world. Throughout the projects of this course students will gain hands-on experience in solving real-life problems such as lane detection for autonomous driving, computing velocities of moving objects, and building a 3D model of an object using 2D images from cameras. Moreover, students will gain experience with state-of-the-art tools such as programming using OpenCV, Python and introduction to Machine Learning using PyTorch.

Prerequisite: Must have completed or be concurrently enrolled in ENPM661; and must have proficiency in a programming language.

Recommended: Familiarity with Python.

Restriction: Permission of Maryland Applied Graduate Engineering (MAGE).

ENPM680 Introduction to Secure Coding for Software Engineering (3 Credits)

Covers core concepts and techniques to analyze and characterize such security bugs, and potential ways to mitigate them. Concepts will be introduced and discussed within the context of an adversary intent on altering or subverting the behavior of the software with security impacts.

Credit Only Granted for: ENPM809W or ENPM680.

Formerly: ENPM809W.

ENPM685 Security Tools for Information Security (3 Credits)

Students will perform host- and network-based security tasks relating to security, investigation, compliance verification and auditing using a wide selection of commonly used tools on both Windows and Linux platforms, with emphasis on open source tools.

Prerequisite: Familiarity with Linux and Windows operating systems, as well as TCP/IP and basic networking concepts.

ENPM686 Information Assurance (3 Credits)

The first half of lectures provides an overview of cybersecurity. One third of these lectures focuses on the fundamentals of cybersecurity like authentication, access control, and security models. The second third focuses on the practice of cybersecurity using Unix and Windows NT as case studies. The last third is dedicated to security in distributed systems including network security, and World Wide Web security. The second half of the lectures focuses on the information assurance process. First, information assets are enumerated and classified. Second, the main vulnerabilities and threats are identified. Third, a risk assessment is conducted by considering the probability and impact of the undesired events. Finally, a risk management plan is developed that includes countermeasures involving mitigating, eliminating, accepting, or transferring the risks, and considers prevention, detection, and response.

ENPM687 Digital Forensics and Incidence Responses (3 Credits)

Students will implement a robust incident response methodology, including proper forensic handling of evidence, and cover legal aspects of national and international law regarding forensics. The bulk of the course covers evidence acquisition, preservation, analysis and reporting on multiple platforms.

Prerequisite: Experience with both Windows and Unix-based operating systems, including using the command line.

ENPM690 Robot Learning (3 Credits)

Machine learning may be used to greatly expand the capabilities of robotic systems, and has been applied to a variety of robotic system functions including planning, control, and perception. Adaptation and learning are particularly important for development of autonomous robotic systems that must operate in dynamic or uncertain environments. Ultimately we would like for the robots to expand their knowledge and improve their own performance through learning while operating in the environment (on-line and/or lifelong learning). This graduate course will explore the application of machine learning techniques, paradigms, and control design to robotic systems, focusing primarily on key useful representations and model building techniques for application in non-stationary robotic systems.

Prerequisite: Proficiency in at least one commonly used programming language (e.g., C++, Python, Java), CMSC422 (Intro to Machine Learning) or equivalent.

Credit Only Granted for: ENPM808F or ENPM690.

Formerly: ENPM808F.

ENPM691 Hacking of C programs and Unix Binaries (3 Credits)

Teaches the fundamentals of secure programming in C. An in depth discussion on various security vulnerabilities (e.g., buffer overflows) in C applications will be taught with hands-on demo of concepts during the class. Students will learn how a C program runs "under-the-hood". The course will teach nitty-gritty of C programs by analyzing at the assembly level. The course discusses best practices (e.g., coding standards) and design principles for secure programming so that security can be built-in during design time. In addition to assignments, students are required to present papers related to this course.

Prerequisite: ENEE150 or equivalent.

ENPM692 Manufacturing and Automation (3 Credits)

Covers automation and product realization, digital factories, and disruptive manufacturing technologies. The role of additive manufacturing, sustainability, and performance simulation in selected manufacturing scenarios will be explored alongside automation strategies for rapid product development.

Credit Only Granted for: ENPM808P or ENPM692.

Formerly: ENPM808P.

ENPM693 Network Security (3 Credits)

Introduction to various approaches to design; specify and verify security protocols used in large systems and networks; familiarization with some current technologies. Security threats and countermeasures, communication security and basic encryption techniques, authentication protocols, data confidentiality and integrity, analysis of cryptographic protocols, and access control in large systems and networks.

Prerequisite: An operating systems and/or network protocol course or equivalent.

Formerly: ENPM808N.

ENPM694 Networks and Protocols (3 Credits)

Provides an in-depth review of the Internet with a focus on the end-to-end effects of technologies and protocols that operate in different layers. All protocols and technologies are covered in a holistic framework with an emphasis on their effect on the network and application performance.

The course also includes a brief introduction of more modern concepts in the field of networking such as SDN and NFV to encourage deeper study of those topics.

ENPM695 Secure Operating Systems (3 Credits)

Operating systems are the basic building block on which programmers build applications and on which security-minded professionals rely, whether they are monitoring activity on a computer, testing applications for security, or determining how malicious code affected their network. This course covers advanced topics in operating systems including process management and communication, remote procedure calls, memory management (including shared memory and virtual memory), checkpointing and recovery, file system, I/O subsystem and device management, distributed file systems and security. The course consists of reading and discussing research papers and includes a course project.

Prerequisite: ENPM691 and CMSC106; or permission of instructor.

Restriction: Permission of Maryland Applied Graduate Engineering.

Additional Information: This course assumes knowledge of C programming and a previous operating systems class or knowledge in various issues such as process management, process synchronization, the critical section problem, CPU scheduling, memory management, secondary storage management.

ENPM696 Reverse Software Engineering (3 Credits)

An in-depth understanding of software reverse engineering concepts and hands-on training with reverse engineering tools, including disassemblers, decompilers, and code analyzers. Students will become familiar with both low-level software and the x86 instruction set through binary reversing sessions. This course also provides insights into many subjects such as system security, source code analysis, software design, and program understanding that will be beneficial in a variety of fields.

Prerequisite: ENEE150 or equivalent.

Recommended: Proficiency with using a *nix command line in a shell of their choice, e.g., Bash, Zsh, csh. Ability to create and manage virtual machines running intel-based Linux and Windows distributions.

ENPM697 Secure Software Testing and Construction (3 Credits)

As software gets more complex, there is even more potential for vulnerabilities to remain in the production version. While traditional and emerging software testing methods are very good at detecting a large majority of "bugs" in the software, modifications to the methods are necessary to ensure vulnerabilities related to security are discovered and mitigated prior to release. In industry, there is also a cost-benefit analysis that determines the limits to pre-release testing, further enforcing the need to uniquely identify security vulnerabilities, potentially prioritizing their correction over other vulnerabilities. This course will cover methods of building security in from the beginning of development and testing the resulting software to ensure security vulnerabilities are detected. The course will use a mixture of textbook principles and research papers to cover the concepts. Students will also complete a course project.

Prerequisite: Permission of instructor; or (ENPM691 and CMSC106).

Restriction: Must have permission of the Maryland Applied Graduate Engineering office.

ENPM700 Software Development for Robotics (3 Credits)

Teaches the tools and processes to develop professional quality software for deployed systems and products. Students will learn the best practices of taking new ideas or prototypes, and understanding what it takes to build the complex software that is so important to today's commercialized robotic systems.

Prerequisite: ENPM702.

Restriction: Permission of Maryland Applied Graduate Engineering.

Credit Only Granted for: ENPM808X or ENPM700.

Formerly: ENPM808X.

ENPM701 Autonomous Robotics (3 Credits)

This is a hands-on course exploring the principles of robotic autonomy. Students will explore the theoretical, algorithmic, and implementation aspects of autonomous robotic modeling and controls, perception, localization and SLAM, planning, and decision making. These techniques will be applied through completion of a semester-long hands-on project employing the course material, ground-based mobile robots, and Python.

Restriction: Permission of Maryland Applied Graduate Engineering.

Credit Only Granted for: ENPM809T or ENPM701.

Formerly: ENPM809T.

ENPM702 Introductory Robot Programming (3 Credits)

This hands-on course will introduce students to the C++ programming language and is specifically designed for students who have had little to no programming experience in their previous studies.

Restriction: Permission of Maryland Applied Graduate Engineering.

Credit Only Granted for: ENPM809Y or ENPM702.

Formerly: ENPM809Y .

ENPM703 Fundamentals of AI and Deep Learning (3 Credits)

Fundamentals of machine learning techniques with a deep dive into cutting edge concepts that enabled neural networks to achieve state of the art performance in many visual, textual, and biomedical problems. Fundamental concepts like forward networks, convolution networks, recurrent neural networks, back propagation, loss functions, batch gradient descent, and stochastic optimization will be studied.

Prerequisite: Linear algebra; Fundamentals of programming; Fundamentals of statistics.

Credit Only Granted for: ENPM809K or ENPM703.

Formerly: ENPM809K.

ENPM808 Advanced Topics in Engineering (1-3 Credits)

Advanced topics selected by the faculty for students in the professional master of engineering program. May be taken for repeated credit when identified by topic title.

ENPM809 Special Topics in Engineering (3 Credits)

Special topics selected by the faculty for students in the professional master of engineering and graduate certificate in engineering program. May be taken for repeated credit when identified by topic title.

Repeatable to: 30 credits if content differs.

ENPM818 Variable Topics in Engineering (3 Credits)

Variable topics selected by the faculty for students in the professional master of engineering and graduate certificate in engineering program. May be taken for repeated credit when identified by topic title.

Repeatable to: 30 credits if content differs.

ENPP - Engineering and Public Policy

ENRE - Reliability Engineering

ENRE447 Fundamentals of Reliability Engineering (3 Credits)

Provides a general survey of the techniques of reliability engineering with a focus on theoretical basis and quantitative methods, with frequent examples of application. Topics include mathematical definition of reliability, probabilistic models to represent failure phenomena, statistical life models for non-repairable components, reliability data analysis, failure modes and effects analysis, risk analysis, and system reliability models including fault trees, event trees. Students will learn how to apply these techniques to problems related to engineering systems, with example cases for process plants, energy systems and infrastructure.

Prerequisite: Minimum grade of C- in MATH141 and MATH246.

Restriction: Must be in Mechanical Engineering, Aerospace Engineering, Civil Engineering, or Fire Protection Engineering; or must be in the Nuclear Engineering minor; or permission of department.

ENRE489 Special Topics in Reliability Engineering (3 Credits)

Selected topics of current importance in reliability engineering.

Prerequisite: Permission of ENGR-Mechanical Engineering department.

Repeatable to: 6 credits if content differs.

ENRE600 Fundamentals of Failure Mechanisms (3 Credits)

Advanced failure mechanisms in reliability engineering will be taught from a basic materials and defects point of view. The methods of predicting the physics of failure of devices, materials, components and systems are reviewed. The main emphasis will be given to basic degradation mechanisms through understanding the physics, chemistry, and mechanics of such mechanisms. Mechanical failures are introduced through understanding fatigue, creep and yielding in materials, devices and components. The principles of cumulative damage and mechanical yielding theory are taught. The concepts of reliability growth, accelerated life testing, environmental testing are introduced. Physical, chemical and thermal related failures are introduced through a basic understanding of degradation mechanisms such as diffusion, electromigration, defects and defect migration. The failure mechanisms in basic material types will be taught. Failure mechanisms observed in real electronic devices and electronic packaging will also be presented. Problems related to manufacturing, and microelectronics will be analyzed. Mechanical failures are emphasized from the point of view of complex fatigue theory.

Cross-listed with: ENMA626.

Restriction: Permission of ENGR-Mechanical Engineering.

Credit Only Granted for: ENMA626, ENMA698M, ENMA698R, or ENRE600.

ENRE602 Principles of Reliability Analysis (3 Credits)

Principal methods of reliability analysis, including fault tree and reliability block diagrams; Failure Mode and Effects Analysis (FMEA); event tree construction and evaluation; reliability data collection and analysis; methods of modeling systems for reliability analysis. Focus on problems related to process industries, fossil-fueled power plant availability, and other systems of concern to engineers.

ENRE640 Collection and Analysis of Reliability Data (3 Credits)

Reliability data collection and analysis is of high (practical) importance in many essential engineering tasks including but not limited to: design alternatives evaluation, failure root cause analysis, early detection of field reliability problems, warranty reserve allocation, and others. The course teaches nonparametric and parametric statistical procedures of reliability data analysis for both non-repairable and repairable systems. It covers test data analysis (including accelerated and degradation testing), field data analysis (including warranty data and connected fleets data). Machine learning methods in reliability data analysis are discussed as well, along with special topics on condition-based maintenance and prognostics.

Prerequisite: ENRE602.

ENRE641 Probabilistic Physics of Failure and Accelerated Testing (3 Credits)

Models for life testing at constant stress. Graphical and analytical methods. Test plans for accelerated testing. Competing failure modes and size effects. Models and data analyses for step and time varying stresses. Optimizing of test plans.

ENRE642 Reliability Engineering Management (3 Credits)

Unifying systems perspective of reliability engineering management. Design, development and management of organizations and reliability programs including: management of systems evaluation and test protocols, development of risk management-mitigation processes, and management of functional tasks performed by reliability engineers.

ENRE645 Human Reliability Analysis (3 Credits)

Methods of solving practical human reliability problems, cognitive and behavioral modeling, task analysis, performance shaping factors, error classification, distribution of human performance and uncertainty bounds, sources of human error probability data, human error risk mitigation, examples and case studies.

ENRE648 Special Problems in Reliability Engineering (1-6 Credits)

For students who have definite plans for individual study of approved problems. Credit given according to extent of work.

Repeatable to: 6 credits if content differs.

ENRE655 Machine Learning Algorithms for Reliability Engineering (3 Credits)

Students learn representative machine learning algorithms with applications to reliability engineering. This course will cover model-based methods for reliability analysis, reliability model parameter estimation with both maximum likelihood approaches and Bayesian approaches, model selection, and model-based methods for health monitoring and reliability prediction. This course will also cover data-driven methods for reliability analysis, including neural networks, deep neural networks, random forest, support vector machines. Lastly, this course will cover topics on decision optimization based on reliability analysis, focusing on the Markov decision process and reinforcement learning.

Prerequisite: ENRE602.

ENRE670 Probabilistic Risk Assessment (3 Credits)

Why study risk, sources of risk, overview of Risk Assessment and Risk Management, relation to System Safety and Reliability Engineering; measures, representation, communication, and perception of risk; overview of use of risk assessment results in decision making; overview of Probabilistic Risk Assessment (PRA) process; detailed converge of PRA methods including (1) methods for risk scenario development such as identification of initiators, event sequence diagrams, event trees, causal modeling (fault trees, influence diagrams, and hybrid methods), and simulation approaches; (2) methods of risk scenario likelihood assessment, including quantitative and qualitative approaches, as well as uncertainty modeling and analysis. Also covers methods for risk modeling of system hardware behavior, physical phenomena, human behavior, software behavior, organizational environment, and external physical environment. Additional core topics include risk model integration and quantification (Boolean-based, binary decision diagram, Bayesian belief networks, and hybrid methods), simulation-based Dynamic PRA methods (discrete and continuous) and several examples of large scale PRAs for space missions, nuclear power, aviation and medical systems.

Prerequisite: ENRE602.

ENRE671 Risk Assessment in Engineering (3 Credits)

Introduction to risk management and decision-making, including uncertainty propagation, importance ranking, risk acceptance criteria, decision analysis and other decision-making techniques, risk communication.

Prerequisite: ENRE670.

ENRE682 Software Reliability and Integrity (3 Credits)

Defining software reliability, initiatives and standards on software reliability, inherent characteristics of software which determine reliability, types of software errors, structured design, overview of software reliability models, software fault tree analysis, software redundancy, automating tools for software reliability prototypes and real time software reliability.

ENRE684 Information Security (3 Credits)

This course is divided into three major components: overview, detailed concepts and implementation techniques. The topics to be covered are: general security concerns and concepts from both a technical and management point of view, principles of security, architectures, access control and multi-level security, trojan horses, covert channels, trap doors, hardware security mechanism, security models, security kernels, formal specifications and verification, networks and distribution systems and risk analysis.

Jointly offered with: ENME442.

Credit Only Granted for: ENME442 or ENRE684.

ENRE695 Design for Reliability (3 Credits)

Reliability is the ability of a product or system to perform as intended (i.e., without failure and within specified performance limits) for a specified time, in its life-cycle conditions. Knowledge of reliability concepts and principles, as well as risk assessment, mitigation and management strategies prepares engineers to contribute effectively to product development and life cycle management. This course teaches the fundamental knowledge and skills in reliability as it pertains to the design, manufacture, and use of electrical, mechanical, and electro-mechanical products. Topics cover the suitability of the supply chain members to contribute towards development, manufacturing, distribution and support of reliable products; efficient and cost-effective design and manufacture of reliable products; process capability and process control; derating, uprating, FMMEA, reliability prediction and reliability allocation; how to plan and implement product testing to assess reliability; how to analyze degradation, failure, and return data to estimate fundamental reliability parameters; root cause analysis; and reliability issues associated with warranties, regulatory requirements, and liabilities.

Cross-listed with: ENME695.

Credit Only Granted for: ENME695 or ENRE695.

ENRE770 Life Cycle Cost and System Sustainment Analysis (3 Credits)

This course melds elements of traditional engineering economics with manufacturing process and sustainment modeling, and life cycle cost management concepts to form a practical foundation for predicting the cost of products and systems. Various manufacturing cost analysis will be presented including: process-flow, parametric, cost of ownership, and activity based costing. The effects of learning curves, data uncertainty, test and rework processes, and defects will be considered. Aspects of system sustainment including the impact on the life cycle (and life cycle costs) of reliability, maintenance, environment impact, and obsolescence will be treated.

Credit Only Granted for: ENME770 or ENRE770.

ENRE798 Master's Non-Thesis Research (1-6 Credits)**ENRE799 Master's Thesis Research (1-6 Credits)****ENRE898 Pre-Candidacy Research (1-8 Credits)****ENRE899 Doctoral Dissertation Research (1-8 Credits)**

ENSE - Systems Engineering

ENSE621 Systems Engineering Concepts and Processes: A Model-Based Approach (3 Credits)

An INCOSE-oriented introduction to model-based systems engineering. Provides an overview of systems engineering concepts, processes and methods, with a particular focus on: the development of stakeholder and system requirements; characteristics of well-written requirements; the use of SysML software tools to develop of system- and element-level architectures; and the relationship between requirements and architecture. Architecture-related topics include specification and visualization of system attributes, behavior, and interfaces. Other topics include acquisition and development life cycle models; operational concepts and use cases; requirements and design traceability; analysis, modeling and simulation; systems engineering management; risk management; configuration management; systems-of-systems; and system complexity. The course includes a class project in which teams of 3-5 students use SysML to develop stakeholder requirements, system requirements, and a logical system architecture for an engineered system of interest to them and then perform a design trade-off analysis for some aspect of the system.

Restriction: Permission of ENGR-Institute for Systems Research.

Credit Only Granted for: ENPM641 or ENSE621.

ENSE622 System Trade-off Analysis, Modeling, and Simulation (3 Credits)

This course continues the model-based approach to systems engineering by introducing students to a variety of mathematical modeling and simulation techniques used to perform system performance, optimization, and trade-off analyses. Topics include: linear and integer programming; state machine models of finite state machines; development of simple intelligent agents; modeling Markov processes; queueing theory; multi-objective trade-off analyses; decision trees; stochastic (Monte Carlo) simulation, linear regression, some predictive analytic techniques; and an introduction to control theory. Mathematical models and simulations are developed and executed using MATLAB. The course includes a class project in which students solve a problem of interest to them using one or more of techniques addressed in class.

Prerequisite: Permission of ENGR-Institute for Systems Research; and ENSE621.

Recommended: Familiarity with calculus, probability, linear algebra, differential equations, & computer programming recommended.

Credit Only Granted for: ENPM642 or ENSE622.

ENSE623 System Development, Verification, and Validation (3 Credits)

This course completes the ENSE621, ENSE622 sequence. It covers system simulation development and a variety of verification and validation topics. It addresses development testing and operational testing; test methodologies; the planning of test programs and Test and Evaluation Master Plans (TEMPs); the planning and execution of tests; and the writing of test plans and test reports. Topics include verification methods; specification-based testing; test verification matrices; model-based verification; model checking and other formal approaches to verification; design of experiments; performance testing; reliability testing; usability/human factors testing; and other types of testing. The course includes a class project in which teams of 3-5 students: develop requirements for a simulation that supports a system analysis of interest (the user need); develop the simulation (in MATLAB); verify that it meets its requirements; and validate that it may be used to support the analysis of interest.

Prerequisite: Permission of ENGR-Institute for Systems Research; and ENSE622.

Credit Only Granted for: ENPM643 or ENSE623.

ENSE624 Human Factors in Systems Engineering (3 Credits)

This course covers the general principles of human factors, or ergonomics as it is sometimes called. Human Factors (HF) is an interdisciplinary approach for dealing with issues related to people in systems. It focuses on consideration of the characteristics of human beings in the design of systems and devices of all kinds. It is concerned with the assignment of appropriate functions for humans and machines, whether the people serve as operators, maintainers, or users of the system or device. The goal of HF is to achieve compatibility in the design of interactive systems of people, machines, and environments to ensure their effectiveness, safety and ease of use.

Restriction: Permission of ENGR-Institute for Systems Research.

Credit Only Granted for: ENPM644 or ENSE624.

ENSE626 System Life Cycle Analysis and Risk Management (3 Credits)

This course covers topics related to estimating the costs and risks incurred through the lifetimes of projects, products and systems. In addition, treatment is given to methods that determine the drivers of costs and risks and facilitate determination of the most effective alternatives to reducing them. Also covered, are relevant analytic tools from probability and statistics and also important managerial and organizational concepts. Extensive use is made of case studies and examples from industry and government.

Prerequisite: Permission of ENGR-Institute for Systems Research.

ENSE627 Systems Quality and Robustness Analysis (3 Credits)

This course covers systems engineering approaches for creating optimal and robust engineering systems and for quality assurance. It provides an overview of the important tools for quality analysis and quality management of engineering systems. These tools are commonly used in companies and organizations. Focus is placed on the Baldrige National Quality Program, ISO 9000 certification, six-sigma systems, and Deming total quality management to examine how high quality standards are sustained and customer requirements and satisfactions are ensured. The Taguchi method for robust analysis and design is covered and applied to case studies. Issues of flexible design over the system life cycle are addressed. Statistical process control, international standards for sampling, and design experimentation are also studied.

Restriction: Permission of ENGR-Institute for Systems Research.

Credit Only Granted for: ENPM647 or ENSE627.

ENSE698 Special Topics in Systems Engineering (3 Credits)

Prerequisite: ENSE621; and permission of ENGR-Institute for Systems Research.

Repeatable to: 6 credits if content differs.

ENSE699 Directed Study in Systems Engineering (1-3 Credits)

Directed study in Systems Engineering.

Prerequisite: ENSE621, ENSE622, and ENSE623.

Repeatable to: 3 credits if content differs.

ENSE799 Systems Engineering Thesis (1-6 Credits)

The application of systems engineering concepts, principles, and theories will be applied to the Master's Thesis project. Project/thesis work will be defined and selected early in student's program and supervised by a university faculty mentor.

Prerequisite: Permission of ENGR-Institute for Systems Research; and ENSE621; and must have 6 additional credits totaling 9 credit hours.

Repeatable to: 6 credits.

ENSP - Environmental Science and Policy

ENSP400 Capstone in Environmental Science and Policy (3 Credits)

Integration of physical, biological, and social sciences with applications to environmental science and policy. Problem-solving and multi-disciplinary case study evaluations pertinent to contemporary and future issues related to the environment.

Prerequisite: ENSP101; and ENSP102.

Restriction: Must be in Environmental Science and Policy program; and senior standing; and permission of the Environmental Science and Policy Program.

ENSP489 Special Topics in Environmental Science and Policy (1-3 Credits)

A lecture and or laboratory series organized to study a selected phase of Environmental Science and Policy not covered by existing courses. Credit according to time scheduled and organization of the course.

Repeatable to: 6 credits if content differs.

ENSP499 Honors Thesis Research (1-6 Credits)

Individual research, thesis, and oral defense. The research project will be conducted under the supervision of a faculty member.

Restriction: Must be in the ENSP Honors program; and permission of AGNR-Dean-Environmental Science & Policy Program.

Repeatable to: 6 credits.

ENSP699 Special Topics in Environmental Science and Policy (1-6 Credits)

Independent study course.

Prerequisite: Permission of AGNR-Dean-Environmental Science & Policy Program.

Restriction: Permission of instructor; and permission of AGNR-Dean-Environmental Science & Policy Program.

Repeatable to: 6 credits.

ENST - Environmental Science and Technology

ENST403 Invasive Species Ecology (3 Credits)

We will examine ecological, evolutionary, and anthropogenic processes facilitating or resisting biological invasions, and consider their environmental, economic, and human health impacts. We will consider various management strategies to mitigate invasions and identify areas of future research. Field trips and detailed discussion of recent findings and controversies in the literature will help illustrate fundamental concepts of invasions among various ecosystems.

Credit Only Granted for: ENST403, ENST603, or ENST689R.

ENST404 Ecological and Natural Resources Ethics (3 Credits)

Bridges science and management with ethical theory and concepts to help scientists, regulators, and managers understand how to deal with potential ethical dilemmas that arise in natural resource and environmental management implementation and policy development.

Prerequisite: ENST214 and ENST360.

Recommended: ENST314, ENST410, and ENST460.

Restriction: Senior standing or higher. Jointly offered with ENST604.

Credit Only Granted for: ENST604 or ENST404.

ENST405 Energy and Environment (3 Credits)

Introduction to the role of energy in environmental and human-dominated systems. Discussion of the historical and modern production and consumption of energy. Introduction to energy systems computer simulation and energy auditing.

Prerequisite: MATH140 or MATH120; or must have completed MATH220.

Restriction: Junior standing or higher. And must be in Environmental Sci & Tech program; or must be in Environmental Sci & Tech: Ecological Tech Design program; or must be in Environmental Sci & Tech: Environmental Health program; or must be in Environmental Sci & Tech: Soil & Watershed Science program; or must be in Environmental Sci & Tech: Natural Resources Mgmt program. Jointly offered with ENST605.

Credit Only Granted for: ENST405, ENSP350, ENST605, or MEES698Z.

ENST410 Ecosystem Services: An Integrated Analysis (3 Credits)

The importance of our ecosystems and the services they provide will be discussed. Basic principles used to analyze ecosystem services will be discussed and applied using case studies & field exercises. Forestland, wetlands and our marine resources are increasingly recognized for their ecosystem services provided to society, to include clean air and water, wildlife habitat, biodiversity, carbon storage and pollination services. This course will prepare students to deal with the complex issues involved in understanding those and other ecosystem services and their importance to society and environmental sustainability. Slowly, new markets are emerging for these services. Students will analyze the ecological, policy and financial dimensions of enhancing, restoring, and sustaining ecosystem services. New and on-going government programs and private business ventures will be discussed.

Prerequisite: ENST360 or BSCI361; or permission of instructor.

Restriction: Must be in one of the following programs (Environmental Sci & Tech: Ecological Tech Design; Environmental Sci & Tech; Environmental Sci & Tech: Natural Resources Mgmt; Environmental Sci & Tech: Soil & Watershed Science; Environmental Sci & Tech: Environmental Health).

ENST411 Principles of Soil Fertility (3 Credits)

Soil factors affecting plant growth and quality with emphasis on the bio-availability of mineral nutrients. The management of soil systems to enhance plant growth by means of crop rotations, microbial activities, and use of organic and inorganic amendments.

Prerequisite: ENST200; or students who have taken courses with comparable content may contact the department. Jointly offered with ENS T611.

Credit Only Granted for: ENST411 or NRSC411.

Formerly: NRS C411.

ENST414 Soil Morphology, Genesis and Classification (4 Credits)

Processes and factors of soil genesis. Taxonomy of soils of the world by U.S. System. Soil morphological characteristics, composition, classification, survey and field trips to examine and describe soils.

Prerequisite: Must have completed or be concurrently enrolled in ENST200.

ENST415 Renewable Energy (3 Credits)

An overview of renewable energy technologies and their current applications. Emphasis will be placed on technological readiness, efficiency and sustainability of renewable energy alternatives.

Technologies include solar thermal, photovoltaics, biodiesel, ethanol, anaerobic digestion, wind, hydroelectric, and microbial fuel cells.

Prerequisite: CHEM131, PHYS121, and MATH113; or permission of AGNR-Environmental Science & Technology department.

ENST417 Soil Hydrology and Physics (3 Credits)

A study of soil water interactions: the hydrologic cycle; the unique properties of water and soil; the soil components and their interactions; the field water cycle; transport processes involving water, heat and solutes; human effects on soil and groundwater; as well as the measurement, prediction, and control of the physical processes taking place in and through the soil.

Prerequisite: ENST200; and (MATH113 or MATH115).

ENST421 Soil Chemistry (4 Credits)

The chemistry and composition of mineral and organic colloids in soils, including ion exchange, oxidation-reduction, acidity, surface charge, and solution chemistry. Lectures and readings pertain to plant nutrition, waste disposal, and groundwater quality.

Prerequisite: ENST200.

ENST422 Soil Microbial Ecology (3 Credits)

The interdisciplinary study of soil microorganisms and their interactions with the mineral matrix; resulting in processes such as nutrient cycling, decontamination, and natural product production. We will focus on the diversity of soil communities, their survival strategies, and the new strategies used to study these communities.

Prerequisite: ENST200; or 1 course in BCHM; or must have completed a course in microbiology; or students who have taken courses with comparable content may contact the department.

Jointly offered with: ENST622.

ENST423 Soil-Water Pollution (3 Credits)

Reaction and fate of pesticides, agricultural fertilizers, industrial and animal wastes in soil and water with emphasis on their relation to the environment.

Prerequisite: ENST200.

ENST430 Wetland Soils (3 Credits)

The soils of wetlands including hydrology, chemistry, and genesis are discussed. Federal and regional guidelines for wetland soils are covered with an emphasis on validating interpretations through field observations.

Prerequisite: ENST200.

Credit Only Granted for: ENST430 or ENST630.

ENST432 Environmental Microbiology (3 Credits)

Microorganisms are everywhere and mediate many of the processes that we observe everyday. These organisms are the unseen catalysts for numerous industrial processes and are critical to many emerging technologies and novel products. Environmental microbiologists ask: How do microorganisms in the environment benefit society? This course will answer this question by examining microbes in bioremediation, food safety, climate change, and biotechnology.

Prerequisite: CHEM131 and CHEM132.

ENST434 Toxic Contaminants: Sources, Fate, and Effects (3 Credits)

Study of the release to the environment, transport through natural compartments, persistence and ultimate fate of various classes of contaminants produced as a result of human activities. Topics will culminate in discussions of impacts to wildlife and human health. Students should emerge with a practical appreciation of the actual risks from exposure to a variety of environmental contaminants and an understanding of the environmental and human health implications of continuing the contaminating activities.

Prerequisite: ENST333 and ENST334.

ENST436 Emerging Environmental Threats (3 Credits)

Examine new and potential environmental concerns in the air, water, soil, space, and the built environment. Emphasis on studying the intrinsic links between ecosystem and human health. Topics will include climate change, resource consumption, biodiversity change, infectious disease, non-traditional pollutants, and other complex and significant environmental concerns.

Prerequisite: ENST233; or permission of AGNR-Environmental Science & Technology department.

ENST441 Sustainable Agriculture (3 Credits)

Environmental, social and economic needs for alternatives to the conventional, high-input farming systems which currently predominate in industrial countries. Strategies and practices that minimize the use of non-renewable resources.

ENST445 Ecological Risk Assessment (3 Credits)

Assessment of ecological impacts of perturbations on natural systems. Course will describe methods for estimating environmental impacts including extrapolating from laboratory and field data. The role of regulatory agencies and implications of scientific uncertainty on risk management will be covered.

Prerequisite: ENST360 or BSCI361; and (BIOM301 and ENST334). Or permission of AGNR-Environmental Science & Technology department.

ENST450 Wetland Ecology (3 Credits)

Plant and animal communities, biogeochemistry, and ecosystem properties of wetlands. Lectures are supplemented by field trips and in-class labs. Hands-on activities include identification of wetland plant species, wetland delineation, and collection and analysis of field data on wetland vegetation, soil, and hydrology. Wading boots (at least hip length) are strongly recommended.

Prerequisite: BIOM301 and ENST360, or equivalent courses in data analysis and ecology; or permission of AGNR-Environmental Science & Technology department.

Jointly offered with: ENST650.

Credit Only Granted for: ENST450, ENST650, or MEES650.

ENST452 Wetland Restoration (3 Credits)

Design, construction, and evaluation of wetlands restored or created to provide ecosystem services or to mitigate losses due to development. Topics include fundamental properties of wetlands, ecological restoration theory, site selection and goal-setting, design plans, practices for establishing wetland hydrology, substrate, and vegetation, and restored ecosystem monitoring.

Prerequisite: (BSCI160 and BSCI161; or BSCI106); and (BSCI362, ENST450, ENST360, or BSCI361).

ENST453 Watershed Science: Water Balance, Open Channel Flow, and Near Surface Hydrology (3 Credits)

Definition and delineation of watersheds based on the stream orders. Discussion of the principle of conservation of mass in the context of life cycles (water cycle, carbon cycle, photosynthesis, aerobic cycle, anaerobic cycle, and nitrogen cycle) as it relates to our Biosystem. Conceptual study of hydrologic cycle components and their prediction using empirical and physical-based models is covered. Role of water as the dynamic force within the context of its interaction with landscapes of diverse geology and land cover will be discussed. Elements of watershed management is discussed.

Prerequisite: MATH120, ENST200, GEOG306 or BIOM301.

Recommended: PHYS121.

Credit Only Granted for: ENST453 or ENST653.

ENST456 Spatial Analysis and Ecological Sampling (3 Credits)

Teaches ENST students ecological sampling methods and applied spatial analysis skills. Students will work in small groups on research projects they develop and test during the semester. Students will develop a research hypothesis, test their hypothesis, display it visually in QGIS, and analyze it with appropriate statistical methods in QGIS and R Studio culminating in a final presentation.

Recommended: GEOG306 and GEOG373.

Restriction: Senior standing or higher; and permission of instructor.

Additional Information: Students will need to provide an 8GB (or larger) thumb drive for data storage.

ENST460 Principles of Wildlife Management (3 Credits)

Ecological principles and requirements of wildlife as basis for management, and introduction to the scientific literature. Conflicts in wildlife management, government administration of wildlife resources, legislation, and history of the wildlife management profession.

Prerequisite: Must have completed two semesters of biology laboratory; and (ENST360; or BSCI361). Or permission of AGNR-Environmental Science & Technology department.

ENST461 Urban Wildlife Management (3 Credits)

Ecology and management of wildlife in urban areas. For students in biological sciences, geography, landscape design, natural resources management, recreation and urban studies. Planning, design, and wildlife conservation in landscape ecology. Public attitudes, preferences, and values, review of private conservation organizations.

ENST462 Field Techniques in Wildlife Management (3 Credits)

Hands-on experience with field techniques in wildlife management focusing on various methods of conducting indices, estimates, and censuses of wildlife populations. Includes capture and handling of amphibians, reptiles, birds, and mammals by use of drift fences, cover boards, mist nets, box traps, and dart guns.

Prerequisite: ENST460. And BSCI160 and BSCI161; or BSCI106. And BSCI170 and BSCI171; or BSCI105.

Recommended: ENST461.

Restriction: Permission of AGNR-College of Agriculture & Natural Resources.

ENST470 Ideas into Impact (3 Credits)

This will be a capstone-type course based around developing proposals for projects emphasizing research, monitoring, design, restoration, management, entrepreneurship, or other approaches to ecological or environmental questions, issues, or problems.

Restriction: Junior or Senior standing only; Permission of AGNR-Environmental Science & Technology department.

ENST472 Capstone (3 Credits)

This capstone course focuses on professional project preparation, presentation, and critical evaluation on environmental science research. Students will develop and present original projects and critique projects presented by others.

Restriction: Must be in a major within AGNR-Environmental Science & Technology department; and permission of AGNR-Environmental Science & Technology department.

Additional Information: This is the pinnacle course for students majoring in ENST and is therefore recommended in one of the students' final semesters.

ENST481 Ecological Design (4 Credits)

An advanced survey course on the field of ecological design. Principles of design are illustrated with case studies from biologically-based waste treatment systems, ecosystem management and sustainable development. Concepts covered include ecology, ecological engineering, nutrient cycling, energy, lifecycle analysis, and design process.

Technologies include treatment wetlands, living machines, anaerobic digestion, rain gardens, bioswales, bioremediation, algal turf scrubbers, and green building design.

Prerequisite: (MATH120 or MATH140; or must have completed MATH220); and (PHYS121 and CHEM131); and (BSCI361; or students who have taken courses with comparable content may contact the department). Or permission of instructor.

Jointly offered with: MEES681.

Restriction: Permission of AGNR-Environmental Science & Technology department.

Credit Only Granted for: ENST481, ENST681, or MEES681.

ENST485 Water Management in Urban Environment (3 Credits)

Historically, with the exception of certain locations, water has been available in sufficient quantities, and providing supporting infrastructure has been relatively straightforward. In urban areas, the concentration of people and the drastic changes in land use, have altered the fluxes of water, sediments, chemicals, and microorganisms. As the population increases and the number of large urban areas keeps growing (both in U.S. and internationally), managing water in urban areas is becoming more challenging. Water must be supplied for domestic, commercial, and industrial use, as well as irrigation and maintaining and enhancing local environments (e.g., urban streams). In addition, stormwater must be managed to prevent flooding and environmental damage, and used water, which contains organic matter, nutrients, and other constituents that can be extracted and reused, must be collected and managed. In this course we take a systems approach to urban water hydrology, engineering, planning and management. We will explore urban water cycle, urban runoff and drainage characteristics, urban water supply and demand, stormwater collection and treatment and designing best management practices. Additionally, we look at the climate impacts on the urban water cycle.

Prerequisite: MATH120, MATH130, MATH136, or MATH140.

ENST486 Senior Professional Experience (3 Credits)

Students will arrange an off-campus professional-level work experience related to Environmental Science and Technology (ENST) to develop expertise in a specific area of their ENST concentration curriculum. Classroom sessions will frame student experiences within the broader discipline of Environmental Science and Technology. This course will tie together current practices in the ENST career industry, proposal writing, critical analysis, and culminate in a final paper and presentation.

Prerequisite: ENST389.

Restriction: Must be in the Environmental Science and Technology program; and permission of AGNR-Environmental Science & Technology department.

Additional Information: The course has two types of activities: lecture and experiential learning. Students are expected to work on their professional-level experience for 90 hours and participate in a 2-hour lecture every other week, during the semester to develop their Senior Integrative Experience (SIE) project. Each student's research question, proposal methodology, analysis, paper, and presentation will follow learning outcomes of all ENST SIE course options.

ENST487 Environmental Conflicts and Decision Making (2 Credits)

Study major cases which focus on environmental science with concentration on the role and techniques of negotiation, collaborative decision making, and adaptive resource management as an environmental conflict resolution process.

Restriction: Senior standing. And must be in one of the following programs (Environmental Sci & Tech: Natural Resources Mgmt; Environmental Sci&Pol-Wildlife Ecology & Mgmt); or permission of AGNR-Environmental Science & Technology department.

ENST489 Research Experience (3 Credits)

An advanced research-based course in the field of environmental science and technology.

Restriction: Permission of AGNR-Environmental Science & Technology department.

Repeatable to: 6 credits.

ENST499 Special Topics in Environmental Science and Technology (1-4 Credits)

An independent study, and/or lecture, and/or laboratory series organized to study a selected phase of Environmental Science and Technology not covered by existing courses. Credit arranged with supervising faculty member.

Restriction: Permission of AGNR-Environmental Science & Technology department.

ENST602 Research Principles and Methodology in Environmental Science and Technology (3 Credits)

Fundamental research strategies and methods of investigation in Environmental Science and Technology including field and laboratory procedures.

Restriction: Must be in Environmental Sci & Tech program.

ENST603 Advanced Invasive Species Ecology (3 Credits)

We will examine ecological, evolutionary, and anthropogenic processes facilitating or resisting biological invasions, and consider their environmental, economic, and human health impacts. We will consider various management strategies to mitigate invasions and identify areas of future research. Field trips and detailed discussion of recent findings and controversies in the literature will help illustrate fundamental concepts of invasions among various ecosystems. Jointly offered with ENST403.

Credit Only Granted for: ENST403, ENST603, or ENST689R.

Formerly: ENST689R.

Additional Information: Two field trips are planned for this class.

ENST604 Advanced Ecological and Natural Resource Ethics (3 Credits)

Bridges science and management with ethical theory and concepts to help scientists, regulators, and managers understand how to deal with potential ethical dilemmas that arise in natural resource and environmental management implementation and policy development.

Prerequisite: ENST214 and ENST360.

Recommended: ENST314, ENST410, and ENST460.

Credit Only Granted for: ENST404 or ENST604.

ENST605 Energy and Environment (3 Credits)

Role of energy in environmental and human-dominated systems and their linkage. Discussion of the historical and modern production and consumption of energy. Energy systems simulation modeling, energy analysis and energy auditing. Review of national energy policies and proposed alternatives.

Prerequisite: MATH120; or must have completed MATH220; or students who have taken courses with comparable content may contact the department. Jointly offered with ENST405.

Credit Only Granted for: ENST405, ENST605, or MEES698Z.

Formerly: MEES698Z.

ENST606 Advanced Ecosystem Health and Natural Resource Management (3 Credits)

Explore some of the most important and current global environmental and health challenges. Investigate fundamental and new concepts from the fields of ecology, eco-epidemiology, social anthropology, and environmental and health policy, as well as interdisciplinary cross-sectorial approaches such as One Health, Eco-Health, and Planetary Health.

Restriction: Permission of AGNR-Environmental Science & Technology department.

Credit Only Granted for: ENST606 or ENST689E.

Formerly: ENST689E.

Additional Information: Priority in enrollment will be given to students in ENST program.

ENST607 Adaptation and Resilience in Cities (3 Credits)

Knowledge about the relations between urbanization and global and local challenges, such as climate change, biodiversity loss, resource deficiency, poverty, justice and health, is of key importance to move towards sustainable development and resilient systems. This course takes a trans-disciplinary approach to understanding urban questions. Urban possibilities and challenges are analyzed by using a systems approach where ecological, social, and economic aspects are integrated through a social-ecological perspective to analyze resilience and sustainability. Linkages between and perspectives from science, social-sciences, and practice are emphasized throughout the course.

Prerequisite: ENST360.

Restriction: Must be a graduate student; or permission of AGNR-Environmental Science & Technology department.

Credit Only Granted for: ENST607 or ENST689C.

Formerly: ENST689C.

ENST608 Research Methods (1-4 Credits)

Development of research viewpoint by detailed study and report on crop and soil research of the Maryland Agriculture Experiment Station or review and discussion of literature on specific agricultural problems or new research techniques.

Restriction: Permission of AGNR-Environmental Science & Technology department.

Repeatable to: 4 credits if content differs.

Credit Only Granted for: ENST608 or NRSC608.

Formerly: NRSC608.

ENST611 Advanced Principles of Soil Fertility (3 Credits)

Soil factors affecting plant growth and quality with emphasis on the bio-availability of mineral nutrients. The management of soil systems to enhance plant growth by means of crop rotations, microbial activities, and use of organic and inorganic amendments.

Prerequisite: ENST200; or students who have taken courses with comparable content may contact the department.

Jointly offered with: ENST411.

Credit Only Granted for: ENST411 or ENST611.

ENST622 Advanced Soil Microbial Ecology (3 Credits)

The interdisciplinary study of soil microorganisms and their interactions with the mineral matrix; resulting in processes such as nutrient cycling, decontamination, and natural product production. We will focus on the diversity of soil communities, their survival strategies, and the new strategies used to study these communities. The course will include an examination of current literature in this field.

Prerequisite: ENST200; or 1 course in BCHM; or must have completed one course in microbiology; or students who have taken courses with comparable content may contact the department. Jointly offered with ENST422.

Credit Only Granted for: ENST422 or ENST622.

ENST630 Advanced Wetland Soils (3 Credits)

The soils of wetlands including hydrology, biogeochemistry, and pedogenesis, including a focused discussion of current literature. Federal and regional guidelines for wetland soils are covered with an emphasis on validating interpretations through field observations.

Prerequisite: ENST200.

Credit Only Granted for: ENST630, ENST430, or NRSC461.

ENST640 Advanced Crops, Soils, and Civilization (3 Credits)

Explore the rise, cycling, resilience, and decline of civilizations and apply learning to modern issues in the fields of sustainability, environmental ethics, natural resource management, and agriculture. Role and importance of crop and soil resources in the development of human civilization. History of crop and soil use and management as they relate to the persistence of ancient and modern cultures. Jointly offered with ENST440.

Credit Only Granted for: ENST440 or ENST640.

ENST643 Advanced Industrial Ecology (3 Credits)

Problems of waste management and recycling in human societies are covered. The industrial ecology approach to design is contrasted with analogous patterns and processes from natural ecosystems.

Prerequisite: BSCI361; and permission of AGNR-Environmental Science & Technology department.

Jointly offered with: ENST443.

Credit Only Granted for: ENST443 or ENST643.

ENST645 Water and Development: A Global Challenge (3 Credits)

Broad study of water systems by integrating elements of environmental sciences, engineering, and policy analysis. Explore several real-world case studies, focusing on practical approaches for developing and managing water resources and derivative services. Review advanced methodologies for quantitative and qualitative policy analysis. Design management policies pertaining to complex water systems.

Prerequisite: MATH120, MATH220 or MATH140 (students who have taken courses with comparable content may contact the faculty).

Credit Only Granted for: ENST689P or ENST645.

Formerly: ENST689P.

ENST650 Advanced Wetland Ecology (3 Credits)

Plant and animal communities, biogeochemistry, and ecosystem properties of wetlands. Lectures are supplemented by field trips (normally 2 days total during the semester) and in-class labs. Hands-on activities and exercises include identification of wetland plant species, wetland mapping and delineation, and collection and analysis of field data on wetland vegetation, soil, and hydrology. Wading boots (at least hip length) are strongly recommended.

Prerequisite: BIOM301; and ENST360 or other ecology equivalent; or permission of AGNR-Environmental Science and Technology department; or permission of CMNS-Marine & Estuarine-Environmental Science Program).

Cross-listed with: MEES650.

Jointly offered with: ENST450, MEES650.

Credit Only Granted for: ENST450, ENST650, or MEES650.

Additional Information: Wading boots (at least hip length) are strongly recommended.

ENST681 Advanced Ecological Design (3 Credits)

An advanced survey course on the field of ecological design. Principles of design are illustrated with case studies from biologically-based waste treatment systems, ecosystem management and sustainable development.

Prerequisite: Must have completed one semester of calculus; and (CHEM131 and PHYS121). Or permission of instructor. Cross-listed with M EES681.

Credit Only Granted for: ENST481, ENST681, or MEES681.

ENST689 Special Topics (1-3 Credits)

Credit according to time scheduled and organization of the course. Organized as a lecture series on a specialized advanced topic.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: ENST689 or NRSC689.

Formerly: NRSC689.

ENST702 Environmental Science and Technology: Communication and Professional Development (2 Credits)

Training in communication and professional development to prepare students to succeed in careers within the fields of environmental science and technology. Topics will include manuscript and technical writing, job search, communication with academic and non-academic audiences, multi-disciplinary collaboration, management (project, personnel, time), professionalism, leadership, ethics, and career opportunities. Course emphasizes practical training through facilitated discussions and critique practicums.

Prerequisite: ENST602.

Restriction: Must be in Environmental Science and Technology (Master's) program; or must be in Environmental Science and Technology (Doctoral) program; or permission of instructor.

ENST722 Advanced Soil Chemistry (3 Credits)

A continuation of AGRO 421 with emphasis on soil chemistry of minor elements necessary for plant growth.

Restriction: Permission of instructor; and permission of AGNR-Environmental Science & Technology department.

Credit Only Granted for: ENST722 or NRSC722.

Formerly: NRSC722.

ENST761 Methods in Pedological Investigations (4 Credits)

This is designed to equip students with analytical tools for soil microfabric and mineralogical analysis in order to understand soil properties and processes. A number of techniques will be discussed, but emphasis will be placed on micromorphology and x-ray diffractometry. Both theoretical and applied considerations will be covered, and students will gain substantial hands on experience in collecting and interpreting data germane to their research interests.

Prerequisite: ENST414; or permission of AGNR-Environmental Science & Technology department.

ENST789 Advances in Research (1-4 Credits)

A study of recent advances in agronomy research.

Repeatable to: 4 credits if content differs.

Credit Only Granted for: ENST789 or NRSC789.

Formerly: NRSC789.

ENST798 Graduate Seminar (1 Credit)

Designed to provide a venue for interactive discussion between ENST graduate students and other members of the ENST community regarding thesis/dissertation research planned or conducted as part of the students graduate program.

Restriction: Must be in one of the following programs (Environmental Science and Technology (Doctoral); Environmental Science and Technology (Master's)); or permission of AGNR-Environmental Science & Technology department.

Repeatable to: 6 credits.

Credit Only Granted for: ENST798 or NRSC798.

ENST799 Master's Thesis Research (1-6 Credits)**ENST821 Advanced Methods of Soil Investigation (3 Credits)**

First semester, alternate years. An advanced study of the theory of the chemical methods of soil investigation with emphasis on problems involving application of physical chemistry.

Credit Only Granted for: ENST821 or NRSC821.

Formerly: NRSC821.

ENST831 Soil Mineralogy (4 Credits)

Soil minerals, with emphasis on clay minerals, are studied from the viewpoint of soil genesis and physical chemistry. Mineralogical analyses by x-ray and chemical techniques.

ENST832 Advanced Soil Physics (3 Credits)

An advanced study of physical properties of soils.

Restriction: Permission of instructor; and permission of AGNR-Environmental Science & Technology department.

Credit Only Granted for: ENST832 or NRSC832.

Formerly: NRSC832.

ENST898 Pre-Candidacy Research (1-8 Credits)**ENST899 Doctoral Dissertation Research (1-8 Credits)**

ENTM - Entomology

ENTM609 Integrated Pest Management (1-4 Credits)

A modular course with an interdisciplinary approach to the theory and practice of integrated pest management. Topics of modules, each 3-4 weeks long, vary each semester over a three year time frame, with the first module serving as a prerequisite for all other modules.

Restriction: Permission of instructor.

Repeatable to: 10 credits if content differs.

ENTM612 Insect Ecology (3 Credits)

An advanced course in plant-insect interactions, population and community ecology, insect biogeography and macroevolution, and their applications. Emphasis on primary literature, both foundational and contemporary.

Prerequisite: Permission of CMNS-Entomology department; or must have completed a course in general ecology.

ENTM622 Principles of Systematic Entomology (3 Credits)

The principles of systematics including traditional classification methods, cladistics, and numerical taxonomy. Nomenclature, continental drift, and speciation theory. A laboratory problem in systematics is required.

ENTM667 Aquatic Entomology (3 Credits)

Biology, ecology, and taxonomy of aquatic insects in lotic and lentic habitats, their adaptation to aquatic life, their function in aquatic ecosystems, and their relationship to environmental deterioration.

ENTM699 Advanced Entomology (1-6 Credits)

Credit and prerequisites to be determined by the department. First and second semesters. Studies of minor problems in morphology, physiology, taxonomy and applied entomology, with particular reference to the preparation of the student for individual research.

ENTM701 Teaching & Professional Development in Biology (1 Credit)

Provides graduate students in the biological sciences with the foundational knowledge to become better teaching assistants and gives them an introduction into the skills and tools that they need to develop as professional scientists and educators.

Cross-listed with: BISI701.

Credit Only Granted for: ENTM701, BISI688Z, CBMG688Z, or BIOL701.

Formerly: BISI688Z, CBMG688Z, BIOL701.

Additional Information: Priority enrollment will be given to students in the BISI Graduate Program.

ENTM710 Insect Biodiversity, Physiology and Ecology (3 Credits)

A survey course discussing the various families of insects, discuss their anatomy and physiology, and their role in ecological systems. Students will examine the ecological and evolutionary perspectives on interactions between plants and vertebrate and invertebrate animals. Further, it explores the applied consequences of animal-plant interactions to agroecology and conservation biology. These goals are achieved by reviewing the theoretical underpinnings of animal-plant interactions, and exposing students to research literature on animal-plant interactions.

ENTM720 Native, Invasive, and Exotic Species (3 Credits)

This course will examine introduced species impact, how invasive and exotic species spread, their impact of native species and methods of invasive species control.

ENTM725 IPM Practices (3 Credits)

Introduction to the techniques of integrated pest management for proper pest control management. Integrated Pest Management (IPM) has been the most successful management paradigm for agriculture, forestry, and urban pest management for more than five decades. Students will learn the fundamental elements of IPM programs including recognition and monitoring of key pests, formation of decision-making guidelines, intervention tactics, and fundamentals of assessment.

ENTM730 Plant Diagnostics (3 Credits)

The first step to managing pest and disease problems in plants is an accurate diagnosis. In this course, students will learn about the various biotic (living) and abiotic (nonliving) factors that can contribute to plant problems, and how to evaluate evidence and distinguish between these factors to arrive at an accurate diagnosis.

ENTM735 Sustainability (3 Credits)

Application of the concept of sustainability to both ecosystem services provided by beneficial insects, as well as the management of injurious insects. Ecological functions of insects in the natural and anthropogenic landscape will be illustrated and discussed. In addition, case histories and discussions will focus on themes of sustainability in successful IPM programs, as well as specific practices that lead to sustainable agriculture. The course will conclude with the development of a list of sustainable practices for conserving and managing insects in the landscape.

ENTM740 Organic Practices (3 Credits)

Alternatives to chemical pesticides, what being certified organic entails and how these practices relate to ecological principles. This course will discuss various natural processes that occur in the farm setting to determine the best practices to maintain biodiversity and successful crop production.

ENTM745 Bee Biology and Beekeeping (3 Credits)

Students will be introduced to the anatomy and physiology of the honey bee colony with emphasis on how to use this information to best manage honey bee colonies.

ENTM746 Commercial Beekeeping (3 Credits)

An overview of the various components of the commercial beekeeping industry including migratory pollinators, queen rearing operations and honey producers will be explored.

ENTM747 Pollinator Health (3 Credits)

Students will be given an overview of the importance of insect pollinators and threats to their populations. Emphasis will be placed on managed pollinators, particularly but not exclusively honey bees, where disease mitigation plans will be highlighted.

ENTM751 The History and Culture of Bees and Beekeepers (3 Credits)

An exploration of the history of beekeeping in culture and literature. A comparison of past and present beekeeping practices in different regions of the world will be highlighted.

ENTM756 Insect Diseases and Pathology (3 Credits)

Integrates aspects of biochemistry, molecular biology and evolution theory with ecology using pathogens of insects as a model. The various biotic (living) and abiotic (nonliving) factors that can contribute to plant problems. Explores the direction and goals of innovation in microbial biocontrol as well as the effect of social criticism and considerations of environmental impact on attempts to introduce engineered microorganisms.

Credit Only Granted for: ENTM715 or ENTM756.

Formerly: ENTM715.

ENTM760 Insects in the 21st Century (3 Credits)

This course will explore the influence and impact of major technological advances in genetics, molecular genetics and biotechnology on the study of insects. Topics will include the use of insects as models for studying human biology and diseases; the use of genetics and genetic technologies to augment existing strategies for managing pest insects and well as the invention of novel management approaches; the use of genetics and genetic technologies in the fields of insect conservation, ecology and evolution.

ENTM769 Capstone: Scholarly Paper (3 Credits)

An examination of the current literature on topics related to the field of applied entomology. The Capstone Course provides the opportunity to apply and integrate best practices based on current research in the form of a formal scholarly paper.

ENTM788 Entomological Topics (1-3 Credits)

One lecture or one two-hour laboratory period a week for each credit hour. Lectures, group discussions or laboratory sessions on selected topics such as: aquatic insects, biological control of insects, entomological literature, forest entomology, history of entomology, insect biochemistry, insect embryology, immature insects, insect behavior, insect communication, principles of entomological research.

Prerequisite: Permission of CMNS-Entomology department.

ENTM789 Field Experience in Pest Management (1-6 Credits)

Involvement in practical problems of pest management in field situations. The student will be assigned to a problem area for intensive experience, usually during the summer. A final written report is required for each assignment.

Repeatable to: 6 credits.

ENTM798 Topic Seminar (1 Credit)

Discussion and presentation of current research and literature.

Prerequisite: Permission of CMNS-Entomology department.

ENTM799 Master's Thesis Research (1-6 Credits)**ENTM898 Pre-Candidacy Research (1-8 Credits)****ENTM899 Doctoral Dissertation Research (1-8 Credits)**

ENTS - Telecommunications

ENTS609 Telecommunications Project (3 Credits)

Consists of a student project in the area of telecommunication system applications, management, or policy. Specific projects will be supervised individually by faculty members associated with the M.S Program in Telecommunications.

ENTS622 Introduction to Digital Communication Systems (3 Credits)

Principles of analog and digital communication systems design. Analysis of the performance and relative merits of different modulation and demodulation, signal processing, filtering and error control schemes in communication systems. Also provides an understanding of the design of modern digital communication systems.

Restriction: Must be in Telecommunications (Master's) program; or permission of ENGR-Electrical & Computer Engineering department.

Credit Only Granted for: ENTS622 or ENTS689B.

Formerly: ENTS689B.

ENTS625 Management and Organizational Behavior in the Telecommunications Industry (3 Credits)

Roles of the general manager in: determining target markets and designing strategies for them; formulating and implementing corporate and business level strategies; and staffing, developing, and managing human resources and coordinating them with the organization's financial and physical resources. Also emphasizes the building of interpersonal skills with respect to the selection of members for work teams and team formation, leadership of teams toward the achievement of strategic goals and total quality, the development and motivation of team members, and the evaluation of team and individual performance.

ENTS629 Special Topics in Cybersecurity (3 Credits)

Selected topics of current importance in cybersecurity.

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits if content differs.

ENTS630 The Economics of International Telecommunications (3 Credits)

Basic microeconomic principles used by telecommunications firms, including supply and demand, elasticity, costs, productivity, pricing, market structure and competitive implications of alternative market structures. Market failures and government intervention. Public policy processes affecting business operations.

Restriction: Must be in Telecommunications (Master's) program.

ENTS632 Telecommunications Marketing Management (3 Credits)

Topics covered include strategic marketing, sales and customer service challenges confronting organizations in the computer, communications and media industries. The course also addresses volatile technology, regulatory and competitive environments as a backdrop to strategic planning and management in the marketing domain.

Restriction: Must be in Telecommunications (Master's) program.

ENTS635 Decision Support Methods for Telecommunication Managers (3 Credits)

The aim of this course is to introduce management science techniques for informed decision making. Topics covered can include data analysis and regression, optimization models and applications (workforce scheduling, manufacturing, network design, facility location), sensitivity analysis, decision trees, risk analysis and business simulation models. Emphasis will be on telecommunications managerial problems, model development and the use of software packages for decision support.

Restriction: Must be in Telecommunications (Master's) program.

ENTS639 Special Topics in Business (3 Credits)

Selected topics of current importance in business.

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits if content differs.

ENTS640 Networks and Protocols I (3 Credits)

An overview of design issues and the important industry standards for digital communications networks. This includes protocols, data communications technologies, error correction and detection, congestion control, traffic routing, Local Area Network (LAN) protocols, TCP/IP, and some security issues.

Restriction: Must be in Telecommunications (Master's) program.

ENTS641 Networks and Protocols II (3 Credits)

Techniques for the specification, design, analysis, verification and testing of communication protocols are discussed. The course includes detailed discussion on routing protocols in the Internet. This includes Routing Information Protocol (RIP), Enhanced Interior Gateway Routing Protocol (EIGRP), Open Shortest Path First (OSPF), and Border Gateway Protocol (BGP4).

Prerequisite: ENTS640.

Restriction: Must be in Telecommunications (Master's) program.

ENTS649 Special Topics in Networking (3 Credits)

Selected topics of current importance in networking.

Restriction: Must be in Telecommunications (Master's) program.

ENTS653 AWS/PCS System Implementation (3 Credits)

Engineering issues associated with designing and deploying a AWS/PCS cellular wireless communications system in the current world environment will be examined. The course will focus on implementation issues such as the impact of real world concerns on the deployment strategy and the use of good engineering practice to overcome obstacles. Students will create and modify mock deployments using professional tools for cell planning and interference analysis. Students will also be exposed to drive testing tools and concepts for migration to future technologies.

Restriction: Must be in Telecommunications (Master's) program.

ENTS654 Optimization and Analysis of GSM Networks (3 Credits)

The techniques needed to successfully optimize a functioning GSM network will be examined. Students will conduct extensive drive tests of a working network in the Washington DC area using state-of-the-art drive test equipment and will analyze the recorded data with post-processing analysis tools. Also, they will learn to recognize problems based on network behaviors and what courses of action are available to correct them. Lab work and data collection will constitute a majority of the class work.

Prerequisite: ENTS656 or ENTS653; and permission of ENGR-Electrical & Computer Engineering department.

Restriction: Must be in Telecommunications (Master's) program.

Credit Only Granted for: ENTS654 or ENTS689B.

ENTS656 Introduction to Cellular Communication Networks (3 Credits)

Concepts and techniques involved in wireless digital communications with emphasis on cellular and PCS systems. Properties of Mobile radio channels; intersymbol interference, multipath, and fading effects; interleaving and diversity; multiple access schemes (TDMA, FDMA, CDMA); interuser interference, traffic issues, and cell capacity; power control strategies; frequency reuse and channel assignment; handoff, paging, and location update; cell layout; introduction to cellular and PCS standards.

ENTS657 Satellite Communication Systems (3 Credits)

An examination of satellite telecommunication systems with an emphasis on the mobile satellite systems (MSS). Topics will include a historical perspective, orbital mechanics and constellations, choice of orbital parameters, propagation considerations, link budgets, interference issues and other obstacles, and existing and proposed mobile satellite systems. It will also look at some of the business aspects such as the cost of deploying and maintaining these systems.

Credit Only Granted for: ENTS657 or ENTS689S.

Formerly: ENTS689S.

ENTS659 Special Topics in Communications (3 Credits)

Selected topics of current importance in communications.

Restriction: Must be in Telecommunications (Master's) program.

ENTS669 Special Topics in Computing (3 Credits)

Selected topics of current importance in computing.

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits.

ENTS670 Introduction to Business and Entrepreneurship (3 Credits)

This is a fundamental course that provides a broad introduction to various business issues faced by any small business or startup. Course instructors present the key issues involved in outlining a clear value proposition and profitable business model, managing and monitoring finances, developing a winning team, addressing legal considerations, executing on operations including marketing sales, manufacturing and service.

Restriction: Must be in Telecommunications (Master's) program.

Credit Only Granted for: ENTS670 or ENTS689J.

ENTS673 Project Management for Telecommunications (3 Credits)

Introduces modern project management. Begins with an overview and expands into Adaptive and Extreme project management. The focus then shifts to the individual skills required to be an effective project manager, such as time management, leadership and motivation. Once skills of the individual have been addressed, social networks and how they impact project management are examined.

Formerly: ENTS689P.

ENTS689 Special Topics in Telecommunications (3 Credits)

Selected topics of current importance in telecommunications.

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits if content differs.

ENTS699 Independent Study in Telecommunications (1-3 Credits)

Individual instruction course. See ENTS program office for section number.

Repeatable to: 3 credits if content differs.

ENTS749 Advanced Topics in Networking (3 Credits)

Selected advanced topics in networking.

Prerequisite: ENTS640 or ENTS641; or permission of instructor.

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits if content differs.

ENTS759 Advanced Topics in Communications (3 Credits)

Selected advanced topics in communications.

Prerequisite: ENTS622; or students who have taken courses with comparable content may contact the department. And (ENTS656 or ENTS653).

Restriction: Must be in Telecommunications (Master's) program.

Repeatable to: 18 credits if content differs.

EPIB - Epidemiology and Biostatistics

EPIB400 Obesity: An Epidemiologic Perspective (3 Credits)

The epidemic of obesity, its causes and consequences, and issues related to energy balance will be covered. Students will characterize the obesity epidemic both nationally and internationally, compare and contrast the metrics of obesity, understand the biological consequences of different obesity phenotypes, and describe characteristics of the obesogenic environment. Throughout the course students will be introduced to the application of epidemiological methods to studies of obesity.

Prerequisite: 1 course with a minimum grade of C- from (EPIB301, HLTH301).

EPIB463 Introduction to Programming in R (3 Credits)

An introduction to basic programming in R; including principles, data analysis tasks such as the calculation of summary statistics and the creation of graphs; and the implementation of statistical analysis concepts such as T-tests, ANOVA and correlation.

Prerequisite: EPIB315.

Jointly offered with: EPIB695.

Credit Only Granted for: EPIB463 or EPIB695.

EPIB489 Special Topics in Epidemiology or Biostatistics (1-6 Credits)

Special topics in epidemiology or biostatistics.

Repeatable to: 6 credits if content differs.

EPIB610 Foundations of Epidemiology (3 Credits)

Introduction to the discipline of epidemiology and its applications to health issues and practices. Basic epidemiologic concepts and methods will be covered.

Prerequisite: EPIB300; or equivalent undergraduate statistics or biostatistics course with a grade of C- or higher; or a score of 70% or higher on EPIB300 placement exam.

Credit Only Granted for: EPIB610 or HLTH720.

Formerly: HLTH720.

EPIB611 Intermediate Epidemiology (3 Credits)

Analysis of epidemiologic methods as applied to epidemiologic research, analysis of bias, confounding, effect modification issues, overview of design, implementation, and analysis of epidemiologic studies.

Prerequisite: 1 course with a minimum grade of B- from (SPHL602, EPIB610); or a minimum score of 70% on the SPHL602 or EPIB610 waiver exam.

EPIB612 Epidemiologic Study Design (3 Credits)

Application of epidemiologic study designs, analytic methods used for analysis of cohort, case-control, cross-sectional, and clinical trials research.

Prerequisite: EPIB611.

EPIB620 Chronic Disease Epidemiology (3 Credits)

Overview of prevalence and risk factors for major chronic diseases. Discussion of methodological issues unique to specific chronic disease.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB621 Infectious Disease Epidemiology (3 Credits)

Overview of the unique aspects of infectious diseases and the epidemiological methods used in their study, prevention, and control.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB622 Social Determinants of Health (3 Credits)

Overview of the major social variables that affect public health, including socioeconomic status, poverty, income distribution, race, social networks/support, community cohesion, psychological stress, gender, and work and neighborhood environment.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB623 Epidemiologic Methods in Health Disparities Research (3 Credits)

An examination of the measurement, monitoring, analysis, and reporting of health disparities in the U.S. Through in-depth examples and class activities, students will learn about the state of health disparities, epidemiologic methods for health disparity assessments, and best practices for translating data on health disparities for policy makers.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB624 Genetic in Public Health (3 Credits)

Emerging role of genetics in public health; overview of basic tenets of human genetics; examination of how public health practices and research are influenced by genetics and ethical issues specific to genetics.

Prerequisite: EPIB610.

EPIB626 Epidemiology of Obesity (3 Credits)

Overview of the epidemiological, prevention, and treatment of obesity, its causes and consequences, and energy balance issues; application of epidemiologic methods to the study of obesity epidemiology.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB627 Epidemiologic Methods for Primary Research (3 Credits)

Students are provided with the knowledge and skills needed to design and implement epidemiological research studies and to collect primary data. Presents an overview of types of research designs, sampling methodologies, measurement issues, questionnaire design, and guidelines for recruiting and interacting with participants. This foundation of knowledge is applied to group assignments, which apply the steps involved in the primary data collection process. Goals include: (a) achieving competence in designing and implementing studies based on scientifically sound epidemiological research methods; and (b) gaining the ability to critically evaluate health research and epidemiological studies.

Prerequisite: EPIB610; or permission of instructor.

Credit Only Granted for: EPIB600 or EPIB627.

Formerly: EPIB660.

EPIB630 Epidemiologic Methods in Sexual and Reproductive Health Research (3 Credits)

Examination of epidemiologic methods (quantitative and qualitative) for collecting and analyzing data on sexual and reproductive health. The emphasis will be to introduce students to the appropriate methods used for challenging and sensitive research topics such as sexual behavior, HIV/STI, drug use, sexual abuse.

Prerequisite: Must have completed or be concurrently enrolled in SPHL602; or EPIB610.

EPIB631 Cancer Epidemiology (3 Credits)

This combines public health disciplines including epidemiological methods, molecular biology, pathology, clinical and social/behavioral sciences to explore modern cancer epidemiology, prevention and control in the United States and internationally. Emphasis will be placed on those cancers of high prevalence or unique biological characteristics that illustrate interesting epidemiological or etiological characteristics.

Prerequisite: EPIB610; or must have completed or be concurrently enrolled in SPHL602; or permission from instructor.

Additional Information: This course is being jointly offered with the University of Maryland Baltimore and will be taught at the College Park campus.

EPIB633 Health Survey Design and Analysis (3 Credits)

An overview of types of survey research designs, questionnaire design, measurement issues, and techniques for recruiting and interacting with participants. Students will discuss and implement a variety of health survey analysis techniques, including how to utilize SAS statistical software to estimate descriptive statistics and implement regression models, while accounting for complex survey designs.

Prerequisite: SPHL602 or EPIB610; or permission of Instructor.

Recommended: EPIB697.

EPIB634 Applied Data Analysis in Social Epidemiology and Behavioral Health (3 Credits)

Focuses on the application of factor analysis, mediation analysis using path analytic model, and structural equation model in social epidemiology and behavioral health. Application of these analytical methods using SAS.

Prerequisite: EPIB610 and EPIB650; or permission of instructor.

EPIB635 Applied Multilevel Modeling in Health Research (3 Credits)

Multilevel modeling is a popular analytic technique in health research that collects data from participants at hierarchic levels, e.g., residents nested in neighborhoods, and patients in hospitals. The course covers topics in multilevel modeling including two- and three-level multilevel linear modeling, logistic regression model, modeling with ordered and nominal outcomes, as well as strategies for model building. This course focuses on the application of multilevel modeling, rather than mathematics. The instructor uses a step-by-step approach to teach this course with real-world examples. The course begins with an overview of the feature of multilevel data then transitions to the analytic foundations of multilevel models. Later lectures cover the use of multilevel modeling to predict the occurrence of an outcome (prediction model) and estimate the exposure-outcome association by controlling potential confounding and assessing interactions (association model).

Prerequisite: Working knowledge of fundamental statistical concepts, regression modeling, and SAS programming.

EPIB636 Professional Skills and Resilience (3 Credits)

This blended course is aimed at preparing students as future epidemiologists, biostatisticians, health statisticians, or public health analysts/advisors to meet new challenges in public health and build academic resilience and successful careers. Academic resilience, or increased likelihood of (academic) success despite environmental adversities can be promoted by focusing on alterable factors such as coping mechanisms, peer and family support, social connectedness, positive role modeling and mentorship, and intellectual stimulation. Through readings, discussions and exercises, students will develop soft skills required to be successful in the workplace (e.g., how to prepare for the job search, develop professional demeanor, personal interactions). Online training will supplement in-person course content to help students build positive nurturing professional relationships and networks, maintain positivity, develop emotional insight, achieve life balance, and become more reflective. Field trips and guest lectures to introduce students to potential employers and different work environments will be identified with student input.

Restriction: Enrollment in a UMD SPH graduate degree program.

EPIB637 Social Epidemiologic Methods in Health Equity Research (3 Credits)

Provides students with the knowledge and skills to design and implement social epidemiology studies related to investigating health inequities. Presents an overview of drivers of health inequities (e.g., racism, socioeconomic status) and conceptual and methodological challenges in empirically investigating these social determinants of health including issues related to confounding, selection bias, measurement error, and evaluation of mechanisms. Covers methodological approaches that can be used to address these challenges including instrumental variable analyses, difference-in-differences, mediation analyses using inverse odds ratio weighting, and qualitative analyses. This knowledge will be applied to exploring research questions of your choice. The course will foster a co-learning environment and recognize the value and strength of interdisciplinary perspectives. Curiosity and critical thinking are encouraged and supported.

Prerequisite: SPHL602 or permission of instructor.

EPIB641 Public Health and Research Ethics (1 Credit)

Overview and discussion of ethical issues that face public health practitioners and researchers.

EPIB650 Biostatistics I (3 Credits)

Basic statistical concepts and procedures for Public Health. Focuses on applications, hands-on-experience, and interpretations of statistical findings.

Prerequisite: EPIB300; or equivalent undergraduate statistics or biostatistics course with a grade of C- or higher; or a score of 70% or higher on EPIB placement exam.

Credit Only Granted for: EPIB650, HLTH651, or HLTH688B.

Formerly: HLTH651 and HLTH688B.

EPIB651 Applied Regression Analysis (3 Credits)

An introduction to important statistical methods used in public health research, including nonparametric hypothesis testing, ANOVA, simple and multiple linear regression, logistic regression, and categorical data analysis.

Prerequisite: 1 course with a minimum grade of B- from (SPHL602, EPIB650); or a minimum score of 70% on the SPHL602 or EPIB650 waiver exam.

Recommended: EPIB697 or previous experience working with SAS is highly recommended.

EPIB652 Categorical Data Analysis (3 Credits)

Methods for analysis of categorical data as applied to public health research, including contingency tables, logistic regression, multicategory logic models, loglinear models, and models for matched-pairs.

Prerequisite: EPIB651.

Recommended: EPIB697 or previous experience working with SAS is highly recommended.

EPIB653 Applied Survival Data Analysis (3 Credits)

Overview of statistical methods for analyzing censored survival data, including the Kaplan-Meier estimator, the log-rank test, Cox PH model.

Prerequisite: EPIB651.

EPIB654 Clinical Trials: Design and Analysis (3 Credits)

This course provides an introduction to the clinical trials design and data analysis. Topics covered include: history/background and process for clinical trial, key concepts for good statistics practice (GSP)/good clinical practice (GCP), regulatory requirement for pharmaceutical/clinical development, basic considerations for clinical trials, designs for clinical trials, classification of clinical trials, power analysis for sample size calculation for different designs, statistical analysis for efficacy evaluation, statistical analysis for safety assessment, implementation of a clinical protocol, statistical analysis plan, data safety monitoring, adaptive design methods in clinical trials (general concepts, group sequential design, dose finding design, and phase I/II or phase II/III design) and controversial issues in clinical trials.

Prerequisite: EPIB650 or SPHL602, and EPIB651; or permission of instructor.

EPIB655 Longitudinal Data Analysis (3 Credits)

Statistical models for drawing scientific inferences from longitudinal data, longitudinal study design, repeated measures and random effects to account for experimental designs that involve correlated responses, handling of missing data.

Prerequisite: EPIB651.

EPIB656 Applied Bayesian Data Analysis (3 Credits)

The theory and practical application of Bayesian statistical methods in the field of public health and related areas. A variety of models will be discussed including linear regression, multilevel model, generalized linear model, generalized linear mixed model.

Prerequisite: EPIB652 or STAT700; or permission of instructor.

EPIB657 Spatial Statistics for Public Health Data (3 Credits)

Overview three main areas of spatial statistics: point patterns, geostatistical data, and lattice (areal) data. Application of spatial statistical models including CSR, k-function, kriging, semivariogram, CAR, SAR, GWR, spatial GLM, and multilevel model to public health and environmental data analysis.

Prerequisite: EPIB651 and EPIB652; or permission of instructor.

EPIB660 Analysis of National Health Survey Data (3 Credits)

Provides background on how features such as stratification, clustering, and unequal sample selection probabilities can invalidate the assumptions underlying traditional statistical techniques, those implicitly assuming a simple random sampling with replacement design. Application using the SURVEY family of SAS/STAT procedures (Version 9.4 or later).

Prerequisite: EPIB650; or permission from Instructor.

Recommended: EPIB697.

EPIB661 Applied Multivariate Data Analysis (3 Credits)

Multivariate analysis targets data with simultaneous measurements on many variables and studies the relationship between these variables.

This course introduces important multivariate analysis methods used in public health research. Topics include multivariate regression analysis, multivariate analysis of variance (MANOVA), principal component analysis (PCA), factor analysis, discriminant analysis (classification), clustering analysis, canonical correlation analysis (CCA) and correspondence analysis (CA).

Prerequisite: Must have completed EPIB651 or permission of instructor.

Recommended: Previous experience with at least one statistical software package (e.g. SAS, R, STATA). SAS is the main software package used for demonstration in class.

EPIB663 SAS Programming (3 Credits)

Learn how to analyze and summarize data using SAS. The course begins by introducing the students to basic SAS programming and data manipulation techniques. More advanced themes, such as preliminary data analysis and graphs, are explored later in the semester. Finally, the class covers the implementation of several advanced statistical concepts in SAS, including T-tests, ANOVA, non-parametric tests, regression and normality tests.

Credit Only Granted for: EPIB698E or EPIB663.

Formerly: EPIB698E.

EPIB664 Missing Data Analysis (3 Credits)

Missing data is a common problem in almost all scientific fields. Students will learn the different patterns and mechanisms of missing data, common procedures to handle missingness including weighting procedure, imputation-based procedure and model-based procedure. Useful and popular imputation methods and tools will be introduced. Numerous real data examples will be included to help students understand and solve the real world problem with missing data for different study designs.

Recommended: Previous experience with at least one statistical software (e.g. SAS, R, STATA).

EPIB670 Molecular Epidemiology of Infectious Diseases (2 Credits)

Molecular epidemiology is a discipline that uses molecular microbiology tools to study the distribution and determinants of diseases in human and animal populations. This course will provide a comprehensive overview and detailed discussion of the core molecular approaches and recent technological advances that are and can be used to investigate the etiology, transmission, and control of infectious diseases in veterinary medicine and public health. Theoretical and practical aspects of various molecular biology methods will be discussed in the context of epidemiological studies of infectious diseases including both bacterial and viral infections of veterinary and zoonotic significance. Lecture topics will cover the principles and application of various molecular techniques to problems of infectious diseases; population and evolutionary genetics of pathogenic microorganisms; data analysis and interpretation. Lecture materials will also be supported with practical data analysis, literature review discussions, which will be student-driven that will critique relevant manuscripts via group discussions in the classroom.

Prerequisite: Students planning to take this course are expected to have had some backgrounds in infectious diseases and molecular biology.

Cross-listed with: VMSC670.

EPIB672 Public Health Informatics (3 Credits)

A basic overview of Informatics and its application in a public health setting. The major goal is for students to understand the basic tools and building blocks needed to utilize this technology in order to improve their professional productivity

Cross-listed with: HLTH672.

Restriction: Instructor permission is required for students not enrolled in a degree seeking program in the School of Public Health.

Credit Only Granted for: HLTH670 or HLTH672 or EPIB672.

Formerly: HLTH670.

EPIB689 Advanced Topics in Epidemiology or Biostatistics (1-6 Credits)

Special topics in epidemiology or biostatistics.

Repeatable to: 6 credits if content differs.

EPIB695 Introduction to R for Health Data Analysis (3 Credits)

A hands-on introduction to the statistical package R for health data management and analysis. The first part of the course focuses on basic and essential data manipulation and visualization using R. The second part emphasizes the use of R in statistical analyses, including summarization, correlation, chi-squared test, t-tests, ANOVA, simple and multiple regression. Students will also learn fundamental R language programming to perform user-defined calculations. No previous knowledge of R or of statistical analysis are assumed.

Jointly offered with: EPIB463.

Credit Only Granted for: EPIB463 or EPIB695.

EPIB697 Public Health Data Management (3 Credits)

This course is designed to provide students with the expertise needed to effectively manage research data using SAS as the statistical programming language.

Prerequisite: Permission of instructor.

EPIB698 Special Topics in Epidemiology and Biostatistics (1-3 Credits)

Open to master or doctoral students who desire to pursue special topics in Epidemiology and Biostatistics.

EPIB710 Grantsmanship for Epidemiologic Research (3 Credits)

In-depth study of the knowledge and skills needed to design, conduct, and evaluate an epidemiologic research study. Development of a complete research project.

Prerequisite: EPIB650, EPIB610, EPIB612, EPIB651, and EPIB611.

EPIB740 Advanced Methods in Epidemiology (3 Credits)

In-depth investigation of epidemiologic methods for making causal inferences and solving complex methodological problems. Multivariate models emphasized.

Prerequisite: EPIB650, EPIB610, EPIB612, EPIB651, and EPIB611.

EPIB741 Association Models for Cohort and Cross-Sectional Studies (3 Credits)

The first part of a two-course advanced methods series specifically designed for doctoral students in epidemiology. This course focuses on implementing analytical strategies guided by epidemiologic principles for data analysis, with an emphasis on association modeling techniques tailored for cohort and cross-sectional studies. Key topics include model specification, effect estimation, confounding control, and the assessment of interaction and mediation effects. The course covers applied multivariate regression models, such as log-binomial regression, robust Poisson regression, the Cox proportional hazards models, and propensity-score models. Detailed procedures are provided for model specification, assessment of model assumptions, selection of alternative models, estimation of effects, and interpretation of findings from association models.

Prerequisite: EPIB612; or permission of instructor .

EPIB742 Association Models for Case-Control and Ecological Studies (3 Credits)

The second part of a two-course advanced methods series specifically designed for doctoral students in epidemiology. EPIB742 emphasizes the implementation of analytical strategies rooted in epidemiologic principles for data analysis. The course focuses on specific association modeling techniques for analyzing data from traditional, matched, and population-based case-control studies, case-crossover studies, and ecological studies. Key topics include model specification, effect estimation, control of confounding, and assessment of interaction effects. The curriculum covers applied multivariate regression models such as traditional logistic regression, conditional logistic regression, conditional Cox proportional hazards regression, and weighted Cox regression models. Additionally, the course introduces spline techniques for analyzing dose-response data. Detailed procedures for model specification, assessment of model assumptions, selection of alternative models, effect estimates, and interpretation of findings from association models are thoroughly explored.

Prerequisite: EPIB741.

EPIB778 Practical Experience in Public Health (1-3 Credits)

Practice experience providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the practice experience will depend upon the student's background and career goals.

Prerequisite: Permission of SPHL-Department of Epidemiology and Biostatistics.

Repeatable to: 3 credits.

Credit Only Granted for: EPIB785 or EPIB778.

EPIB786 Capstone Project in Public Health (3 Credits)

Capstone experience providing opportunity to apply knowledge and skills to a specific public health problem or issue. Completion of project relevant to public health under the direction of an advisor.

Prerequisite: Permission of SPHL-Epidemiology & Biostatistics department.

EPIB788 Critical Readings in Epidemiology and Biostatistics (1-3 Credits)

Open to master and doctoral students to discuss critical readings in Epidemiology and Biostatistics.

Prerequisite: Must have completed or be concurrently enrolled in EPIB610.

Repeatable to: 6 credits if content differs.

EPIB798 Independent Study (1-6 Credits)

Master or doctoral students who desire to pursue special research problems under the direction of a faculty member of the department may register for 1-6 hours of credit under this number.

Prerequisite: Permission of SPHL-Epidemiology & Biostatistics department.

Repeatable to: 9 credits if content differs.

EPIB799 Master's Thesis Research (1-6 Credits)**EPIB898 Pre-Candidacy Research (1-8 Credits)****EPIB899 Doctoral Dissertation Research (1-8 Credits)**

FILM - Film Studies

FMSC - Family Science

FMSC420 African American Families (3 Credits)

Examination of the history, structure, cultural foundation, and diversity of African American family life is the focus of this class. Presentations and discussions enable students to identify, analyze, and assess: (1) the major theoretical perspectives used in the study of African American families; (2) the impact of social policy on African American families; and (3) specific areas of family life (e.g., marriage and divorce, parenting, child development, health disparities).

Recommended: FMSC330.

Credit Only Granted for: FMSC420 or FMSC498F.

Formerly: FMSC498F.

FMSC430 Gender Issues in Families (3 Credits)

The development of historical, cultural, developmental, and psychosocial aspects of masculinity and femininity within the context of contemporary families and the implications for interpersonal relations.

Prerequisite: SOCY100, SOCY105, or PSYC100.

FMSC431 Family Crises, Emergencies and Interventions (3 Credits)

Examines the stressors in life that may lead families into a state of crisis or emergency and what can be done to help families when the need arises. Both internal stressors, such as substance abuse, finances, divorce, illness or parent-child conflict, and external stressors, such as community violence and natural disasters, are examined. Using theories and techniques for intervention and enhancement, the course examines factors involved in stressors turning into a family crisis and how factors such as emergency preparedness, social support and public policy can be a source of family resilience or protect families from negative outcomes.

Prerequisite: PSYC100.

FMSC432 Adult Development and Aging in Families (3 Credits)

Theory, research, history, and programming related to adult development and aging in the intergenerational context of family.

Prerequisite: PSYC100; and (SOCY100 or SOCY105). And FMSC332; or must have completed a comparable development course.

Restriction: Must be in a major within SPHL-Family Science department.

Credit Only Granted for: FMSC432 or FMST432.

Formerly: FMST432.

FMSC440 Death and Loss in Family Life (3 Credits)

Examination of how families experience grief and loss resulting from the death of a family member, including health and financial consequences. Overview of historical, social, psychological, cultural, medical, and legal dimensions of death in families from diverse backgrounds. Exploration of how the health care system and funeral home industry assist families in managing death and loss.

Recommended: Moderate level of computer literacy, especially Internet and ELMS. Reliable computer and Internet access.

Credit Only Granted for: FMSC440 or FMSC498B.

Formerly: FMSC498B.

FMSC445 Sexuality: Issues in Family Therapy and Service Delivery (3 Credits)

Typical, dysfunctional, and pathological sexual functioning, including effects on individuals, couples, and family systems. Sensitizes students to sexual issues, explores how perceptions of such issues affect work with people, and emphasizes implications for marriage and family therapy.

Prerequisite: A basic course in human sexuality; and permission of instructor. Jointly offered with FMSC645.

Credit Only Granted for: FMSC445 or FMSC645.

FMSC460 Violence in Families (3 Credits)

Theories of child, spouse, and elder abuse in the family setting. Emphasis on historical, psychological, sociological and legal trends relating to physical, emotional, and sexual abuse. Introduction to methods for prevention and remediation.

Prerequisite: SOCY100, SOCY105, or PSYC100.

Credit Only Granted for: FMSC460 or FMST460.

Formerly: FMST460.

FMSC477 Internship and Analysis in Family Science (3 Credits)

A supervised internship and a seminar requiring analysis. Opportunities to integrate theory and practice including 120 hours of contracted field experience. Summer or fall internship contracts due May 1; Spring contracts due December 1. See department for application procedures.

Prerequisite: FMSC383; and 9 credits in FMSC courses; and permission of SPHL-Family Science department.

Restriction: Must be in a major within SPHL-Family Science department.

Credit Only Granted for: FMSC477, FMST347, or FMST477.

Formerly: FMST477.

FMSC485 Introduction to Family Therapy (3 Credits)

The fundamental theoretical concepts and clinical procedures of marital and family therapy including premarital and divorce therapy issues.

Prerequisite: FMSC330; or 1 course from PSYC300-499 course range.

Credit Only Granted for: FMSC485 or FMST485.

Formerly: FMST485.

FMSC486 Law, Public Health and the Cuban Family (4 Credits)

A short-term summer study abroad course that is a comparative law and public health course. Students travel to Havana, Cuba to compare family problems in a capitalist versus socialist society within the context of legal, public health, social, cultural and economic changes.

Recommended: FMSC487.

Jointly offered with: FMSC686.

Credit Only Granted for: FMSC486, FMSC686 or MIEH698B.

Additional Information: This is a study abroad course which will primarily occur in Cuba. Additionally, the course involves an online component prior to and following the trip.

FMSC487 Family Law (3 Credits)

Designed for students interested in studying the law, public health, and family science, this course provides students with a general overview of family law and the impact on healthy families. The course also includes the study of cutting-edge issues such as marriage equality, assisted reproduction and ethical issues that may arise.

FMSC498 Special Topics: Family Science (1-3 Credits)

Special course topics in family studies.

Prerequisite: Permission of SPHL-Family Science department.

Repeatable to: 6 credits if content differs.

Formerly: FMST498.

FMSC600 Family Theories (3 Credits)

An overview of the theoretical frameworks underlying research on the family. Survey of research findings.

Credit Only Granted for: FMSC600 or FMST600.

Formerly: FMST600.

FMSC601 Doctoral Seminar in the Process of Inquiry (1 Credit)

This small, team-taught pro-seminar is designed as an introduction to the integration of family science and public health paradigms. The focus is the full, complex "process of inquiry", with emphasis on the conceptualization phase of the process, as it leads to related design, planning, empirical, and analytic phases. Instead of emphasizing content, the pro-seminar will help students develop a broad "way of thinking" about scientific inquiry, which will guide their coursework, assessments, and independent scholarly work during their doctoral training.

Restriction: Must be a first-year student in the Family Science doctoral program or Maternal and Child Health doctoral program; or permission of instructor .

FMSC606 Ethnic Families and Health Disparities (3 Credits)

Historical, psychosocial, economic, and political factors influencing the structure and functioning of ethnic families. Overview of racial and ethnic health disparities over the life course and ways in which they are influenced by multi-level contextual factors.

Credit Only Granted for: FMSC606 or FMST606.

Formerly: FMST606.

FMSC610 Research Methods in Family Science (3 Credits)

Research methods in family science. The role of theory, design, use of qualitative and quantitative measurement techniques, data collection and data analysis. Development of research proposals.

Prerequisite: EDMS645; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: FMSC610 or FMST610.

Formerly: FMST610.

FMSC630 Family Therapy with Children and Adolescents (3 Credits)

Covers the theory and practice of individual and family therapy with children and adolescents for the treatment of specific psychological disorders and family system challenges. The course covers assessment and unique considerations for treatment management when working with minors as well as specific therapy models and techniques to work with children and adolescents such as structural family therapy, cognitive-behavioral family therapy, attachment-based therapy, and play therapy techniques. The course also includes psycho-educational family interventions and evidence-based practices for assessment and treatment of children and adolescents. The course emphasizes consideration of therapists' and clients' social location as well as socio-culturally attuned, inclusive, and affirming conceptualization, assessment and treatment to serve diverse populations.

Prerequisite: FMSC640.

Restriction: Must be in the Couple and Family Therapy Master's Program.

Credit Only Granted for: FMSC698P or FMSC630.

Formerly: FMSC698P.

FMSC631 Trauma & Addiction in Family Life (3 Credits)

Introduces students to traumatic stress, trauma- and stressor-related disorders, and substance-related and addictive disorders. Students will learn about risk factors for traumatic stress along the lifespan and individual and family resiliency to these conditions. This course will provide students with the tools necessary for assessment and diagnosis of trauma- and stressor-related disorders and substance-related and addictive disorders. Students will become knowledgeable about the short-term and long-term consequences of traumatic stress and learn about research-supported best clinical practices for the treatment of trauma- and stressor-related disorders, and substance-related and addictive disorders. The students will also learn about recognizing and preventing burnout, compassion fatigue, and secondary traumatization.

Credit Only Granted for: FMSC631 or FMSC698A.

Formerly: FMSC698A.

FMSC632 Testing and Assessment in Couple and Family Therapy (3 Credits)

Graduate course in family, couple, and individual testing and assessment. The course will cover typical procedures and instruments for assessing qualities of individual functioning and relationship functioning, in work with families and couples. Study of the assessment process will include test construction and use of standardized tests, assessments, and rating scales. The use of assessment in treatment plans and treatment outcome evaluation, ethical considerations, and the dissemination of information to clients and others are covered. Also, this course will include classic testing and assessment methods, to ensure familiarity with these measures among CFTs.

Restriction: Permission of the Family Science department.

Credit Only Granted for: FMSC698T or FMSC632.

Formerly: FMSC698T.

FMSC635 Integrative LGBTQIA+ Clinical Knowledge and Techniques for Family, Couple and Varie (3 Credits)

Explores the physiological, psychological, and socio-cultural variables associated with sexual expression, identity, orientation, and behavior for the LGBTQ+ population in relation to mental health and clinical contexts. Attention will focus on the clinical context of sex and gender most often presented in therapy with LGBTQ+ individuals, couples, families, and other varied relationship dynamics within the LGBTQ+ Community. The course explores clinician's comfort and level of knowledge, practice, and foundational understanding of sexuality and gender, own self-care systems, and how to navigate challenges and establish support. The course discusses the developmental and biological components of sexuality and gender, clinical diagnosis, and relational theoretical perspectives, desire, and pleasure modalities, relationships around family building, as well caring for the elderly.

Prerequisite: FMSC745, FMSC640, and FMSC641 .

FMSC640 Family Therapy: Theory and Techniques (3 Credits)

Overview of fundamental theoretical concepts and clinical procedures in marital and family therapy, with an emphasis on those therapies which operate from a family systems perspective.

Credit Only Granted for: FMSC640 or FMST640.

Formerly: FMST640.

FMSC641 Couples Therapy, Theory, and Techniques (3 Credits)

Overview of theoretical models of couple relationships and methods of facilitating growth and interaction within those relationships. Emphasis on couples with conflicting needs and expectations, and dysfunctional communication and conflict negotiation skills.

Prerequisite: FMSC640.

Credit Only Granted for: FMSC641 or FMSC641.

Formerly: FMST641.

FMSC642 Normal and Abnormal Individual and Family Development (3 Credits)

Normal development and psychopathology in the family system. Emphasis on parent-child relationships and application of the current Diagnostic and Statistical Manual of Mental Disorders (DSM) to family therapy.

Prerequisite: FMSC640.

Credit Only Granted for: FMSC642 or FMST642.

Formerly: FMST642.

FMSC645 Sexuality: Issues in Family Therapy and Service Delivery (3 Credits)

Typical, dysfunctional, and pathological sexual functioning: effects on individuals, couples, and family systems. Sensitizes students to sexual issues, explores how perceptions or such issues affect work with people, and emphasizes implications for marriage and family therapy.

Prerequisite: Must have completed a basic course in human sexuality.

Restriction: Permission of instructor. Jointly offered with FMSC445.

Credit Only Granted for: FMSC445 or FMSC645.

FMSC646 Sex Therapy: Theory, Skills, and Practice (3 Credits)

Introduction to the theory and practice of sex therapy, including information about human sexual function and dysfunction and appropriate intervention methods. Emphasis on the relationship and the dynamics of sexual functioning within that system.

Prerequisite: FMSC645; or permission of SPHL-Family Science department.

FMSC647 Theory and Techniques of Family Mediation (3 Credits)

An introduction to family mediation as an approach to helping families deal effectively with the issues associated with separation and divorce. Theory, practice, and techniques of negotiation, with an emphasis on custody, property division, and the constructive restructuring of family relationships.

Credit Only Granted for: FMSC647 or FMST647.

Formerly: FMST647.

FMSC650 Ethical, Legal, and Professional Principles in Couple and Family Therapy (3 Credits)

This course offers an introduction to the basic principles and practices in couple and family therapy. It covers major theoretical approaches to couple and family therapy, linking core concepts to practical aspects of assessment and treatment. Readings, didactic presentations by the instructor, and class discussions are designed to build students' knowledge of both generic therapy skills and specific techniques within each theoretical model. Emphasis is given to professional ethics, standards, and clinical skills/techniques necessary for the beginning family practitioner. Students become familiar with professional ethical codes as well as ethical decision-making models and how to apply them in clinical practice. In-class roleplays are used for practicing specific assessment and treatment methods, as well as for gaining experience in responding appropriately to a variety of common professional and ethical issues that arise in clinical practice.

Prerequisite: Permission of SPHL-Family Science department.

Restriction: Must be in Couple and Family Therapy (Master's) program.

FMSC651 Treatment of Emotional and Mental Disorders in the Family Context (3 Credits)

This course is designed to assist beginning therapists in developing their knowledge of the major theoretical approaches to family therapy and applying those approaches to their clinical work. In addition, the course addresses many procedural, professional, and ethical issues often faced by beginning therapists. Towards these ends, the primary foci of the course will be on developing competencies in (a) observing family process, (b) assessing and conceptualizing family strengths and problems from different theoretical models, and (c) developing treatment plans from these different theoretical models. Finally, attention will also be given to therapist self-care.

Prerequisite: FMSC650.

Restriction: Must be in Couple and Family Therapy (Master's) program.

FMSC652 Psychopathology and Diagnosis in Family Systems (3 Credits)

The purpose of this course is to assist intermediate family therapists in further developing their knowledge, clinical, and professional expertise by deepening their understanding of major child and adult psychopathology. Further, students will learn to apply this knowledge to their clinical work, particularly in addressing individual family members' psychopathology within the context of family relationships. Major foci of the course include assessment and diagnostic interviewing in family therapy, and intervention with forms of psychopathology such as depression, anxiety disorders, substance abuse, and major mental disorders with clients who present for couple and family therapy.

Prerequisite: FMSC651.

Restriction: Must be in Couple and Family Therapy (Master's) program.

FMSC653 Advanced Application of CFT Models and Techniques (3 Credits)

This course is an integration of advanced assessment, diagnosis, and treatment procedures with couples, families, individuals, and groups. Emphasis will be on the following areas: (1) the advanced study of classic and emerging CFT models; (2) special topic areas (e.g., trauma, religious differences, grief & loss, family rituals,) and/or collaborative CFT in varied settings (e.g., schools, medical facilities, in-home/family preservation work, foster care, alcohol & drug centers); (3) development of a personal theory/philosophy of family therapy along with a case management system for that model. Additionally, development of the self of therapist, contributions to CFT as a profession, and employment as well as independent practice information including resume development, licensing laws and regulations in Maryland and other states will be explored. Also, procedures for preparing for the National MFT licensing exam will be discussed. Advanced professional practice will be demonstrated in case presentations related to the specific areas emphasized in the course.

Prerequisite: FMSC652.

Restriction: Must be in Couple and Family Therapy (Master's) program.

FMSC654 Clinical Marriage and Family Therapy Practice (3 Credits)

Focuses on the integration of ethics, professional identity, and administrative aspects of clinic operations in a practice setting. This course covers all the administrative duties and responsibilities that students have as interns of the Center for Healthy Families from enrollment to graduation from the Couple and Family Therapy program.

Prerequisite: FMSC651.

Restriction: Must be in Couple and Family Therapy (Master's) program.

FMSC658 Supervised Clinical Practice in Couple and Family Therapy (1-3 Credits)

This course is designed to provide supervision of family, couple, and individual therapy client contact. This course is limited to, and required of, all students admitted to the Couples and Family Therapy (CFT) Program. Supervision utilizes various family systems models and differing methods are employed.

Prerequisite: FMSC650.

Restriction: Permission of instructor.

Repeatable to: 12 credits if content differs.

FMSC660 Program Planning and Evaluation in Family Science (3 Credits)

Theory and methods of program planning and evaluation with special emphasis on family programs. Assessment of program goals and the social and psychological factors involved in program implementation. Methods for measuring the effectiveness of program delivery, as well as the impact of services on family functioning.

Credit Only Granted for: FMSC660 or FMST660.

Formerly: FMST660.

FMSC668 Special Topics in Family Sciences (1-3 Credits)**FMSC686 Law, Public Health and the Cuban Family (4 Credits)**

A comparison of family problems in the United States, a capitalist society, with Cuba, a socialist one, as evaluated within the context of legal, public health, social, cultural, and economic changes. The highlight of the course is time spent in Havana, Cuba where students may gain first-hand knowledge of these issues through visits to a hospital, fertility clinic, rural doctor's office, medical school, law offices, museums, and a slave rebellion site and while meeting with the U.S. Ambassador in Cuba, Cuban judges, lawyers, doctors, professors, and health care professionals and the Cuban people as their host families and beyond.

Jointly offered with: FMSC486.

Credit Only Granted for: FMSC486, FMSC686 or MIEH698B.

Additional Information: This is a summer short-term faculty-lead study abroad course which will primarily occur in Cuba. Additionally, the course involves an online component prior to and following the trip.

FMSC689 Research Internship (1-3 Credits)

Research experience resulting in a scholarly article suitable for publication in a peer-reviewed journal.

Prerequisite: Permission of instructor; and permission of SPHL-Family Science department.

Repeatable to: 3 credits if content differs.

Formerly: FMST689.

FMSC698 Advanced Topics in Family Science (1-3 Credits)

Arranged group study on specific topic which may vary from term to term.

Repeatable to: 12 credits.

Formerly: FMST698.

FMSC699 Independent Study (1-6 Credits)

Prerequisite: Permission of SPHL-Family Science department.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

Formerly: FMST699.

FMSC710 Maternal and Child Health from a Life Course Perspective (3 Credits)

Survey of current science in maternal and child health informed by a life course perspective. The surveyed topics include in utero exposure to toxins, feeding and growth, and effects of chronic stress, maternal and child health.

Credit Only Granted for: FMSC710 or FMST710.

Formerly: FMST710.

FMSC720 Study Design in Maternal Child Health Epidemiology (3 Credits)

A detailed survey of key epidemiologic study designs provided through readings, lectures, and exercises. Lectures begin by considering the evolution of epidemiologic thought and parallel developments in design of epidemiologic studies. Topics covered include assessment of causality in observational studies, investigation of acute outbreaks, survey design, cohort and case-control study designs, clinical randomized trials, and discussion of issues pertaining to measurement error in the assessment of exposures and outcomes in epidemiologic studies.

Prerequisite: EPIB610.

Restriction: Permission of the Family Sciences department.

Credit Only Granted for: EPIB612 or FMSC720.

FMSC730 Key Topics in Maternal and Child Health (3 Credits)

Review of key issues on the frontier of maternal and child health research and practice within broad public health and socio-cultural context.

Examines current maternal and child health issues such as ethics, child and family health, health and socioeconomic disparities, child nutrition and obesity, military family health, and global health.

Restriction: Permission of instructor.

FMSC740 Reproductive and Perinatal Epidemiology (3 Credits)

Focuses on current research, controversial issues, and methodological challenges in the epidemiology of reproductive and perinatal health. Reproductive health topics will include fertility and fecundity, quality family planning services, hormone replacement therapy, and reproductive health cancers. Perinatal health topics will include fetal growth, adverse pregnancy and birth outcomes, fetal/infant/maternal morbidity and mortality, and birth defects. Lectures will focus on the biology, measurement, and application of study designs and analytic strategies for examining these topics. Course readings and discussions will critically review the broader context of reproductive and perinatal health within families and communities.

Prerequisite: Must have completed a graduate course in epidemiology with a B- or higher.

Credit Only Granted for: FMSC612 or FMSC740.

Formerly: FMSC612.

FMSC745 Diversity and Social Justice In Couple and Family Therapy (3 Credits)

The purpose of this course is to improve students' cultural competence by sensitizing them to sources of bias in family service delivery, particularly those associated with race, culture/ ethnicity, social class, gender, sexual orientation, immigration, spirituality, and ability. Students will be introduced to major critiques of service delivery, couple and family therapy, and research from each of these perspectives, as well as recommendations for addressing these issues in practice.

Credit Only Granted for: FMSC745 or FMST745.

Formerly: FMST745.

FMSC750 Family and Health Policy (3 Credits)

Development and analysis of public policies affecting the health and well-being of children, youth, and families, with an emphasis on low income and ethnic minority populations. Examination of social, economic, and political dynamics that influence family and health policies and the delivery of health care. Introduction to health advocacy within the US public health system.

Credit Only Granted for: FMSC750 or FMST750.

Formerly: FMST750.

FMSC758 Supervision of Marriage and Family Therapy Supervision (1-3 Credits)

Designed to provide supervision of marriage and family therapy supervision. Limited to students who have completed a Marriage and Family Therapy (MFT) Program or its equivalent, have completed an approved MFT supervision course, and are supervisors-in-training. Supervised supervision will incorporate various family systems, models and methods.

Prerequisite: Permission of SPHL-Family Science department.

Repeatable to: 12 credits if content differs.

Formerly: FMST758.

FMSC760 Legal Issues & Families (3 Credits)

Analysis of marriage and family issues from a legal perspective. Review of legal decisions affecting families, including procreative rights, marriage, termination of marriage, parental and child rights, adoption, child custody, and child/family medical treatment. Relationship between family law and family policy.

Credit Only Granted for: FMSC760 or FMST760.

Formerly: FMST760.

FMSC780 Qualitative Methods in Family and Health Research (3 Credits)

Theoretical perspectives and methodological tools to conduct research with individuals and families across the life span. Review of research designs, participant fieldwork, observation and interview projects, data collection, computer-assisted data analysis, and development of grounded theory.

Restriction: Permission of the Family Sciences department.

Credit Only Granted for: FMSC780 or FMST780.

Formerly: FMST780.

FMSC789 Non-Thesis Research (1-3 Credits)

Non-thesis option research papers.

Repeatable to: 6 credits if content differs.

Formerly: FMST789.

FMSC790 Marriage and Family Therapy Supervision (3 Credits)

Theory and research in supervision of marriage and family therapy. Emphasis on major models, articulation of personal model, and demonstration of perceptual, conceptual, and executive skills in marriage and family therapy supervision. Designed to meet the didactic course component of the designation of Approved Supervisor of the American Association for Marriage and Family Therapy.

Prerequisite: Permission of SPHL-Family Science department.

Credit Only Granted for: FMSC790, FMST690, or FMST790.

Formerly: FMST790.

FMSC799 Master's Thesis Research (1-6 Credits)

Formerly: FMST799.

FMSC810 Theory in Family Systems and Family Health (3 Credits)

Theory and research on family interaction and family coping with normative health and mental health transitions and non-normative crises across the family life cycle. Micro-analysis of family process in communication, decision-making, problem-solving, and compliance to health regimens. Examination of dysfunctional patterns and effective coping strategies.

Restriction: Permission of instructor.

Credit Only Granted for: FMSC810, FMST698P, or FMST810.

Formerly: FMST810.

FMSC820 Advanced Quantitative Methods in Family and Health Research (3 Credits)

This seminar is designed to help students understand, evaluate, and develop research conceptualization and design relevant to family science and family health. By the end of the course, students will be able to critique and develop theoretically grounded quantitative research in their respective area of study. Throughout the course, students will be exposed to a broad range of advanced methods that are core to the field of family science. The course will train students on how to conceptualize and develop rigorous empirical research studies relevant to family science and family health.

Recommended: Basic knowledge regarding social science research methods, study design, univariate and bivariate statistics, and family theory.

FMSC850 Maternal & Child Health Epidemiology (3 Credits)

Determinants and trends in Maternal and Child Health, including analysis of the role of economic inequalities, race and ethnicity, community contexts, and psychosocial factors across the life course. Overview of methods and data systems used to monitor Maternal and Child Health. Development of a complete population health study.

Restriction: Permission of instructor.

Credit Only Granted for: FMSC850, FMST698P, or FMST850.

Formerly: FMST850.

FMSC879 Preparing Future Faculty and Professionals Seminar (1 Credit)

Development of skills necessary to obtain and succeed in academic and non-academic positions in family science and public health. Topics include: career mapping, networking, teaching/teaching portfolios, independent research, publishing, grant writing, program and policy evaluation, consulting, job search, interviewing and negotiation, mentoring, diversity, work-family balance, and ethical issues in the workplace. Periodic visits to universities and government/nonprofit employers.

Restriction: Must be in one of the following programs (Family Science (Doctoral); Maternal and Child Health (Doctoral)).

Repeatable to: 4 credits.

FMSC898 Pre-Candidacy Research (1-8 Credits)

Formerly: FMST898.

FMSC899 Doctoral Dissertation Research (1-8 Credits)

Formerly: FMST899.

FOLA - Foreign Language

FREN - French

FREN407 History of the French Language (3 Credits)

Evolution of the French language from Latin to modern French. Taught in French.

Prerequisite: FREN351 or FREN352; or permission of ARHU-French & Italian Languages & Literatures department.

FREN414 French for International Relations (3 Credits)

Historically, French has played a key role in the development and organization of International Relations. It remains an important tool for diplomats and an official working language of major international organizations. Students will be introduced to the French vocabulary and terminology specific to diplomatic discourse and the field of International Relations. Through French-speaking media analysis and simulated work-related situations in an international context, students will learn how to pitch a project, present a country situation, give a thematic presentation, and engage in successful negotiations. Students will also acquire the skills and proficiency to understand and produce professional documents used in the International Relations field. Taught in French.

Prerequisite: FREN387.

FREN421 Francophone African Film (3 Credits)

Imaginary and Memory in the reality of Francophone African Film from 1960-present. Taught in English.

Cross-listed with: CINE421.

Credit Only Granted for: FREN421, CINE421 or FILM421.

Formerly: FILM421.

FREN423 Women and French Cinema (3 Credits)

Cultural identity, social boundaries and gender roles in French film as well as introduction to film textual analysis and diverse film theories (semiotics, film and psychoanalysis, feminist film theory, structuralism, narratology, spectatorship and cultural studies). Taught in English.

Cross-listed with: CINE423.

Credit Only Granted for: FREN423, CINE423 or FILM423.

Formerly: FILM423.

FREN429 Studies in French Literature and Culture of the Renaissance (3 Credits)

Selected topics in French literature of the Renaissance.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN439 Studies in 17th Century French Literature and Culture (3 Credits)

Selected topics in seventeenth-century French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN449 Studies in 18th Century French Literature and Culture (3 Credits)

Selected topics in eighteenth-century French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN459 Studies in 19th Century French Literature and Culture (3 Credits)

Selected topics in nineteenth-century French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN469 Studies in 20th Century French Literature and Culture (3 Credits)

Selected topics in twentieth-century French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN472 The Construction of French Identity II: From the Revolution to the Early Twentieth Century (3 Credits)

French life, customs, culture, traditions (1750 to the early twentieth century).

Prerequisite: FREN387; or permission of ARHU-French & Italian Languages & Literatures department.

FREN474 Contemporary France: A Sociocritical Approach (3 Credits)

A sociocritical approach to understanding modern French society through the study of print and non-print media documents (autobiography, film, and paraliterature), with reference to the Francophone world. Taught in French.

Prerequisite: FREN387; or permission of ARHU-French & Italian Languages & Literatures department.

Recommended: FREN473.

FREN478 Themes and Movements of French Literature in Translation (3 Credits)

Studies treatments of thematic problems or literary or historical movements in French literature. Topic to be determined each semester. Taught in English.

FREN479 Masterworks of French Literature in Translation (3 Credits)

Treats the works of one or more major French writers. Topic to be determined each semester. Taught in English.

FREN480 French Cinema: A Cultural Approach (in Translation) (3 Credits)

A study of French culture, civilization, and literature through the medium of film. Taught in English.

Cross-listed with: CINE420.

Credit Only Granted for: FREN480, CINE420 or FILM420.

Formerly: FILM420.

FREN482 Gender and Ethnicity in Modern French Literature (3 Credits)

Literature by women writers of France and other French speaking areas with a focus on the relationship between gender, ethnicity and writing. Taught in English.

FREN488 Special Topics in Francophone Studies (3 Credits)

Topic and language of instruction to be announced when offered.

Repeatable to: 9 credits if content differs.

FREN489 Seminar in Themes or Movements of French Literature (3 Credits)

Seminar on selected themes or movements of French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN495 Honors Thesis Research (3 Credits)

The writing of a paper under the direction of a professor in this department and an oral examination. Required to fulfill the departmental honors requirement.

Restriction: Must be admitted to the departmental honors program.

FREN498 Special Topics in French Literature (3 Credits)

Selected topics in French literature.

Prerequisite: FREN387; and (FREN351 or FREN352). Or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN499 Special Topics in French Studies (3 Credits)

An aspect of French studies, the specific topic to be announced each time the course is offered.

Prerequisite: FREN387; or permission of ARHU-French & Italian Languages & Literatures department.

Repeatable to: 6 credits if content differs.

FREN600 Literary History, Theories, and Methodologies for French and Francophone studies (3 Credits)

Review of major movements in French and Francophone literature and introduction to theories and methods used in the field. Readings, discussions, and coursework in both French and English

FREN601 The History of the French Language (3 Credits)**FREN609 Special Topic in the French Language (3 Credits)****FREN611 The Structure of the French Language (3 Credits)**

Phonology, morphology, syntax and semantics of modern French. Collection and critical analysis of language data.

FREN619 Special Topic in Medieval French Literature (3 Credits)**FREN629 Special Topic in Sixteenth Century French Literature (3 Credits)****FREN639 Special Topic in Seventeenth Century French Literature (3 Credits)****FREN649 Special Topic in Eighteenth Century French Literature (3 Credits)****FREN659 Special Topic in Nineteenth Century French Literature (3 Credits)****FREN665 Contemporary French Theater (3 Credits)**

Examines selected plays from French contemporary theater (20th-21st c.) with a particular focus on new trends in writing, performing, and staging as they reflect the crisis faced by playwrights in particular, and French society in general at the aesthetic, social, and political levels. Students will explore different approaches to the analysis of theater plays and familiarize themselves with the evolution of mise-en-scene throughout the 20th century until the present day.

FREN669 Special Topics in Twentieth Century French Literature (3 Credits)**FREN679 The History of Ideas of France (3 Credits)**

Analysis of currents of ideas as reflected in different periods and authors of French literature.

FREN689 Seminar in a Great Literary Figure (3 Credits)**FREN699 Seminar (3 Credits)**

Topic to be determined each semester.

FREN709 College Teaching of French (1 Credit)

Introduction to the teaching of French at the college level with particular emphasis on methodology. Seminars in theory, demonstration of different teaching techniques, supervised practice teaching, training in language laboratory procedures, evaluation of instructional materials. Required of all graduate assistants in French.

Repeatable to: 2 credits.

FREN798 Master's Independent Study (1-3 Credits)

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 3 credits.

FREN799 Master's Thesis Research (1-6 Credits)**FREN818 French Literary Criticism (3 Credits)**

Analysis and evaluation of various trends in literary criticism. Topic to be determined each semester.

FREN889 Doctoral Independent Study (3 Credits)

Repeatable to: 6 credits.

FREN898 Pre-Candidacy Research (1-8 Credits)

Repeatable to: 6 credits.

FREN899 Doctoral Dissertation Research (1-8 Credits)

GEOG - Geographical Sciences

GEOG413 Migration: Latin America and the United States (3 Credits)

Develops an understanding of the push and pull factors that have contributed to human mobility (migration) that has transformed the Americas. The class is divided in two parts: immigration and emigration from Latin American and Latin America migration to the United States. We will be interested in studying the migration shifts that have occurred in Latin America and the theories that help explain them. The themes that will be addressed are the history of migration with Latin America and to North America, the impact of this migration on both sending and receiving countries, and the various policy strategies and issues concerning migration.

Prerequisite: GEOG313; or permission of BSOS-Geography department.

Recommended: HIST250; or USLT201; or LASC234.

Credit Only Granted for: GEOG413, or GEOG498M.

Formerly: GEOG498M.

GEOG415 Land Use, Climate Change, and Sustainability (3 Credits)

The issues of climate change and land use change as two interlinked global and regional environmental issues and their implications for society and resource use are explored.

Prerequisite: GEOG306; or permission of BSOS-Geography department.

Recommended: GEOG340; or GEOG342; or GEOG331. Or GEOG201; and GEOG211.

Credit Only Granted for: GEOG415 or GEOG498D.

Formerly: GEOG498D.

GEOG416 Conceptualizing and Modeling Human-Environmental Interactions (3 Credits)

Develops skills to carry out research that integrates environmental and economic aspects of sustainability by introducing extensively used quantitative tools for analyzing human-environmental interactions in the field of ecological economics. These include, e.g., index number calculations and decomposition analysis, Environmental Kuznets Curve (EKC), environmental input-output analysis and life-cycle analysis, and multi-criteria decisions aid (MCDA). Students will need laptops to run models during class.

Prerequisite: Permission of BSOS-Geography department.

Corequisite: MATH130, MATH140, or MATH120; or MATH220.

GEOG417 Land Cover Characterization Using Multi-Spectral Remotely Sensed Data Sets (3 Credits)

Students will be introduced to the image processing steps required for characterizing land cover extent and change. Key components of land cover characterization, including image interpretation, algorithm implementation, feature space selection, thematic output definition, and scripting will be discussed and implemented.

Prerequisite: GEOG272 and GEOG306; or permission of BSOS-Geography department.

Jointly offered with: GEOG617.

Credit Only Granted for: GEOG417 or GEOG617.

GEOG418 Field and Laboratory Techniques in Environmental Science (1-3 Credits)

Lecture and laboratory learning each week. A variable credit course that introduces field and laboratory analyses in environmental science. Individual learning contract are developed with instructor.

Restriction: Permission of BSOS-Geography department.

Credit Only Granted for: GEOG418 or GEOG448.

Formerly: GEOG448.

GEOG421 Changing Geographies of China (3 Credits)

Covers physical geography, history, and economic and political systems of the world's most populous country. The major focus will be on geographical issues in China's contemporary development: agriculture, population, urbanization, resource and energy, and environment.

Prerequisite: Permission of BSOS-Geography department. Or GEOG202; and GEOG201; and (GEOG435, GEOG333, or GEOG332).

Recommended: GEOG130; or GEOG140.

Credit Only Granted for: GEOG328B or GEOG421.

Formerly: GEOG328B.

GEOG422 Changing Geographies of Sub-Saharan Africa (3 Credits)

Students will develop an understanding of the geographic contexts of Sub-Saharan Africa, including an overview of the physical, bioclimatic, historical, cultural, political, demographic, health and economic geographies of Sub-Saharan Africa. Students will fill in the map of Africa by studying the spatial distribution within each of these geographic domains. In addition to an overview of geography South of the Sahara, the Congo will be taken as a more intensive case study through additional readings, lectures and discussions.

Prerequisite: Permission of BSOS-Geography department. Or GEOG201; and GEOG202; and (GEOG335 or GEOG333).

Recommended: GEOG130 or GEOG110.

Credit Only Granted for: GEOG328C, GEOG422.

Formerly: GEOG328C.

GEOG423 Latin America (3 Credits)

A geography of Latin America and the Caribbean in the contemporary world: political and cultural regions, population and natural resource distribution, economic and social development, poverty, crime, urbanization, migration trends, and natural disasters.

Prerequisite: Permission of BSOS-Geography department. Or GEOG201 and GEOG202; and (GEOG332, GEOG435, or GEOG333).

Recommended: GEOG130 and GEOG110.

Credit Only Granted for: GEOG313 or GEOG423.

Formerly: GEOG313.

GEOG431 Culture and Natural Resource Management (3 Credits)

Basic issues concerning the natural history of humans from the perspective of the geographer. Basic components of selected behavioral and natural systems, their evolution and adaptation, and survival strategies.

Credit Only Granted for: GEOG421 or GEOG431.

Formerly: GEOG421.

GEOG432 Spatial Econometrics (3 Credits)

An introduction to modern econometric techniques in general and spatial econometrics in particular, using the popular open source statistical computer language R. A focus on using statistical computing to produce analytical reports for real-world applications, research papers, and dissertations.

Prerequisite: Permission of BSOS-Geography department.

Jointly offered with: GEOG732.

Credit Only Granted for: GEOG432 or GEOG732.

GEOG438 Seminar in Human Geography (3 Credits)

Selected topics in human geography.

Recommended: GEOG201; or GEOG211.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG440 Polar Remote Sensing (3 Credits)

The harsh environment of the vast polar regions makes them some of the most inaccessible places on Earth. With widespread environmental change already underway, satellite remote sensing provides the only means by which to obtain year-round observations of the polar climate system. The objective of this course is to provide students with an overview of polar remote sensing techniques, including the physical principles of active and passive sensors, orbits, electromagnetic radiation, atmospheric transmission, calibration and validation. We will focus on measurements of the polar oceans, sea ice, glaciers, ice sheets, snow and permafrost, and examine the response of the cryosphere to climate change.

Prerequisite: PHYS171 or PHYS161; and AOSC401 or GEOG301; or with permission of instructor.

Cross-listed with: AOSC440.

Jointly offered with: AOSC642.

Credit Only Granted for: AOSC440, GEOG440, AOSC642, or GEOG640.

GEOG441 The Coastal Ocean (3 Credits)

Introduction to coastal oceanography, focusing on the physical, biological, and geological aspects of ocean areas on the inner continental shelves. Wave, currents, and tidal dynamics of bays, open coast, estuaries, and deltas. Sedimentary environments of major coastal types. Ecology and biogeochemical relationships, including benthic and planktonic characteristics. Coastal evolution with sea level rise. Human impacts: eutrophication, modification of sedimentation. The coastal future: rising sea level, hypoxia, and increased storminess.

Prerequisite: GEOG140; or students who have taken courses with comparable content may contact the department; or permission of BSOS-Geography department.

Credit Only Granted for: GEOG441 or GEOG498C.

Formerly: GEOG498C.

GEOG442 Biogeography and Environmental Change (3 Credits)

Biogeographical topics of global significance, including a consideration of measurement techniques, and both descriptive and mechanistic modeling. Topics may include: scale in biogeography, biodiversity, carbon geography, climate and vegetation, interannual variability in the biosphere, land cover, global biospheric responses to climate change, NASA's Mission to Planet Earth and Earth Observation System. The class focuses on both natural and anthropogenic controls, impacts of biogeography on climate and ecosystem services and different methods in biogeography.

Prerequisite: GEOG301. And GEOG201 and GEOG211; or permission of BSOS-Geography department. Jointly offered with GEOG642.

Credit Only Granted for: GEOG642, GEOG442, GEOG447, or GEOG484.

Formerly: GEOG447.

GEOG458 Special Topics in Study Abroad IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

GEOG461 Machine Learning for Computational Earth Observation Science (CEOS) (3 Credits)

Provides an introduction to machine learning methods and models with an emphasis on Earth observation. Topics will include supervised (decision trees, random forest, neural networks, support vector machine, Gaussian process and ensemble techniques), and unsupervised techniques (clustering/segmentation, dimension reduction, multi-dimensional data visualization). The course will highlight the state-of-the-art deep learning models; object-based versus pixel-based image classification; how to deal with missing data and non-uniform coverage of data; and large scale land cover land use mapping from heterogeneous satellite data. Practical part will include satellite image classification by applying classification models and biophysical parameters retrieval by applying regression models.

Prerequisite: GEOG371.

GEOG470 Algorithms for Geospatial Computing (3 Credits)

An introduction to fundamental geospatial objects and geometric algorithms for spatio-temporal data processing and analysis. Point data representation and analysis: spatial data models and data structures, algorithms for spatial queries, point clustering algorithms. Surface and scalar field modeling, such as terrains: raster and triangle-based models (TINs), algorithms for building and querying TINs. Algorithms for natural and urban terrain analysis: morphology computation and visibility analysis. Applications to processing and analysis of LiDAR (Light Detection And Ranging) data in the context of terrain reconstruction, urban modeling, forest management and bathymetry reconstruction for coastal data management. Road network computation and analysis: algorithms for route computation in road networks, and for road network reconstruction from GPS and satellite data.

Prerequisite: GEOG276; or a minimum grade of C- in CMSC330 and CMSC351; or permission of instructor.

Cross-listed with: CMSC401.

Jointly offered with: GEOG770.

Credit Only Granted for: CMSC498Q, CMSC401, CMSC788I, GEOG470, GEOG498I, GEOG770, or GEOG788I.

Formerly: GEOG498I.

GEOG471 Technologies for Computational Earth Observations (3 Credits)

An introduction and exploration of cutting-edge novel remote sensing datasets and their associated science uses and applications. We present several modules focused on different technologies (multispectral, lidar, radar, thermal), and for each have both hands-on lab assignments, lectures, and applications case studies. Data fusion techniques, and common analysis and processing pitfalls are presented and discussed. Hands-on computer labs allow students to explore each dataset via online tutorials. After all datasets are presented, students download their own datasets in an area of interest to them, and work toward a unique student-driven project for presentation to the class. The sky is literally the limit in this interactive course which provides a research experience opportunity for students in a supportive atmosphere.

Prerequisite: GEOG371 or permission of instructor.

GEOG472 Remote Sensing: Digital Processing and Analysis (3 Credits)

Digital image processing and analysis applied to satellite and aircraft land remote sensing data. Consideration is given to image preprocessing techniques including radiometric calibration, geometric registration as well as atmospheric correction. Analysis methods include digital image exploration, feature extraction, thematic classification, change detection, and biophysical characterization. An application-oriented course project will be completed through the self-guided computer labs.

Prerequisite: GEOG272 and GEOG306; or students who have taken courses with comparable content may contact the department.

GEOG473 Geographic Information Systems and Spatial Analysis (3 Credits)

Analytical uses of geographic information systems; data models for building geographic data bases; types of geographic data and spatial problems; practical experience using advanced software for thematic domains such as terrain analysis, land suitability modeling, demographic analysis, and transportation studies.

Prerequisite: GEOG306 and GEOG373; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: GEOG473 or GEOG482.

Formerly: GEOG482.

GEOG475 Geographic Visualization and Digital Mapping (3 Credits)

An overview of the basic concepts and techniques that underlie digital map making and the broader field of geographic visualization for intermediate GIS users. This includes the use of color, map symbolization, map layout, and also the contribution to geographic visualization from the fields of scientific visualization, information visualization, and cognition. Fundamentals of dynamic map design and web mapping will be introduced through the use of animated and interactive maps.

Prerequisite: GEOG373 and GEOG306.

GEOG476 Object-Oriented Computer Programming for GIS (3 Credits)

Expands on conceptual and practical aspects of programming for geographic applications. The main focus of this course is to provide students more advanced programming in object oriented programming languages (i.e. Python). In addition, students will develop a proficiency in applying these advanced programming principles to manipulating spatial data sources within the Geographic Information Systems (GIS).

Prerequisite: GEOG373 and GEOG376; or permission of BSOS-Geography department. And must have completed MATH220; or must have completed or be concurrently enrolled in MATH120, MATH130, or MATH140.

Restriction: Must be in Geography program; or must be in GIS minor.

GEOG498 Topical Investigations (1-3 Credits)

Independent study under individual guidance.

Prerequisite: Restricted to advanced undergraduate students; and 24 credits in GEOG courses. Or restricted to graduate students.

Repeatable to: 6 credits if content differs.

GEOG601 The Nature and Practice of Science (3 Credits)

Introduces students to the nature and practice of science in physical and human geography, including practical methods for research productivity, professional, societal and ethical obligations of scientists, the philosophy of science, and the scientific literature. Students will prepare and critically evaluate research proposals.

Restriction: Permission of BSOS-Geography department.

Credit Only Granted for: GEOG601 or GEOG788N.

Formerly: GEOG788N.

GEOG603 Masters Research Tutorial (3 Credits)

Development of Masters scholarly paper topic, critical literature review, formulation of geographical approach to research methodology. Individual meetings with faculty. Comprehensive exam before the end of the semester.

Prerequisite: GEOG600.

Restriction: Permission of BSOS-Geography department.

Credit Only Granted for: GEOG603 or GEOG610.

Formerly: GEOG610.

GEOG606 Quantitative Spatial Analysis (3 Credits)

Multivariate statistical method applications to spatial problems. Linear and non-linear correlation and regression, factor analysis, cluster analysis. Spatial statistics including: trend surfaces, sequences, point distributions. Applications orientation.

Prerequisite: GEOG305; or permission of BSOS-Geography department.

Credit Only Granted for: GEOG605 or GEOG606.

Formerly: GEOG605.

GEOG608 Comprehensive Portfolio Assessment Summary (1-3 Credits)

Evaluation of a PhD student's portfolio.

Repeatable to: 3 credits.

GEOG609 Seminar in Remote Sensing (3 Credits)

Topics in Remote Sensing: These may include agricultural, forestry, coastal environments, urban environments, and other major applications of remote sensing. Also may focus on new and existing earth observation missions dedicated to land research.

Prerequisite: GEOG480.

Repeatable to: 6 credits if content differs.

GEOG614 Human Dimensions of Global Change (3 Credits)

The intersection of human and biophysical systems from the vantage point of the impact of human actions on the environment are examined. The impact of the biophysical environment on humans is also discussed.

GEOG615 Land Cover and Land Use Change (3 Credits)

This class provides an examination of land cover and land use change science, addressing the causes, impacts and projection of change. Key concepts of land use science are presented and recent research papers and case studies are reviewed. Class consists of lectures, invited presentations and individual student projects and presentations.

Prerequisite: GEOG442, GEOG472, GEOG435, or GEOG473; or permission of BSOS-Geography department.

GEOG617 Land Cover Characterization Using Multi-Spectral Remotely Sensed Data Sets (3 Credits)

Students will be introduced to the image processing steps required for characterizing land cover extent and change. Key components of land cover characterization, including image interpretation, algorithm implementation, feature space selection, thematic output definition, and scripting will be discussed and implemented.

Prerequisite: Permission of BSOS-Geography department.

Jointly offered with: GEOG417.

Credit Only Granted for: GEOG417 or GEOG617.

GEOG618 Seminar in Geomorphology (3 Credits)

Selected topics; this can include discussion of empirical and theoretical research methods applied to geomorphological problems including review of pertinent literature.

GEOG628 Seminar in Climatology (3 Credits)

Selected topics in climatology chosen to fit the individual needs of advanced students.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG630 Climate, Energy, and Policy (3 Credits)

Students will learn about climate change and energy policy from multiple perspectives including social economic, technological, scientific, and behavioural aspects and their interdependence. The course will also consider the report of the Intergovernmental Panel on Climate Change on mitigation and applied cost/benefit analysis of Climate Change.

Prerequisite: Permission of BSOS-Geography department; or enrolled in the Geographical Sciences Graduate Program(s).

Credit Only Granted for: GEOG430, GEOG630, or GEOG788E.

Formerly: GEOG788E.

Additional Information: This course will make occasional use of the popular open source statistical computer language R for practical workshops.

GEOG632 Economic Geography (3 Credits)

An advanced graduate level introduction to the effects of geography on economic activities and the effects of economic incentives, institutions, and activities on the nature and sustainability of human and environmental geographic systems.

Restriction: Permission of BSOS-Geography department.

GEOG636 Qualitative Methods in Geography (3 Credits)

Use of qualitative methods for qualitative geographic research. Design procedures and analysis of qualitative studies are the focus of the course. Includes readings and trying out various methods. Students will be able to present their own research and use it as an example throughout the course.

Restriction: Permission of BSOS-Geography department.

Formerly: GEOG648C.

GEOG638 Seminar in Biogeography (3 Credits)

Topics in Biogeography: Biological aspects of Geography. These may include ecology, biodiversity, climate-vegetation interactions, impacts of global change.

Prerequisite: Must have completed 6 credits of biogeography or ecology; or students who have taken courses with comparable content may contact the department.

Repeatable to: 6 credits if content differs.

GEOG639 Seminar in Physical Geography (3 Credits)

Examination of selected themes and problems in physical geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG640 Polar Remote Sensing (3 Credits)

The harsh environment of the vast polar regions makes them some of the most inaccessible places on Earth. With widespread environmental change already underway, satellite remote sensing is the only way to obtain year-round observations of the polar climate system. The objective of this course is to provide students with an overview of polar remote sensing techniques, including the physical principles of active and passive sensors, orbits, electromagnetic radiation, atmospheric transmission, calibration and validation. We will focus on measurements of the polar oceans, sea ice, glaciers and ice sheets and examine the response of the cryosphere to climate change.

Prerequisite: PHYS171 or PHYS161; and AOSC401 or GEOG301; or with permission of instructor.

Cross-listed with: AOSC642.

Jointly offered with: AOSC440.

Credit Only Granted for: AOSC440, GEOG440, AOSC642, or GEOG640.

GEOG642 Biogeography and Environmental Change (3 Credits)

Biogeographical topics of global significance, including a consideration of measurement techniques, and both descriptive and mechanistic modeling. Topics may include: scale in biogeography, biodiversity, carbon geography, climate and vegetation, interannual variability in the biosphere, land cover, global biospheric responses to climate change, NASA's Mission to Planet Earth and Earth Observation System. The class focuses on both natural and anthropogenic controls, impacts of biogeography on climate and ecosystem services and different methods in biogeography.

Restriction: Permission of BSOS-Geography department. Jointly offered with GEOG442.

Credit Only Granted for: GEOG788C, GEOG642, or GEOG442.

Formerly: GEOG788C.

GEOG646 Programming for GIS (3 Credits)

An introduction to computer programming using Python and web programming languages. It is required for students in the MSGIS program before they enroll in more advanced programming courses (GEOG656 and GEOG657). This course teaches students the fundamental concepts of computer science. Students will learn about the components of a computer program such as data management, conditional statements, iterative statements, and file processing. Students will develop programs and web apps for the purpose of automating tasks and assisting with data analysis.

Additional Information: This class is recommended for all MSGIS students who have no prior computer programming background as well as those who wish to have additional practice. The skills learned in this class will be useful for more advanced courses such as GEOG656 (Programming and Scripting for GIS), GEOG657 (Web Programming), and GEOG650 (Mobile GIS).

GEOG648 Seminar in Cultural Geography (3 Credits)

Examination of selected themes and problems in cultural geography.

Repeatable to: 6 credits if content differs.

GEOG650 MOBILE GIS (3 Credits)

This course covers how to create, test, and publish mobile GIS applications that work across multiple platforms (Android, iOS, and Black Berry Tablet OS) and adapt to a smartphone or tablet display.

Prerequisite: GEOG657.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

GEOG651 Spatial Statistics (3 Credits)

This course is about quantitative analysis of spatial data. It is intended to provide a broad survey of various methods of exploratory statistical data analysis most useful in environmental and social sciences. The course is a mix of theory, methods, and applications geared towards helping students: (1) develop an understanding of the important theoretical concepts in spatial data analysis; and (2) gain practical experience in application of spatial statistics to a variety of social and environmental problems using advanced statistical software.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

GEOG652 Digital Image Processing and Analysis (3 Credits)

Digital image processing and analysis applied to satellite and aircraft land remote sensing data. Consideration is given to preprocessing steps including calibration and geo registration. Analysis methods include digital image exploration, feature extraction thematic classification, change detection, and biophysical characterization. One or more application examples may be reviewed.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in the Geospatial Information Sciences (Graduate Certificate) program.

GEOG653 Spatial Analysis (3 Credits)

Methods of spatial analysis including measuring aspects of geometric features and identifying spatial patterns of geospatial objects that are represented as point, line, network, areal data, and 3-D surfaces.

Prerequisite: GEOG579; or students who have taken courses with comparable content may contact the department.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in the Geospatial Information Sciences (Graduate Certificate) program.

GEOG654 GIS and Spatial Modeling (3 Credits)

Provide foundations and understanding on various issues related to modeling and simulation in GIS context. It will address the concepts, tools, and techniques of GIS modeling, and presents modeling concepts and theory as well as provides opportunities for hands-on model design, construction, and application. The focus will be on raster-based modeling. This course is also application-orientated, particularly in these fields such as terrain modeling, LULC modeling, hydrological modeling, suitability modeling, etc.

Prerequisite: GEOG653.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

GEOG655 Spatial Database System (3 Credits)

This course is designed to help students understand, analyze, design, and implement spatial databases. While the basic concepts and theories of database will be introduced, the focus of this course will be on providing students with hands-on experiences to practice the technical skills used in spatial database design and implementation. SQL, Oracle, and ArcSDE are the key topics.

Prerequisite: GEOG653.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

GEOG656 Advanced Programming for GIS (3 Credits)

Programming and scripting for intermediate GIS users. The fundamental concepts of computer programming will be introduced within the Geoprocessing framework in ArcGIS primarily using Python. Concepts of object-oriented programming and scripting will be presented. Students will develop skills in programming techniques to explore, manipulate and model spatial data using the Geoprocessor methods.

Prerequisite: GEOG653.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

GEOG657 Web Programming (3 Credits)

Intermediate course designed to teach students the techniques for Web development, particularly creating dynamic and data-driven Web applications. Introduces a high-level, object-oriented programming language such as VB.Net and the designing, coding, debugging, testing, and documenting for the development of Web-based applications. Other popular Web development tools such as DHTML, CSS and PHP are also covered.

Prerequisite: GEOG653.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Geospatial Information Sciences program.

Credit Only Granted for: GEOG657 or GEOG788R.

Formerly: GEOG788R.

GEOG658 Seminar in Historical Geography (3 Credits)

An examination of themes and problems in historical geography with reference to selected areas.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG660 Advanced Remote Sensing Using Lidar (3 Credits)

Lidar, also known as laser scanning, is an active remote sensing tool that can produce high-resolution point clouds. Lidar is being applied to problems such as terrain modeling, biomass estimation, change detection, feature extraction, and measuring tree canopy. Topics covered are fundamentals of lidar, current developments in lidar technology, and different applications where lidar is being used. Students will get hands-on learning about lidar data management, processing, and analysis.

Prerequisite: GEOG652.

Recommended: GEOG656 and GEOG654.

Credit Only Granted for: GEOG660 or GEOG788G.

Formerly: GEOG788G.

GEOG661 Fundamentals of Geospatial Intelligence (3 Credits)

Geospatial Intelligence (GEOINT) is the collection, analysis, visualization and dissemination of geospatial information to support decision-making. This course introduces the fundamental knowledge required to become a successful GEOINT practitioner, including the history of the GEOINT discipline, the intelligence applications of remote sensing and Geographic Information Systems (GIS) technologies, and how GEOINT products are used to support national security and humanitarian missions. Upon completion of this course you will understand the roles that technology, policy, doctrine, government, and industry play in shaping the Geospatial Intelligence discipline, and develop the technical knowledge and domain expertise to create basic GEOINT products that provide context for decision makers.

GEOG662 Advances in GIS and Remote Sensing (3 Credits)

Focuses on state-of-the-art advances in geographic information science and remote sensing as they support geospatial intelligence. Focus on synergies between GIS and remote sensing in informatics, computer science, and spatial engineering, and their application to problem domains in human systems, physical systems, and cyberspace. Advances in GIS presents recent advances regarding fundamental issues of geo-spatial information science (space and time, spatial analysis, uncertainty modeling and geo-visualization), and new scientific and technological research initiatives for geo-spatial information science (such as spatial data mining, mobile data modeling, and location-based services). Advances in remote sensing will provide opportunity to understand and work with latest developments in the Remote Sensing datasets. The curriculum covers wide range of remote sensing data interpretation and their processing techniques.

Restriction: Students taking the course must be familiar with data structures, basic GIS and RS concepts, and demonstrate basic understanding of using GIS and RS software. And must be enrolled in Geographical Sciences MPS or graduate certificate program; or permission of BSOS-Geography department.

GEOG663 Big Data Analytics (3 Credits)

Designed to introduce statistical analysis over big data sets (and tackling big data problems), primarily in geography and spatial sciences, but with broader appeal throughout the socio-behavioral sciences. Students will be introduced to a range of methods that can be applied to the exploration, modeling, and visualization of big quantitative data. This course explores data fusion, statistical analysis, and data-mining for geospatial and non-geospatial data in structured and unstructured form, with an emphasis on large silos of data across diverse sources and assumptions. Topics will include open sourcing, metadata schemes, data standards and models, data-access, data-mining, clustering methods, classifiers, data reduction, machine learning, filtering schemes, real-time and streaming data, archiving and preservation, and handling uncertainty.

Recommended: Students taking the course must be familiar with data structures, basic GIS and RS concepts, and demonstrate basic understanding of using GIS and RS software.

Restriction: Permission of BSOS-Geography department; or must be enrolled in Geographical Sciences MPS or graduate certificate program.

GEOG664 GEOINT Systems and Platforms (3 Credits)

There are numerous systems and platforms that support the collection, visualization and dissemination of Geospatial Intelligence (GEOINT). Platforms such as satellites and aircraft carry sensors systems that can detect both physical and man-made objects on the earth. Ground-based processing systems are used to analyze and visualize sensor data, and also to create and disseminate GEOINT products that guide decision-making. In this course you will learn how to develop and implement source-to-screen GEOINT workflows, and will understand how to use a system of systems approach to describe the programmatic and technical strengths and weaknesses of many different GEOINT systems and platforms.

GEOG665 Algorithms for Geospatial Intelligence Analysis (3 Credits)

Exposes students to fundamental algorithms in geospatial intelligence and their application in methodological and substantive domains, and their implementation in computer programs and software systems. Current topics include spatial and space-time analysis, cartographic transformations, data compression and reduction, MapReduce and distributed data access, genetic algorithms, clustering and indexing algorithms, filtering algorithms, geometry and tessellation algorithms, routing algorithms, localization algorithms, and complexity and scaling. Implementation of algorithms will be explored through pseudo-code and a variety of scripting, data access, and programming languages.

Recommended: Students taking the course must be familiar with data structures, basic GIS and RS concepts, and demonstrate basic understanding of using GIS and RS software.

Restriction: Permission of BSOS-Geography department; or must be enrolled in Geographical Sciences MPS or graduate certificate program.

GEOG666 Drones for Data Collection (3 Credits)

Topics covered in this class include: how to prepare students to obtain their FAA Remote Pilot License, understand how to pick drone systems for a data need, and utilize Pix4D to process drone imagery. Before talking about data students will learn about drone and aviation specific laws that will affect them while carrying out operations. Once legal limitations of drone flights have been covered the course will shift toward learning how to select a drone system based on specifications of the equipment and needs of the project and flying. Students will then move on to data processing utilizing Pix4D, Python, and Bash to clean data and automate processing.

Prerequisite: GEOG646 or GEOG656.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in Graduate Certificate: Professional Studies-Geospatial Information Sciences.

Credit Only Granted for: GEOG688E or GEOG666.

Formerly: GEOG688E.

GEOG668 Seminar in Economic Geography (3 Credits)

Examination of themes and problems in the field of economic geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG670 Open Source GIS (3 Credits)

An exploration of techniques for using Free and Open Source Software for GIS (FOSS4g) from conception to final presentation of results. Advanced concepts and techniques including enterprise GIS, spatial SQL, parallel processing, and displaying the results of GIS analysis over the Internet will also be covered.

Credit Only Granted for: GEOG670 or GEOG788A.

Formerly: GEOG788A.

Additional Information: Students do not need any experience using open source GIS, but students are expected to be comfortable using a desktop GIS such as ArcGIS.

GEOG671 Remote Sensing Instruments and Observations (3 Credits)

Detailed examination of land remote sensing instruments, observatories and resultant measurements in the optical portion of the EM spectrum. Includes computer-based exercises that examine the importance of data geo-registration and radiometric calibration in land measurements.

Prerequisite: GEOG472; or students who have taken courses with comparable content may contact the department; or permission of BSOS-Geography department.

GEOG672 Biophysics of Optical Remote Sensing (3 Credits)

Biophysical principles, phenomena and processes underlying multispectral remote sensing in the optical portion of the EM spectrum. Includes computer-based exercises that explore the biophysical basis of land patterns and dynamics observed in remote sensing data.

Prerequisite: GEOG472; or students who have taken courses with comparable content may contact the department; or permission of BSOS-Geography department.

GEOG673 GIS Modeling (3 Credits)

Process modeling and spatial analysis within the GIS context.

Introduces theoretical fundamentals and conceptual approaches to frame and represent geographical phenomena and spatial decision making.

Prerequisite: GEOG306 and GEOG473; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: GEOG673 or GEOG695.

Formerly: GEOG695.

GEOG674 GIS Spatial Databases (3 Credits)

Introduces fundamental concepts and practical skills required to design, implement and use GIS databases. Students will learn to store and represent geospatial data in databases, design and create a spatial database, manage and query geospatial data, and deliver and present geospatial data.

Prerequisite: GEOG473; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: GEOG674 or GEOG696.

Formerly: GEOG696.

GEOG676 Advanced Programming for Geography and Remote Sensing (3 Credits)

Comprehensive instruction is provided in the advanced use of a commercial programming language and analysis tool used for scientific programming and data visualization, with an emphasis on applications in geography and remote sensing or GIS.

Prerequisite: GEOG376; or permission of BSOS-Geography department.

GEOG677 Web GIS (3 Credits)

This course is designed to: (1) introduce the concepts and theories that are related to an increasingly important technology b (2) introduce various technologies or techniques for creating, analyzing, and disseminating GIS data and services via the Web. Students will be required to practice almost all of the Web GIS tools including client side mapping frameworks like the ArcGIS API for JavaScript, Mapbox, Leaflet, Google Map API, OpenLayers; server side systems including ArcGIS Enterprise (Server/Portal/DataStore), GeoServer; data formats for the web WMS, WFS, Feature Services, MapServices. Students will also be exposed to the experience of working with the Cloud environment such as AWS EC2 and Azure.

Recommended: GEOG676.

Restriction: Permission of BSOS-Geography department.

GEOG679 Seminar in Urban Geography (3 Credits)

Post-industrial urbanization; urban planning and management; metropolitan systems; internal structure of the city; use of techniques in urban locational research; transportation and land use.

Repeatable to: 6 credits if content differs.

GEOG680 GEOINT Networks (3 Credits)

Networks are an important part of the Geospatial Intelligence (GEOINT) cycle, from the sensor networks that are used to collect raw geospatial information to the telecommunication networks that are used to disseminate finished GEOINT products. Transportation networks, computer networks, social networks, and many other man-made and natural features can also be characterized by a link-node network topology, and can be studied using network science methods. Upon completion of this course you will be able characterize and classify real-world GEOINT networks and their components, understand network dynamics including routing, scalability, and robustness, and be able to apply engineering methods for network design and network analysis.

GEOG681 Introduction to Computational Social Science (3 Credits)

Introduction to Computational Social Science serves as an introduction to the basis for computational social science (CSS) across diverse disciplines and topics at the intersection of the socio-behavioral sciences, physical sciences, and computing sciences. We will explore the foundations for CSS in different subject domains, as the methods used to build representations of social science entities, phenomena, and processes in computational media. We will also critique applied computational social science as it relates to topics that cut across the socio-behavioral sciences, or that specialize within particular socio-behavioral science domains.

Credit Only Granted for: GEOG681 or GEOG788W.

Formerly: GEOG788W.

GEOG682 Open Source Intelligence (3 Credits)

Open Source Intelligence (OSINT) is information that is publicly available that is collected and analyzed to support decision-making. The collection and analysis of OSINT is often considered to be the first step in developing an all-source intelligence product, where OSINT is fused with Geospatial Intelligence (GEOINT), Signals Intelligence (SIGINT), and Measurement and Signature Intelligence (MASINT), and Human Intelligence (HUMINT). In this course you will learn about the sources, ethics, and methods that are associated with OSINT, and will also develop knowledge and skills related to open-source geospatial technologies and organizations such as the Open Geospatial Consortium (OGC).

GEOG683 Hazards and Emergency Management (3 Credits)

Timely and accurate Geospatial Intelligence (GEOINT) is essential for protecting people from hazardous events such as floods, wildfires, tsunamis, hurricanes, industrial accidents, and terrorist attacks. GEOINT plays a critical role in all four stages of emergency management: preparedness, mitigation, response, and recovery. The use of remote sensing and Geographic Information Systems (GIS) before, during, and after Hurricane Katrina and the 9/11 terror attacks are two of the case studies that are discussed during this course. You will develop a deeper understanding of the emergency management successes and failures that occurred during these historic and deadly events, and learn the technical skills to develop and disseminate GEOINT products that support decision-making at all four stages of emergency management.

GEOG685 Machine Learning and Data Mining (3 Credits)

Introduces statistical and spatial analysis over machine learning in mining data sets (and tackling big data problems), primarily in geography and spatial sciences, but with broader appeal throughout the socio-behavioral sciences. Students will be introduced to a range of methods that can be applied to the exploration, modeling, and visualization of big quantitative data. This course explores data cleaning, statistical analysis, and data-mining for geospatial and non-geospatial data in structured and unstructured form, with an emphasis on large silos of data across diverse sources and assumptions. Topics will include open sourcing, metadata schemes, data standards and models, data-access, data-mining, clustering methods, classifiers, data reduction, machine learning, filtering schemes, real-time and streaming data, archiving and preservation, and handling uncertainty.

Prerequisite: GEOG665 or equivalent.

GEOG686 Mobile GIS and Geocomputing (3 Credits)

An introduction to mobile GIS, to the programming concepts underlying mobile GIS development, and to the design and implementation of a mobile GIS application. Covers how to develop, test, and publish mobile GIS native apps working across two mobile platforms: Android and iOS. Leverages the capabilities of JavaScript, Swift, Google maps, ArcGIS Server and runtime SDK to developing and publishing mobile GIS apps.

Prerequisite: Permission of BSOS-Geography department; or must be enrolled in Geographical Sciences MPS or graduate certificate program.

Recommended: Students taking the course must be familiar with data structures, basic GIS concepts, and demonstrate basic understanding of object-oriented programming under GIS environment.

Credit Only Granted for: GEOG477, GEOG498V, GEOG788V or GEOG777.

Additional Information: Tablets that run android and iOS will be loaned to registered students at no cost.

GEOG687 Applied GEOINT- Regional Geostrategic Issues (3 Credits)

Applies a geospatial intelligence (GEOINT) lens when examining the political, military, economic and cultural effects of geography in historical and contemporary terms: specific emphasis is placed on the role of geography in the formulation of regional, e.g., Africa, military/political policy in land power, sea power, and air power. Comprehensive geopolitical theories will be incorporated with geospatial technologies as analytical tools in this course.

GEOG688 Selected Topics in GIS (1-3 Credits)

Readings and discussion on selected topics in the field of Geographic Information Science (GIS).

Repeatable to: 15 credits if content differs.

GEOG693 Independent Study in GEOINT (3 Credits)

In order to broaden the scope of the knowledge for our students in the ever-changing technologies in Geospatial Intelligence, the independent study course gives students an opportunity to explore a topic of interest under the close supervision of a faculty with expertise in the field. The course may include directed readings, applied work, assisting the faculty member with a research project, carrying out an independent research project, or other activities deemed appropriate by the supervising faculty member and the program.

Restriction: Permission of the Geospatial Intelligence program.

GEOG694 Computerized Map Projections and Transformations (3 Credits)

Computer generated projections; techniques for transforming one coordinate system to another; software for producing different map projections; mathematical and perceptual problems in producing and using projections.

Prerequisite: GEOG694; or students who have taken courses with comparable content may contact the department; or permission of BSOS-Geography department.

GEOG697 Capstone Project (3 Credits)

An independent research project that demonstrates competence in geospatial intelligence technologies. This project can originate from an internship, from relevant work at a current or past employer, or can be developed in conjunction with a department faculty. The student will prepare a project report and presentation which shall contain an executive summary, background information including a literature review and establishment of requirements, a detailed technical description of the project data and methods, a discussion of results obtained, and final conclusions and recommendations. The final project submission will include all data, computer code and/or workflow documentation required to replicate the project results. In completing this project, students develop a concrete example of how GEOINT technologies can be applied to solve real-world problems, and begin developing a portfolio that can be presented to potential employers.

Prerequisite: 24 credits in GEOG courses.

Restriction: Students taking the course must be familiar with data structures, basic GIS and RS concepts, and demonstrate basic understanding of using GIS and RS software. And must be enrolled in Geographical Sciences MPS or graduate certificate program; or permission of BSOS-Geography department.

GEOG698 Selected Topics in Geography (1-3 Credits)

Readings and discussion on selected topics in the field of geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 12 credits if content differs.

GEOG699 Seminar in Computer Cartography (3 Credits)

Selected topics in computer-assisted cartography: algorithms for linear generalization, containing three-dimensional mapping and continuous-time mapping.

Prerequisite: GEOG373; or students who have taken courses with comparable content may contact the department; or permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG718 Seminar in Integrative Studies (3 Credits)

Selected topics integrating various areas of study within the field of geography and/or related disciplines.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG732 Spatial Econometrics (3 Credits)

An introduction to modern econometric techniques in general and spatial econometrics in particular, using the popular open source statistical computer language R. A focus on using statistical computing to produce analytical reports for real-world applications, research papers, and dissertations.

Prerequisite: Permission of BSOS-Geography department.

Jointly offered with: GEOG432.

Credit Only Granted for: GEOG432 or GEOG732.

GEOG738 Seminar in Human Geography (3 Credits)

Selected topics in human geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG748 Seminar in Physical Geography (3 Credits)

Selected topics in physical geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG749 Seminar in Biogeography (3 Credits)

Selected topics in biogeography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG770 Algorithms for Geospatial Computing (3 Credits)

Geometric primitives and algorithms for discrete and continuous spatial data processing. Point data representation and analysis: spatial data structures, neighbor finding and range queries, clustering algorithms. Terrain modeling: grids and TINs, algorithms and data structures for building and querying TINs, gridding and interpolation. Terrain analysis: segmentation through watershed computation, algorithms for visibility computation. Applications to LiDAR data processing and analysis for forest management, urban modeling, and coastal data mapping.

Prerequisite: GEOG276 or permission of instructor.

Jointly offered with: GEOG470.

Credit Only Granted for: CMSC498Q, CMSC401, CMSC788I, GEOG470, GEOG498I, GEOG770, or GEOG788I.

Formerly: GEOG788I.

GEOG777 Mobile GIS Development (3 Credits)

Designed as an introduction to mobile GIS, to the programming concepts underlying mobile GIS development, and more importantly, to the design and implementation of a mobile GIS application. Covers how to develop, test, and publish mobile GIS native apps working across two mobile platforms: Android and iOS. This course will also try to leverage the capabilities of JavaScript, Swift, Google maps, ArcGIS Server and runtime SDK to developing and publishing mobile GIS web apps.

Prerequisite: Permission of BSOS-Geography department; or must be enrolled in Geographical Sciences Phd or MS degree program.

Restriction: Must be in a major within the BSOS-Geography department; or permission of BSOS-Geography department.

Credit Only Granted for: GEOG477, GEOG498V, GEOG788V or GEOG777.

Formerly: GEOG788V.

GEOG778 Seminar in Remote Sensing (3 Credits)

Selected topics in remote sensing.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG779 Seminar in Geographic Information Science (3 Credits)

Selected topics in geographic information science.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 6 credits if content differs.

GEOG788 Selected Topics in Geography (1-3 Credits)

Readings and discussion on selected topics in the field of geography.

Restriction: Permission of BSOS-Geography department.

Repeatable to: 12 credits if content differs.

GEOG789 Independent Readings (1-8 Credits)

Independent reading as arranged between a graduate faculty member and graduate student.

Repeatable to: 8 credits if content differs.

GEOG790 Internship in Geography (3 Credits)

Field experience in the student's specialty in a Federal, state, or local agency or private business. Research paper required.

GEOG795 Professional Practices Seminar (1 Credit)

Development and preparation of a resume, selecting and helping reference writers, conducting successful interviews, negotiating an employment package, giving professional presentations, proposal preparation, writing reports, codes of ethics and responsibilities. Presentations from practitioners in GIS field. Basic project management skills and strategies in preparation for professional project.

Restriction: Must be in Geospatial Information Sciences (Master's) program.

GEOG796 GIS Project Management (3 Credits)

Project management methodology is covered, emphasizing implementing and integrating GIS into broader projects. Topics include project initiation, planning, scope, scheduling, budgeting and risk management.

Prerequisite: GEOG653, GEOG652, and GEOG606.

Restriction: Must be in Geospatial Information Sciences (Master's) program; or must be in the Geospatial Information Sciences (Graduate Certificate) program.

Credit Only Granted for: GEOG796 or INFM706.

Formerly: INFM706.

GEOG797 Professional Project (3 Credits)

Data and materials can originate from an internship (internal or external) or from relevant work experience with current employer. Under direction of faculty advisor, students will prepare a project report containing explanation of the requirements for the work, technical account of the activities undertaken, including literature review, description of methods and approaches taken, a critical discussion of results, along with conclusions and recommendations developed from the project.

Final project will consist of a full-fledged GIS application that is up and running and can be tested, providing potential employers with a portfolio demonstrating student's ability to manage and develop a GIS application in real world situations.

Restriction: Must be in Geospatial Information Sciences (Master's) program.

GEOG798 Selected Topics in Geography: Seminar Series (1 Credit)

Readings and discussions on selected topics in the field of geography.

Repeatable to: 6 credits if content differs.

GEOG799 Master's Thesis Research (1-6 Credits)**GEOG898 Pre-Candidacy Research (1-8 Credits)****GEOG899 Doctoral Dissertation Research (1-8 Credits)**

GEOL - Geology

GEOL412 Geology of the Terrestrial Planets (3 Credits)

Geological features of Mercury, Venus, Mars and the Moon with an emphasis on results from recent NASA planetary mission. Topics include interior structure, impact cratering, tectonic and volcanic history, surface conditions, climate change, and habitability.

Prerequisite: GEOL341 or GEOL340.

Credit Only Granted for: GEOL489A or GEOL412.

Formerly: GEOL489A.

GEOL413 Geoscientific Modeling (3 Credits)

A model is a simplified representation of reality. Modeling is implicit or explicit in almost everything we do as geoscientists. Model construction, coding, and the concepts of parsimony vs complexity, robustness, validation, uncertainty, and the scientific interpretation of simulation results. Problem sets, independent study and participatory discussion of modeling applications in the current literature.

Prerequisite: MATH115; and two 400-level GEOL courses.

Recommended: Some experience in computer programming.

Jointly offered with: GEOL613.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL413, GEOL489G, GEOL613 or GEOL789G.

Formerly: GEOL489G.

GEOL423 Optical Mineralogy (4 Credits)

The optical behavior of crystals with emphasis on the theory and application of the petrographic microscope.

Prerequisite: GEOL100 or GEOL120; and GEOL110; and GEOL322. And CHEM131 and CHEM132; or (CHEM135 and CHEM136); or CHEM103.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL431 Vertebrate Paleobiology (4 Credits)

A survey of the evolution of the vertebrates, encompassing information from the diversity of living members, but concentrating on the contribution of the fossil record. Emphasis is on the phylogenetic systematics, comparative and functional anatomy, developmental biology, and stratigraphic distribution of major extinct and extant groups.

Prerequisite: BSCI207, BSCI392, GEOL104, GEOL204, or GEOL331; or permission of CMNS-Geology department.

GEOL435 Environmental Geochemistry (3 Credits)

An understanding of geochemical cycles of Earth's surface systems including soils, rivers, lakes, and estuaries and causes and implications of alteration of geochemical cycles. Topics include chemical weathering, soils, chemical composition of inland waters, hydrologic tracers, salinization, eutrophication, nutrient and metal pollution, and global geochemical cycles.

Prerequisite: MATH115; and (GEOL100 or GEOL120); and (GEOL436 or GEOL444). And CHEM131 and CHEM132; or (CHEM135 and CHEM136).

Restriction: Nondegree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL489W or GEOL435.

Formerly: GEOL489W.

GEOL436 Principles of Biogeochemistry (3 Credits)

An introduction to the basic principles of biogeochemistry including aspects of organic geochemistry, biochemistry, microbiology, global geochemical cycles, the origin of life and paleoenvironmental evolution.

Prerequisite: MATH120 or MATH140; or must have completed MATH220. And (GEOL100 or GEOL120); and GEOL322. And CHEM131 and CHEM132; or (CHEM135 and CHEM136).

Cross-listed with: AOSC436.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL436 or AOSC436.

GEOL437 Global Climate Change: Past and Present (3 Credits)

Introduction to the processes by which climate varies, the paleoclimate record, and projections of climate change into the 21st century, including discussion of climate sensitivity to external radiative forcing.

Prerequisite: MATH115 or MATH140; and (GEOL100 or GEOL120); and (CHEM131 or CHEM135); and (CHEM132 or CHEM136).

Cross-listed with: AOSC437.

Credit Only Granted for: AOSC437 or GEOL437.

GEOL443 Petrology (4 Credits)

Study of igneous and metamorphic rocks: petrogenesis, distributions, chemical and mineralogical relations, macroscopic and microscopic descriptions, geologic significance.

Prerequisite: GEOL322. And CHEM131 and CHEM132; or (CHEM135 and CHEM136); or CHEM103. And must have completed or be concurrently enrolled in GEOL423; and (GEOL100 or GEOL120); and GEOL110.

Corequisite: Permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL444 Low Temperature Geochemistry (4 Credits)

Basic chemical principles, thermodynamics, and kinetics of low-temperature inorganic and organic geochemical reactions in a wide range of surface environments. These geochemical tools will be used to provide a context for understanding elemental cycling and climate change. Laboratories will include problem sets as well as wet chemical and mass spectrometric techniques used in low temperature geochemistry.

Prerequisite: GEOL322, GEOL100, and MATH115. And CHEM103; or (CHEM131 and CHEM132); or (CHEM135 and CHEM136).

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL445 High Temperature Geochemistry (4 Credits)

Review of chemical principles and their use in understanding processes of Earth, and solar system formation and differentiation. Topics include nucleosynthesis and cosmochemical abundances of elements, bonding and element partitioning, equilibrium thermodynamics and phase stabilities, radiogenic isotopes and geochronology, kinetics, and diffusion.

Prerequisite: GEOL322, GEOL100, and MATH115. And CHEM131 and CHEM132; or (CHEM135 and CHEM136); or CHEM103.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL446 Geophysics (3 Credits)

An introduction to modern geophysics. Topics include: global plate tectonics, plate motion, triple junctions, geomagnetism, earthquakes and faulting, reflection and refraction seismology, gravity and isostasy, heat flow and mantle dynamics, deep interior of the Earth, geophysical observations and measurements.

Prerequisite: PHYS141, MATH141, and MATH140; and (GEOL100 or GEOL120).

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL447 Observational Geophysics (3 Credits)

An introduction to practical signal processing, data analysis, and inverse theory in geophysics.

Prerequisite: MATH140 and MATH141; and (PHYS141, PHYS161, or PHYS171).

GEOL451 Groundwater (3 Credits)

An introduction to the basic geologic parameters associated with the hydrologic cycle. Problems in the accumulation, distribution, and movement of groundwater will be analyzed.

Prerequisite: GEOL110 and MATH140; and (GEOL120 or GEOL100); and (CHEM131 and CHEM132; or (CHEM135 and CHEM136); or CHEM103). Or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor; and junior standing or higher.

GEOL452 Watershed and Wetland Hydrology (3 Credits)

Physical processes by which water moves in watershed and wetland systems. Topics include: precipitation, infiltration, flow in the unsaturated zone, streamflow generation processes, and groundwater flow.

Restriction: Junior standing or higher; and all other students require the permission of the instructor.

GEOL453 Ecosystem Restoration (3 Credits)

Overview of ecosystem functions across biomes/geologic settings, and considerations and tradeoffs in ecosystem restoration strategies. Specific case studies and discussions will be aimed at understanding how structure can influence biophysical and biogeochemical processes supporting ecosystems, and then describes how rates, timing, and location of physical, chemical, and ecosystem processes can be altered by different restoration strategies to enhance ecosystem services.

Prerequisite: MATH120 or MATH140; or must have completed MATH220. And (CHEM131 or CHEM135); and (CHEM132 or CHEM136); and (GEOL100, GEOL120, or ENST200).

Restriction: Junior standing or higher; and permission of instructor is required of non-degree-seeking students.

Credit Only Granted for: GEOL453 or GEOL489L.

Formerly: GEOL489L.

GEOL455 Marine Geophysics (3 Credits)

Plate tectonics, earthquakes and faulting, isostasy and gravity, heat and mantle dynamics, ocean ridges and transform faults, hydrothermal vents, trenches and oceanic islands, subduction zones, accretionary and erosion wedges, sedimentary basins and continental rifts. Exploration of the oceans using geophysical methods.

Prerequisite: MATH141 and MATH140; and (GEOL120 or GEOL100). Or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL455 or GEOL489E.

Formerly: GEOL489E.

GEOL456 Engineering Geology (3 Credits)

An overview of engineering geology with an emphasis on physical understanding of natural hazards and natural resources. General theories of stress and strain, failure criteria, frictional stability, fluid flow in porous media and poroelasticity are introduced. Quantitative approaches on earthquakes, landslides, land subsidence, and geotechnical aspects of oil/gas exploration are discussed.

Prerequisite: PHYS141 and MATH141; and (GEOL120 or GEOL100). Or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL456 or GEOL489Z.

Formerly: GEOL489Z.

GEOL457 Seismology (3 Credits)

General overview of the basics of seismology, starting with wave propagation, seismic reflection and refraction. Applications to the determination of the seismic velocity and anisotropy structure of the Earth. Earthquake generation, postseismic deformation and creep events, relation to faulting and plate tectonics.

Prerequisite: GEOL120 or GEOL100; and (MATH141, GEOL110, and MATH140). Or permission of CMNS-Geology department.

Recommended: PHYS171, PHYS141, or PHYS161.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL457 or GEOL489A.

Formerly: GEOL489A.

GEOL460 Field Geophysics (4 Credits)

Students will become familiar with geophysical instrumentation used for both scientific and industrial applications. Students will be given an introduction to the use of geophysical instrumentation for data collection, processing, and analysis, design of field experiments for investigating field geophysical problems, and an introduction to the theory of instrument design and use. Instruments that will be covered include (but are not limited to): broadband seismometers, geophones, ground-penetrating radar, magnetotellurics, and Global Positioning Satellites.

Prerequisite: GEOL100 or GEOL120, MATH140, MATH141, and (PHYS141, PHYS161, or PHYS171).

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL472 Tectonics (3 Credits)

Study of the development of the lithosphere on Earth and other rocky planets and moons. Emphasis on student-led discussions. Improvement of scientific writing.

Prerequisite: GEOL120 or GEOL100; and (GEOL102, GEOL341, and GEOL110).

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL473 Origin and Evolution of the Continents (3 Credits)

Introduction to current theories regarding the origin and evolution of the continents. Emphasis on development of critical reading and reasoning skills, and improvement of verbal and written communication.

Prerequisite: GEOL445 and GEOL443; or permission of instructor.

Restriction: Non-degree-seeking students require the permission of the instructor.

Formerly: GEOL489I.

GEOL488 Geology Colloquium (1 Credit)

Contemporary research topics and issues in geosciences are explored through the weekly Geology departmental colloquium and discussion of its contents.

Prerequisite: At least one 300 or 400-level Geology course of at least 3 credits.

Restriction: May not be taken concurrently with GEOL497 or GEOL497H.

Repeatable to: 4 credits.

GEOL489 Special Topics (3 Credits)

Recent advances in geology.

Prerequisite: Must have completed at least 2 upper-level GEOL courses plus one additional GEOL course.

Corequisite: GEOL393.

Restriction: Must be in Geology program; and junior standing or higher.

GEOL490 Geology Field Camp (6 Credits)

Intense field geology course taught off campus during the summer. Students describe and compile maps of formations and structures from outcrops, subsurface, and remotely sensed data. Special fees required.

Prerequisite: GEOL341 and GEOL443.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL491 Environmental Geology Field Camp (3-6 Credits)

Intensive field course designed for students of environmental geology. Students will learn to make maps, to describe soil profiles and site characteristics, to monitor hydrologic and groundwater conditions, and to measure geologic structures and stratigraphic sections.

Prerequisite: GEOL341, GEOL342, and GEOL451; or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL490 or GEOL491.

GEOL497 Recent Advances: Geology (3 Credits)

A survey of important recent advances in geological sciences in the context of the methods and practices of scientific research.

Prerequisite: Must have completed at least 2 upper-level GEOL courses.

Corequisite: GEOL393; and a third upper-level geology course.

Restriction: Must be in Geology program; and GPA of 3.0 or better in both overall and in all courses required for the major; and senior standing; and to be taken as late as possible in the program.

Credit Only Granted for: GEOL497 or GEOL489H.

Formerly: GEOL489H.

GEOL499 Special Problems in Geology (1-3 Credits)

Intensive study of a special geologic subject or technique selected after consultation with instructor. Intended to provide training or instruction not available in other courses which will aid the student's development in his or her field of major interest.

Prerequisite: (GEOL120 or GEOL100; and (GEOL102 and GEOL110)); or students who have taken courses with comparable content may contact the department. And permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL612 Geology and Geophysics of the Terrestrial Planets (3 Credits)

Geological features of Mercury, Venus, Mars and the Moon with an emphasis on results from recent NASA planetary mission. Class is organized to follow geological processes or observation throughout the inner solar system. Topics covered include interior structure, impact cratering, tectonic and volcanic history, surface conditions and climate change.

Prerequisite: Permission of CMNS-Geology department; or (GEOL446 and MATH141).

Recommended: Familiarity with MATLAB or MATHEMATICA.

Credit Only Granted for: GEOL680 or GEOL789A.

Formerly: GEOL789A.

GEOL613 Geoscientific Modeling (3 Credits)

A model is a simplified representation of reality. Modeling is implicit or explicit in almost everything we do as geoscientists. Model construction, coding, and the concepts of parsimony vs complexity, robustness, validation, uncertainty, and the scientific interpretation of simulation results. Problem sets, independent study and participatory discussion of modeling applications in the current literature.

Prerequisite: Must have completed MATH115 or equivalent; and any two 400 level GEOL courses, or equivalent. Or permission of instructor.

Recommended: Some experience in computer programming will be helpful but not necessary.

Jointly offered with: GEOL413.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL413, GEOL489G, GEOL613 or GEOL789G.

Formerly: GEOL789G.

GEOL614 Thermodynamics of Geological Processes (3 Credits)

Thermodynamics and its application to problems in mineralogy, petrology and geochemistry. Systematic development of the laws of thermodynamics and the principles of chemical equilibrium as applied to geological problems.

Prerequisite: PHYS142, GEOL322, and MATH141; and must have completed CHEM113.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL615 Planetary Habitability and Surface Chemistry (3 Credits)

Introduction to emerging areas of research pertaining to the formation of planetary bodies, the evolution of habitable environments, and the capacity of life to emerge in environments found within and/or outside of our Solar System.

Prerequisite: GEOL445; or permission of instructor.

Credit Only Granted for: GEOL615 or GEOL789B.

Formerly: GEOL789B.

GEOL635 Environmental Geochemistry (3 Credits)

Geochemical cycles of Earth's surface systems including soils, rivers, lakes, and estuaries and causes; and implications of their alteration. Topics include chemical weathering, soils, chemistry of inland waters, hydrologic tracers, salinization, eutrophication, nutrient and metal pollution, and global geochemical cycles.

Prerequisite: MATH115; and (GEOL100 or GEOL120); and (GEOL436 or GEOL444). And CHEM131 and CHEM132; or (CHEM135 and CHEM136).

Restriction: Nondegree-seeking students require the permission of the instructor. Jointly offered with GEOL435.

Credit Only Granted for: GEOL635, GEOL789W, GEOL435 or GEOL489W.

Formerly: GEOL789W.

GEOL636 Ecosystem Restoration (3 Credits)

A further understanding of ecosystem functions across biomes/geologic settings, and developing practical applications in ecosystem restoration strategies through a graduate level project. Specific case studies and discussions will be aimed at understanding how structure can influence biophysical and biogeochemical processes supporting ecosystems, and then describes how rates, timing, and location of physical, chemical, and ecosystem processes can be altered by different restoration strategies to enhance ecosystem services. A project will then be used to apply restoration principles towards solving tangible environmental problems and communication to managers.

Prerequisite: MATH120 or MATH140; and (CHEM131 or CHEM135); and (CHEM132 or CHEM136); and (GEOL100, GEOL120, or ENST200).

Restriction: Equal preference is given to students enrolled in GEOL, MEES, CONS, ENST, AOSC, and civil and environmental engineering graduate programs; and permission of Instructor required for non degree seeking students.

Credit Only Granted for: GEOL453 or GEOL489L.

Formerly: GEOL489L.

GEOL647 Observational Geophysics (3 Credits)

Introduces graduate students to instrument design and performance, signal processing, data analysis and inverse theory in geophysics.

Prerequisite: MATH140, MATH141, and PHYS141; and (PHYS161 or PHYS171).

Credit Only Granted for: GEOL7890 or GEOL647.

Formerly: GEOL7890.

GEOL650 Isotope and Trace Element Geochemistry (3 Credits)

Trace elements and isotopes in geology, including modern applications in geochronology and petrogenesis.

Prerequisite: GEOL443; or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL651 Statistics for Geoscientists (3 Credits)

Practical approach to basic statistics applied in the geosciences.

Experimental design, elementary statistics and probability, sequence analysis, spatial analysis, linear regression, nonparametric statistics, bivariate, multivariate and principal components analysis of variance, hypothesis testing. Problem sets and participatory discussion of statistical applications in the current literature.

Prerequisite: MATH115; and non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL789V or GEOL651.

Formerly: GEOL789V.

GEOL652 Advanced Watershed and Wetland Hydrology (3 Credits)

Physical and chemical processes in watershed and wetland systems: with an emphasis on redox reactions.

Prerequisite: GEOL452; or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL653 Advanced Problems in Economic Geology (3 Credits)

A systematic study of particular ore deposit types or areas of mineralization, primarily involving major economically important metals. Geologic setting, mineralogy and form and character of the ore bodies, chemical and physical factors affecting source, transport and deposition of ore forming fluids.

Prerequisite: GEOL453.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL654 Fluvial Geomorphology Seminar (3 Credits)

Fluvial geomorphology is the study of the movement of water and sediment in stream channels. This includes: formation of channels, open channel hydraulics, sediment transport or bedload and suspended load, river morphology and landscape evolution. The course is designed for graduate students and advanced undergraduates.

Recommended: GEOL452 and GEOL340.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL654 or GEOL789B.

Formerly: GEOL789B.

GEOL655 Marine Geophysics (3 Credits)

An introduction to geophysical aspects of global tectonics. Quantitative geophysical approaches are introduced for: past and present plate motions, seismology and interior of the Earth, gravity and isostasy, heat and mantle dynamics. Ocean ridges, hydrothermal vents, transform faults, oceanic core complex, ocean trenches and subduction zones, accretionary and erosion wedges, rift and rift margins, convergence and collisions, sedimentary basins.

Prerequisite: Permission of CMNS-Geology department.

Recommended: GEOL120 or GEOL100; and MATH141.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL655 or GEOL789E.

Formerly: GEOL789E.

GEOL656 Engineering and Environmental Geology (3 Credits)

An overview of mechanical aspects of earthquakes as a result of fault instability. Quantitative approaches on soil and rock strength, instability on earthquakes, landslides, land subsidence, and geotechnical aspects of oil/gas exploration are discussed. Emphasis is on theoretical framework of mechanics of earthquake and faulting, earthquake source mechanisms, earthquake scaling relations, the seismic cycle etc.

Prerequisite: GEOL100, GEOL110, MATH141, and PHYS141; or permission of instructor.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL656 or GEOL789Z.

Formerly: GEOL789Z.

GEOL657 Seismic Wave Propagation (3 Credits)

A description of the physics of seismic wave propagation and their applications to the determination of the structure of the Earth and the mechanics of earthquakes.

Prerequisite: MATH140 and MATH141; and (PHYS141, PHYS161, or PHYS171); and permission of CMNS-Geology department.

Recommended: GEOL100 or GEOL120; and (MATH241 and MATH246); and (PHYS260 or PHYS273).

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL657 or GEOL789A.

Formerly: GEOL789A.

GEOL670 Physical Oceanography (3 Credits)

Ocean observations. Water masses, sources of deep water. Mass, heat, and salt transport, geochemical tracers. Western boundary currents, maintenance of the thermocline. Coastal and estuarine processes. Surface waves and tides. Ocean climate.

Prerequisite: Permission of CMNS-Atmospheric & Oceanic Science department; or permission of CMNS-Geology department.

Cross-listed with: AOSC670.

Credit Only Granted for: GEOL670, AOSC670 or AOSC420.

GEOL671 Analytical Methods in Mineralogy (3 Credits)

An intensive study in the operation and application of instrumentation in mineralogical problems. Emphasis on designing and testing methods of analysis for use in the student's research problems in geology.

Prerequisite: CHEM471.

Restriction: Non-degree-seeking students require the permission of the instructor.

GEOL672 Tectonics (3 Credits)

The study of the development of the lithosphere on Earth and other rocky planets and moons. Emphasis on the student led discussion and improvement of scientific writing.

Prerequisite: GEOL341; or permission of CMNS-Geology department.

Restriction: Non-degree-seeking students require the permission of the instructor.

Credit Only Granted for: GEOL672 or GEOL789C.

Formerly: GEOL789C.

GEOL680 Geodynamics (3 Credits)

The mechanics and dynamics of the Earth's interior and their applications to problems of Geophysics. This course considers several rheological descriptions of Earth materials (brittle, elastic, linear and nonlinear fluids, and viscoelastic) and emphasizes analytical solutions to simplified problem.

Prerequisite: Permission of CMNS-Geology department; or (MATH241, MATH462, and GEOL446).

Recommended: Familiarity with MATLAB or MATHEMATICA.

Credit Only Granted for: GEOL680 or GEOL789J.

Formerly: GEOL789J.

GEOL681 Physics of Planetary Interiors and Surfaces (3 Credits)

Formation of planets in the solar system; segregation and core formation in terrestrial planets; formation of early atmosphere; tectonics and volcanism; geochemical and cosmochemical constraints; planetary geomorphology.

Prerequisite: Advanced undergraduate geophysics, astronomy or geochemistry; and GEOL446. Or permission of CMNS-Geology department.

Credit Only Granted for: GEOL681 or GEOL789X.

Formerly: GEOL789X.

GEOL682 Computational Geodynamics (3 Credits)

An introduction to the techniques used to model geodynamics processes. The focus is on understanding and applying techniques, not on proving their worth and programming. Students will learn about Finite Element, Boundary Elements, and Finite Differences methods. We will not explore these topics with the rigor expected by Applied Mathematics but focus instead on practical aspects and their application to geodynamics.

Prerequisite: Permission of CMNS-Geology department; or (MATH462, GEOL680, and MATH240).

Recommended: Familiarity with MATLAB.

Credit Only Granted for: GEOL682 or GEOL789M.

Formerly: GEOL789M.

GEOL683 Cosmochemistry (3 Credits)

Introduction to current theories behind the origin, age and evolution of our solar system. The primary focus will be on the interpretation of petrologic, chemical and isotopic data obtained from meteorites, and planetary materials collected by sample return missions to the Moon and asteroids. Includes in-depth discussion of the mechanisms of formation of the asteroids and planets and the origin of the Moon and Mars. Includes hands-on examination of lunar samples from the Apollo missions as well as various types of meteorites.

Recommended: GEOL650.

Credit Only Granted for: GEOL683 or GEOL789K.

Formerly: GEOL789K.

GEOL688 Geology Colloquium (1 Credit)

Contemporary research topics and issues in geosciences are explored through the weekly Geology departmental colloquium and discussion of its contents.

Restriction: Restricted to graduate students in Geology who have not yet advanced to PhD candidacy. Repeatable for credit with changing content. May not be taken for credit concurrently with GEOL497 or GEOL497H.

Repeatable to: 4 credits.

GEOL690 Geoscience Communications (3 Credits)

Explores the style and logic of scientific writing including abstracts, articles, and proposals, as well as the preparation of clear and concise presentations, in order to enhance the quality of scientific communication and hasten the pace of successful publications.

Credit Only Granted for: GEOL690, GEOL789R, or GEOL789S.

Formerly: GEOL789R and GEOL789S.

GEOL789 Recent Advances in Geology (2-4 Credits)

Recent advances in geology research.

GEOL798 Seminar in Geology (1-3 Credits)

Discussion of special topics in current literature in all phases of geology.

Repeatable to: 9 credits if content differs.

GEOL799 Master's Thesis Research (1-6 Credits)**GEOL898 Pre-Candidacy Research (1-8 Credits)****GEOL899 Doctoral Dissertation Research (1-8 Credits)**

GERM - Germanic Studies

GREK - Greek

GREK411 Modern Greek Literature and History (3 Credits)

Students will study historical and political events in Greece during the 19th and 20th centuries through the viewpoint of the man of letters.

Poetry, prose, plays, and essays reflect national emancipation, social reconstruction, and political struggles. Readings and discussion are in Modern Greek.

Prerequisite: Students must have earned a grade of C- or better in a 300-level Modern Greek course.

Restriction: Permission of instructor.

Credit Only Granted for: GREK311 or GREK411.

Formerly: GREK311.

GREK415 Homer (3 Credits)

Extensive readings in Greek from the Iliad or the Odyssey, with special attention to the features of Homeric style and the relationship between the two epics.

Prerequisite: Permission of ARHU-Classics department.

GREK472 History and Development of the Greek Language (3 Credits)

Mastery of ancient Greek through grammar review, prose composition, and analysis of historical developments in Greek writers' modes of expression.

Restriction: Permission of instructor.

GREK488 Greek Readings (3 Credits)

The reading of one or more selected Greek authors. Reports.

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits if content differs.

Additional Information: Readings are in ancient Greek.

GREK499 Independent Study in Greek Language and Literature (1-3 Credits)

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits if content differs.

GREK603 Greek Tragedy (3 Credits)

The reading of two tragedies of the Athenian tragedians. Detailed discussion of historical background, literary art, thought, and the circumstances and manner of their production. Other tragedies will be read in English.

GREK604 Homer (3 Credits)

The extensive and intensive reading of Homer, with concentration on one of his two epics. Discussion of the language, artistic qualities, and thought of the poems, and of modern views concerning their origin and literary qualities.

GREK606 Greek Historians (3 Credits)

Survey of the Greek historians, concentrating on Herodotus and Thucydides, contrasting the two historians in the areas of subject, methods of research, composition, and achievement.

GREK672 History and Development of the Greek Language (3 Credits)

Mastery of ancient Greek through grammar review, prose composition, and analysis of historical developments in Greek writers' modes of expression.

Restriction: Permission of instructor.

GREK688 Special Topics in Greek Literature (3 Credits)

Repeatable to: 9 credits if content differs.

GREK699 Independent Study in Greek Literature (1-3 Credits)

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits if content differs.

GREK799 Master's Thesis Research (1-6 Credits)

GVPT - Government and Politics

GVPT402 International Law (3 Credits)

A study of the basic character, general principles and specific rules of international law, with emphasis on recent and contemporary trends in the field and its relation to other aspects of international affairs.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; and junior standing or higher.

GVPT404 Political Economy of Foreign Aid (3 Credits)

The world spends hundreds of billions of dollars on foreign aid every year. The effects of this aid spending are controversial. Research supports both pessimistic and optimistic views of foreign aid's effectiveness, with little consensus. Where does aid money go? What are the motivations of aid donors? Is foreign aid effective at achieving its goals? Why or why not? This course is designed to survey the promise and the challenges of foreign aid as a policy tool. The first half of the course will focus on the motivations and goals of foreign aid. We will consider various foreign aid donors, such as countries, institutions, and individuals, to understand the motivations behind and effects of foreign aid. We will create a typology of foreign aid agendas, motivations, and donors. The second half of the course will consider the challenges specific to foreign aid. This includes both technical challenges and political challenges. We will consider the strategies that aid donors and organizations have taken to try to overcome these challenges.

Recommended: GVPT200.

Restriction: Must be in Government & Politics or Government & Politics: International Relations program.

Credit Only Granted for: GVPT409R or GVPT404.

Formerly: GVPT409R.

GVPT406 International Organizations (3 Credits)

A basic introduction to the full range of international organizations that have come into being over the past century and one-half, including those that aspire to be universal or global, those with a geopolitical or regional focus, and those that address specific structural or functional areas of human endeavor or issue areas.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; and junior standing or higher. Or must be in Government & Politics: International Relations program; and junior standing or higher.

GVPT407 International Political Economy (3 Credits)

Introduces the field of international political economy, which analyzes the ways in which economic and political changes produce both economic and political reactions.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; and junior standing or higher.

GVPT409 Seminar in International Relations and World Politics (3 Credits)

Reading, writing, and research on topics in international relations and world politics. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT200.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations); and junior standing or higher.

Repeatable to: 9 credits if content differs.

GVPT410 Politics of Nationalist and Ethnic Conflict (3 Credits)

An examination of the major causes and consequences of ethnic, nationalist, and separatist conflict. The course will focus on both theories of ethnicity and nationalism, as well as theories of conflict related to these issues. The course will also explore empirical trends in ethnic and nationalist politics.

Prerequisite: GVPT200.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations).

Credit Only Granted for: GVPT409M or GVPT410.

Formerly: GVPT409M.

GVPT411 Conflict in the International System (3 Credits)

In this course, we will examine conflict, peace, and conflict resolution in contemporary international politics. We will interrogate what we mean by concepts such as peace, conflict, and violence, the different forms that these phenomena can take, and how we can measure their occurrence. We will discuss theoretical explanations for why individuals and groups have disputes, why these actors choose to use violence (or not) in these disputes, and ways in which violent disputes can be resolved peacefully. We will examine these arguments in a detailed study of conflicts in the Middle East, as well as by evaluating published articles that examine the effectiveness of conflict management strategies such as peacekeeping.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics or Government & Politics: International Relations program.

Credit Only Granted for: GVPT409P or GVPT411.

Formerly: GVPT409P.

GVPT413 Peace, Justice, and Conflict Resolution (3 Credits)

An examination of classic and contemporary perspectives on peace, justice, and conflict resolution after armed conflict. The goal of this course is to expose students to the advantages, risks, and challenges of the most prominent methods of conflict mitigation and resolution, including mediation and arbitration; peacekeeping, peacemaking, and peacebuilding; the protection of civilians, Responsibility to Protect, and humanitarian assistance; elections, democratization, and power-sharing; and transitional reconciliation and justice. We will do this by reading, discussing, and synthesizing classic and cutting-edge Political Science research on these topics.

Recommended: GVPT200.

Restriction: Must be in Government & Politics or Government & Politics: International Relations program.

Credit Only Granted for: GVPT409A or GVPT413.

Formerly: GVPT409A.

GVPT414 International Relations of East Asia (3 Credits)

An examination of international relations in East Asia, focusing mostly on Northeast Asia. The course will provide some background on the evolution of international politics in the region over the past several decades, and will examine several contemporary issues—including the North Korean nuclear issue, the relationship across the Taiwan Strait, and maritime disputes in the East and South China Seas—in depth.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics or Government & Politics: International Relations program.

Credit Only Granted for: GVPT409E or GVPT414.

Formerly: GVPT409E.

GVPT417 Seminar in Advanced Topics in Environmental Policy Analysis (3 Credits)

A series of critical tools and methods used to analyze environmental policy. This class should be of interest to students who are either considering a career or graduate studies in environmental protection.

Prerequisite: GVPT273.

Restriction: Must be in one of the following programs (Government & Politics; Environmental Sci&Policy-Env Politics & Policy).

Credit Only Granted for: GVPT419B or GVPT417.

Formerly: GVPT419B.

GVPT419 Seminar in Public Policy (3 Credits)

Reading, writing, and research on topics in public policy. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT241 and GVPT170.

Recommended: GVPT270.

Restriction: Must be in Government & Politics program.

Repeatable to: 6 credits if content differs.

GVPT420 The Logic and Practice of Measuring Political Behavior (3 Credits)

Introduction to concepts and practices used for measuring political behavior. Political analysis is an increasingly quantitative field. It is crucial for students of political behavior to learn how to define concepts in concrete ways, examine different methods of measuring concepts, learn how to test the quality of chosen measures, learn how to construct richer measures out of multiple questions, and finally how to examine the relationship between multiple measures of similar concepts. Common pitfalls, errors, bias, and ethics will be examined along the way.

Prerequisite: GVPT201.

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

GVPT421 Advanced Quantitative Methods (3 Credits)

Advanced quantitative methods for political science research.

Prerequisite: GVPT201.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations).

GVPT422 Quantitative Political Analysis (3 Credits)

Introduction to quantitative methods of data analysis, including selected statistical methods, block analysis, content analysis, and scale construction.

Prerequisite: GVPT241 and GVPT170.

Recommended: GVPT220.

Restriction: Must be in Government & Politics program.

GVPT423 Elections and Electoral Behavior (3 Credits)

An examination of various topics relating to elections; the focus includes the legal structure under which elections are conducted, the selection and nomination process, the conduct of election campaigns, and patterns of political participation and voting choice in different types of elections.

Prerequisite: GVPT241 and GVPT170.

Restriction: Must be in Government & Politics program.

GVPT424 Quantitative Study of International Relations (3 Credits)

A comprehensive introduction to the quantitative study of international conflict. Students will perform statistical analysis of international conflict data using the R software platform.

Prerequisite: GVPT201.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations).

Credit Only Granted for: GVPT409H (Fall 2015 and Fall 2016) or GVPT424.

Formerly: GVPT409H (Fall 2015 and Fall 2016).

GVPT428 Topics in Formal Theories of Political Behavior and Politics (3 Credits)

An evaluation of theories of political behavior such as game, social choice and voting theory, and their applications to problems of distribution and social justice, community organizing, responsive public policy, institutional design, and alliance and coalition formation.

Prerequisite: GVPT241 and GVPT221.

Restriction: Must be in Government & Politics program.

Repeatable to: 6 credits if content differs.

GVPT429 Problems in Political Behavior (3 Credits)

The problem approach to political behavior with emphasis on theoretical and empirical studies on selected aspects of the political process.

Prerequisite: GVPT241.

Recommended: GVPT220.

Restriction: Must be in Government & Politics program.

GVPT431 Introduction to Constitutional Law (3 Credits)

A systematic inquiry into the general principles of the American constitutional system, with special reference to the role of the judiciary in the interpretation and enforcement of the federal constitution.

Prerequisite: GVPT170 and GVPT331.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations); and junior standing or higher.

GVPT432 Civil Rights and the Constitution (3 Credits)

A study of civil rights in the American constitutional context, emphasizing freedom of religion, freedom of expression, minority discrimination, and the rights of defendants.

Prerequisite: GVPT170 and GVPT331.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations).

GVPT439 Seminar in Public Law (3 Credits)

Reading, writing, and research on topics in public law. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT241 and GVPT170.

Recommended: GVPT331.

Restriction: Must be in Government & Politics program; and junior standing or higher.

Repeatable to: 6 credits if content differs.

GVPT442 History of Political Theory--Medieval to Recent (3 Credits)

A survey of the principal theories set forth in the works of writers from Machiavelli to Nietzsche.

Prerequisite: GVPT241.

Restriction: Must be in Government & Politics program.

GVPT443 Contemporary Political Theory (3 Credits)

A survey of the principal political theories and ideologies set forth in the works of writers from Karl Marx to the present.

Prerequisite: GVPT241.

Restriction: Must be in Government & Politics program.

GVPT445 Marxism and Postmarxism (3 Credits)

The study of Marxist thought and an assessment of the critical transformations and reassessments of the theory and practice of Marxism.

Restriction: Must be in a major within BSOS-Government & Politics department.

GVPT448 Non-Western Political Thought (3 Credits)

Examination of works by major authors and general themes of political thought originating in Asia, the Middle East, and Africa. This is not a survey of all non-Western political thought, but a course to be limited by the professor with each offering.

Prerequisite: GVPT241.

Restriction: Must be in Government & Politics program.

Additional Information: Permission of department required for repeat.

GVPT449 Seminar in Political Philosophy (3 Credits)

Reading, writing, and research on topics in political philosophy. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT241.

Restriction: Must be in Government & Politics program.

Repeatable to: 6 credits if content differs.

GVPT454 Seminar in the International Relations of China (3 Credits)

Explores the foreign relations behavior of the People's Republic of China, with focus on the contemporary era.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; and junior standing or higher. Or must be in Government & Politics: International Relations program; and junior standing or higher.

GVPT456 The Politics of Terrorism (3 Credits)

Examination of the definition, causes and organization of terrorist activity, along with key domestic and international counter- and anti-terrorism responses. Special emphasis on challenges and opportunities to the scientific study of terrorism.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

Credit Only Granted for: GVPT456 or GVPT459T.

Formerly: GVPT459T.

GVPT457 American Foreign Relations (3 Credits)

The principles and machinery of the conduct of American foreign relations and an analysis of the major foreign policies of the United States.

Prerequisite: GVPT200.

Restriction: Must be in Government & Politics program; and junior standing or higher.

GVPT458 Special Topics in Study Abroad IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

GVPT459 Seminar in Comparative Politics (3 Credits)

Reading, writing, and research on topics in comparative politics. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT200; and (GVPT282 or GVPT280).

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

Repeatable to: 6 credits if content differs.

GVPT460 State Politics and Government (3 Credits)

A study of the structure, procedures and policies of state governments with special emphasis on intergovernmental relationships, and with illustrations from Maryland governmental arrangements.

Prerequisite: GVPT241 and GVPT170.

Recommended: GVPT260.

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

GVPT461 Local Politics and Government (3 Credits)

An introduction to local government and politics in the U.S. context. The course explores the evolution of local jurisdictions, particularly cities, and the politics of local level decision making.

Prerequisite: GVPT170.

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

Credit Only Granted for: GVPT461 or GVPT479L.

Formerly: GVPT479L.

GVPT473 The U.S. Congress (3 Credits)

A detailed survey of lawmaking and the legislative process, emphasizing the U.S. Congress, and its members.

Prerequisite: GVPT241 and GVPT170.

Restriction: Junior standing or higher. And must be in Government & Politics program; or must be in Government & Politics: International Relations program.

GVPT474 Political Parties (3 Credits)

A descriptive and analytical examination of American political parties, nominations, elections, and political leadership.

Prerequisite: GVPT241 and GVPT170.

Restriction: Must be in Government & Politics program.

GVPT475 The Presidency and the Executive Branch (3 Credits)

An examination of the U.S. presidency in historical and contemporary perspective: nomination and electoral politics and the president's place in policy-making, administration, and public opinion.

Prerequisite: GVPT241 and GVPT170.

Restriction: Must be in Government & Politics program; and junior standing or higher.

GVPT476 The Business Government Relationship (3 Credits)

Examines the structures, process, and outcomes of business and government and the politics and products of their cooperative-adversarial relationships in the United States. The design integrates interest group and administrative politics and the public policy process.

Prerequisite: GVPT241 and GVPT170.

Recommended: GVPT270.

Restriction: Must be in Government & Politics program.

GVPT477 Voting and Participation (3 Credits)

A study of the factors that influence individual vote choice and voter participation in the U.S. The course will introduce political science research pertaining to both topics and will engage current controversies over such things as political campaign laws and the various state and federal rules that govern election administration.

Prerequisite: GVPT170 and GVPT241.

Restriction: Must be in Government & Politics program.

GVPT479 Seminar in American Politics (3 Credits)

Reading, writing, and research on topics in American politics. Both substantive issues and methodological approaches will be considered.

Prerequisite: GVPT241 and GVPT170.

Restriction: Must be in Government & Politics program; and junior standing or higher.

Repeatable to: 6 credits if content differs.

GVPT481 Government and Administration of Russia and the States of the Former Soviet Union (3 Credits)

A comparative study of the governmental systems and political processes of the states of the former Soviet Union.

Prerequisite: GVPT200; and (GVPT282 or GVPT280).

Restriction: Must be in Government & Politics program.

GVPT482 Government and Politics of Latin America (3 Credits)

A comparative study of the governmental systems and political processes of the Latin American countries.

Restriction: Must be in Government & Politics program; or must be in Government & Politics: International Relations program.

GVPT484 Government and Politics of Africa (3 Credits)

A comparative study of the governmental systems and political processes of the African countries, with special emphasis on the problems of nation-building in emergent countries.

Prerequisite: GVPT282 or GVPT280.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations).

GVPT485 Government and Politics of the Middle East (3 Credits)

A comparative study of the governmental systems and political processes of Middle Eastern countries, with special emphasis on the problems of nation-building in emergent countries.

Prerequisite: GVPT200; and (GVPT282 or GVPT280).

Restriction: Must be in Government & Politics program.

Credit Only Granted for: GVPT485 or GVPT459E.

Formerly: GVPT459E.

GVPT487 Government and Politics of China (3 Credits)

Discussion of major issues in the study of the domestic politics of the People's Republic of China.

Restriction: Must be in one of the following programs (Government & Politics; Government & Politics: International Relations); and junior standing or higher.

Credit Only Granted for: GVPT359A or GVPT487.

Formerly: GVPT359A.

GVPT600 Professionalization Seminar in Political Science (1 Credit)

An introduction to the practices, norms, and expectations of professional political science.

Restriction: Must be in Government and Politics (Doctoral) program.

GVPT601 Research Design for Political Analytics (3 Credits)

A graduate-level introduction to empirical research techniques used in political science. The course covers different approaches to answering empirical research questions and addresses the strengths and limitations of different research decisions. Students who successfully complete the course will be able to conceptualize and design an empirical research project, as well as evaluate the research designs used in the research projects conducted by other social scientists.

Restriction: Must be in the Applied Political Analytics Master of Science program; or permission of department.

GVPT604 Introduction to War and Armed Conflict in World Politics (3 Credits)

Examines major theories of both international and civil wars and reviews major empirical studies that test theories of conflict. The topics include the onset of armed conflict, the duration and outcomes of wars, and the durability of peace in the aftermath of wars. The focus is on developing an understanding of central debates in the literature and primary empirical findings from quantitative and cross-national analyses that are of policy relevance.

Recommended: GVPT200.

Restriction: Must be in the MA in International Relations program; or permission of Government and Politics department.

GVPT605 Introduction to Conflict and Cooperation in the World Economy (3 Credits)

This seminar examines major theoretical approaches and empirical studies of international political economy, contemporary dynamics of globalization, the role of domestic politics in the formation of foreign economic policies of states, the dynamics of international trade and investment disputes, and role of international institutions in multi-lateral governance of the world economy. The focus is on developing an understanding of central debates in the literature and primary empirical findings from quantitative and cross-national analyses that are of policy relevance.

Prerequisite: GVPT604.

Restriction: Must be in the International Relations Master's program; or permission of Government and Politics department.

GVPT606 Introduction to International Institutions and International Law (3 Credits)

This seminar examines major theoretical approaches and empirical studies of international law and institutions relating to international political economy and international security. Topics to be covered include the sources of international law and the development of core legal principles in the post-WWII era, the role of international economic institutions such as WTO, IMF, and World Bank in the global economy, and the influence of international institutions such as the UN Security Council, World Court, and International Criminal Court in addressing international security issues. Larger questions about the effectiveness of the WTO, Laws of War, and International Human Rights Law will be considered. The focus is on developing an understanding of central debates in the literature and primary empirical findings from quantitative and cross-national analyses that are of policy relevance.

Prerequisite: GVPT604.

Restriction: Must be in the International Relations Master's program; or permission of Government and Politics department.

GVPT621 Coding in Statistical Software (3 Credits)

Introduction to different statistical software packages used in empirical political research. Instruction to beginner and intermediate programming in STATA and R.

Restriction: Must be in the Applied Political Analytics Master of Science program; or permission of department.

GVPT622 Quantitative Methods For Political Science (3 Credits)

Introduction to quantitative methods of data analysis, with emphasis on statistical methods and computer usage. Measures of association, probability, correlation, linear regression estimation techniques, introductory analysis of variance, and use of package computer programs.

GVPT624 National Security and International Relations (3 Credits)

Introduction to key areas of research in national security and international relations. Students will learn the major approaches to empirical research on national and international security and work with datasets focused on terrorist attacks and civil conflict.

Restriction: Must be in the Applied Political Analytics Master of Science program; or permission of department.

GVPT628 Advanced Topics in Coding for Political Analysis (3 Credits)

Students will explore advanced statistical software relevant to political data analysis. Specific topics may include Python, SQL, and GIS, among others. Provides students with advanced programming and coding skills valuable to employers, and expands abilities beyond R.

Restriction: Must be in Applied Political Analytics (APAN); or permission of department.

Repeatable to: 6 credits if content differs.

GVPT629 Seminar in Research Design (1 Credit)

This is designed to extend and deepen graduate students understanding of research design in empirical political science. Focus is placed on major issues in planning a research project: developing strong theories, formulating clear hypotheses, and crafting strategies to test theories and rule out rival, alternative explanations. Also, issues of effective communication of research will be considered. To get beyond abstractions, examples of research in American politics will be considered and evaluated. Technical issues of statistical analysis or broader epistemological questions in social science will not be covered.

GVPT635 Public Opinion (3 Credits)

Investigate how citizens in a democracy think about politics, form attitudes, and how public opinion shapes and is shaped by the political environment. While being exposed to core debates in public opinion and the study of public opinion, students will use a number of surveys that have been central to advancing our knowledge of public opinion.

Restriction: Must be in the Applied Political Analytics Master of Science program; or permission of department.

GVPT685 Voting, Campaigns, and Elections (3 Credits)

Introduction to the theoretical and empirical research on political participation, campaigns, and elections. By gaining an understanding of the literature and working with a variety of data sets, including surveys and voter history files, students will be equipped to carry out their own research on these topics.

Restriction: Must be in the Applied Political Analytics Master of Science program; or permission of department.

GVPT700 Scope and Method of Political Science (3 Credits)

Required of all Ph.D. candidates. A seminar in the methodologies of political science, and their respective applications to different research fields. Interdisciplinary approaches and bibliographical techniques are also reviewed.

GVPT702 Geographic Information Systems for Social Science Research (3 Credits)

Introduction to the use of Geographic Information Systems for conducting research in the social sciences. Overview of spatially embedded nature of many social science phenomena and content of theories common to spatial thinking. Students will obtain hands-on experience with various GIS tools and methods most frequently employed by social scientists.

Credit Only Granted for: GVPT368I, GVPT702, or GVPT729D.

Formerly: GVPT729D.

GVPT708 Seminar in International Relations Theory (3 Credits)

An examination of the major approaches, concepts, and theories in the study of world politics with special emphasis on contemporary literature.

Repeatable to: 6 credits if content differs.

GVPT715 Applied Evaluation and Analysis of Government Policy (3 Credits)

The public policy approach at both state and federal levels; policy considerations and restrictions; methods of testing and evaluation; collecting and cleaning policy data.

Restriction: Must be in Applied Political Analytics (APAN); or permission of department.

GVPT718 Selected Topics in Political Science (3 Credits)

Selected topics in the field of political science.

Repeatable to: 9 credits if content differs.

GVPT722 Advanced Quantitative Methods For Political Science (3 Credits)

Introduction to multivariate analysis. Elementary matrix algebra, multiple linear and curvilinear correlation and regression, analysis of variance, canonical correlation and regression, discriminant analysis, and several types of factor analysis.

Prerequisite: GVPT622; or permission of instructor.

GVPT728 Advanced Topics in Modeling and Political Analysis (3 Credits)

Introduction to advanced modeling and data techniques that exist beyond linear and logistic regression. Topics may include Time Series modeling, Count modeling, Multinomial Logistic Modeling, and Natural Language Processing, among other methods.

Restriction: Must be in Applied Political Analytics (APAN); or permission of department.

Repeatable to: 6 credits if content differs.

GVPT729 Special Topics in Quantitative Political Analysis (3 Credits)

An intensive examination of special topics in quantitative methods of political analysis in such areas as survey research methods, exploratory data analysis, advanced data management techniques, or advanced methods of policy analysis.

Prerequisite: GVPT622; or permission of instructor.

Repeatable to: 6 credits if content differs.

GVPT742 Modern Political Theory (3 Credits)

The influence of the Enlightenment on political thought, beginning with Machiavelli and ending around the time of Mill and Marx, in which the Enlightenment worked itself out in the hopes and fears of these and other authors.

Recommended: GVPT741.

Restriction: Permission of BSOS-Government & Politics department.

GVPT743 Contemporary Political Theory (3 Credits)

Theorists from Nietzsche (1884-1900) to the present will be covered with a focus on the apparent failure of the Enlightenment to usher in an age of peace and reason.

Restriction: Must have graduate standing.

GVPT761 International Political Economy (3 Credits)

Major issues in international political economy including such matters as the monetary system, trade, debt, and development.

Recommended: GVPT708.

GVPT770 Seminar in American Political Institutions (3 Credits)

This is the core institutions seminar in American politics. The course surveys the primary literature in the field and addresses substantively significant topics related to the study of political institutions in the American context.

GVPT771 Seminar in American Political Behavior (3 Credits)

This is the core seminar in American political behavior. The course will deal with prominent theoretical and empirical issues in the areas of voting, public opinion, political participation and other aspects of political behavior in the American context.

GVPT780 Seminar in the Comparative Study of Politics (3 Credits)

An examination of the salient approaches to and conceptual frameworks for the comparative study of politics, followed by the construction of models and typologies of political systems.

GVPT799 Master's Thesis Research (1-6 Credits)**GVPT803 Seminar in International Political Organization (3 Credits)**

An overview and critical analysis of contemporary theory on international organizations and global governance.

Restriction: Must be in Government and Politics PhD program.

GVPT808 Selected Topics in Functional Problems in International Relations (3 Credits)

An examination of the major substantive issues in contemporary international relations.

GVPT828 Selected Problems in Political Behavior (3 Credits)

Individual reading and research reports on selected problems in the study of political behavior.

GVPT831 Formal Theories of Politics I (3 Credits)

Survey of major formal theories of politics, with emphasis on those theories based on the assumptions of rationality. The theory of public goods, game theory, coalition theory, and the theoretical properties of voting systems.

GVPT838 Topics in Formal Political Theory (3 Credits)

An examination of selected topics in formal theory.

Prerequisite: GVPT831; or permission of instructor.

GVPT848 Current Problems in Political Theory (3 Credits)

Intensive examination of the development of political theory since the Second World War.

Prerequisite: GVPT443.

GVPT849 Readings in Government and Politics (3 Credits)

Guided readings and discussions on selected topics in political science.

GVPT859 Selected Topics in Public Policy (3 Credits)

An examination of selected topics in public policy, such as judicial education, health, welfare, and resources policy.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

GVPT868 Problems of State and Local Government (3 Credits)

Report of topics assigned for individual study in the field of state local government throughout the United States.

GVPT869 Seminar in Urban Administration (3 Credits)

Selected topics are examined by the team research method with students responsible for planning, field investigation, and report writing.

GVPT870 Interest Groups Politics in the United States (3 Credits)

The theory and practice of interest group politics in the United States.

Recommended: GVPT770.

GVPT873 Seminar in Legislatures and Legislation (3 Credits)

Reports on topics assigned for individual study and reading about the composition and organization of legislatures and about the legislative process.

GVPT874 Seminar in Political Parties and Politics (3 Credits)

Reports on topics assigned for individual study and reading in the fields of political organization and action.

GVPT877 The Politics of the Presidency (3 Credits)

The major research topics and issues pertaining to the United States presidency.

Recommended: GVPT770.

GVPT878 Problems in American Government and Politics (3 Credits)

An examination of contemporary problems in various fields of government and politics in the United States, with reports on topics assigned for individual study.

GVPT879 Topics on International Security (3 Credits)

A detailed and advanced analysis of particular regional problems on defense policy and arms control.

Recommended: GVPT876.

Repeatable to: 6 credits if content differs.

GVPT884 Field Methods in Comparative Politics (3 Credits)

A practical designed for graduate students interested in field research. Research design, case selection, developing surveys and experiments, analysis of original data, and some qualitative methods will be emphasized, with the aim that students develop the practical skills to conduct their own field research.

GVPT887 Seminar in the Politics of Developing Nations (3 Credits)

An examination of the programs of political development in the emerging nations with special references to the newly independent nations of Asia and Africa, and the less developed countries of Latin America. Individual reporting as assigned.

GVPT888 Selected Topics in Comparative Governmental Institutions (3 Credits)

An examination of special topics in comparative politics.

GVPT889 Selected Topics in Area Problems in International Relations (3 Credits)

Special topics concerning regional problems in the relations of states.

GVPT898 Pre-Candidacy Research (1-8 Credits)

Guided readings and discussions on selected topics in political science.

GVPT899 Doctoral Dissertation Research (1-8 Credits)

HACS - ACES-Cybersecurity

HACS402 Applied Security Analysis and Visualization (3 Credits)

Focuses on exploratory and statistical data analysis, data and information visualization, and the presentation and communication of analysis results. These topics will be presented and explored in the context of and with applications to cybersecurity related data.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408 Advanced Seminar in Cybersecurity (3 Credits)

Explores various lenses of cybersecurity in order to promote an interdisciplinary understanding of the field. Although each section may focus on a different topic, each integrates active student engagement, communication, critical communication, critical thinking, and teamwork.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

Repeatable to: 9 credits if content differs.

HACS408C Interpersonal Cyber Communications (3 Credits)

Designed to prepare students to participate in culturally responsible and environmentally appropriate communication in the workforce. Students will explore the industry standards for writing technical reports, as well as the variances between persuasive, team, written, and oral communication styles.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408L Analytical and Forensic Techniques for Cybersecurity (3 Credits)

Explores forensic artifacts contained in digital devices, security mechanisms available to protect digital devices and mechanisms available to cybersecurity professionals for analysis of digital devices. Topics include file structure and recovery of IoT and cell phone forensic data, network data capture and analysis, enterprise mobile device management analysis and forensic investigation of digital devices (IoT, telematics systems, etc.) that interact with cell phone and other devices. Incident response, timeline analysis, and detection and analysis of artifacts will be explored in a hands-on and lab-centric course using a variety of open-source tools and commercial cloud services.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408M Introduction to Cyber Threats and Risk Management (3 Credits)

Provides an exploration of cyber risk management and present-day cyber threats, their impacts, and their mitigations. Students will take a multi-disciplinary approach to understanding threats and risks including the technical, policy, and social aspects. This course is guided by real-world cyber threats and examples.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408O Internet of Things Security (3 Credits)

This increasingly interconnected world brings a need for understanding cybersecurity challenges associated with embedded devices and systems. This course will expose students to topics in Internet of Things (IoT) and Cyber Physical System (CPS) device types, IoT/CPS threat categories, security services, distributed networking, activity privacy, and intrusion detection for embedded environments. In addition to individual homework assignments, students will participate in a semester long group project involving research, design, and implementation.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408T Penetration Testing (3 Credits)

A hands-on, technically rigorous experience that prepares students for real-world work in penetration testing and offensive security. This course will allow students to gain proficiency and become comfortable using the tools, techniques, and methodologies that represent the state of the art in penetration testing today. Students should be comfortable on the command line, and a technical exposure to networking and basic proficiency in some scripting language (Bash, Ruby, or Python) is expected.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS408V Data Analysis and Visualization for Cybersecurity (3 Credits)

Focuses on exploratory and statistical data analysis, data and information visualization, and the presentation and communication of analysis results. These topics will be presented and explored in the context of and with applications to cyber security related data. Examples and illustrations will often involve the R programming language, but prior experience with R is not required and submitted work may involve the use of other languages and tools at times.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program.

HACS479 Undergraduate Research in Cybersecurity (1-3 Credits)

The Advanced Cybersecurity Experience for Students (ACES) program encourages its students to engage in research in order to gain greater insight into a specific area within cybersecurity, obtain an appreciation for the subtleties and difficulties associated with the production of knowledge and fundamental new applications, and to prepare for graduate school and the workforce.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program; and permission of UGST-HCOL-ACES Cybersecurity Program.

Repeatable to: 6 credits if content differs.

HACS487 Undergraduate Research in Cybersecurity (3 Credits)

A semester-long, individualized academic research project. Students work with a faculty supervisor to design and research an original topic. Students engage in research to gain greater insight into a specific area within cybersecurity, obtain an appreciation for the subtleties and difficulties associated with the production of knowledge and fundamental new applications, and prepare for graduate school and/or the workforce.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program; and permission of UGST-HCOL-ACES Cybersecurity Program.

HACS497 Cybersecurity Experience Reflection (3 Credits)

Cybersecurity experience is defined as an experiential learning activity either with a University of Maryland entity or with an external organization that will provide valuable, hands-on experience to supplement the knowledge learned in other ACES coursework. This course is intended to help students reflect on their cybersecurity experience and to learn from others' cybersecurity experiences. It is also intended to help students gain professional skills that will aid in their future career.

Prerequisite: Students may enroll concurrently with or after completing a cybersecurity related internship experience of at least 135 hours.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program; and must not have taken HACS297.

Credit Only Granted for: HACS297 or HACS497.

HACS498 Cybersecurity Group Problem Solving (3 Credits)

The Advanced Cybersecurity Experience for Students (ACES) program encourages its students to engage in team problem solving activities in order to gain greater insight into a specific area within cybersecurity and to obtain an appreciation for the subtleties and difficulties associated with these activities in order to prepare students for graduate school and the workforce. Students engage in a semester long problem solving or development project under the mentorship of a industry specialist and with the guidance of university faculty. Through the exercise the students will develop teamwork experience and professional communication skills in addition to experience of the project itself. The project might be evaluation, creation, testing or analysis of some area of cybersecurity as needed by the mentor-sponsor. A contract of what will be accomplished is required must be agreed upon by the mentor, the student and the ACES leadership before the project can begin.

Restriction: Must be a student in the ACES (Advanced Cybersecurity Experience for Students) Minor Program; and permission of UGST-HCOL-ACES Cybersecurity Program.

Repeatable to: 6 credits.

HEBR - Hebrew

HEBR430 Critical Issues in Israeli Cinema (3 Credits)

Critical investigation of Zionist and Israeli culture and politics through film.

Cross-listed with: CINE430.

Credit Only Granted for: HEBR430, CINE430 or FILM430.

Formerly: FILM430.

HEBR498 Special Topics in Hebrew (3 Credits)

Repeatable to: 6 credits if content differs.

HEBR499 Independent Study in Hebrew (1-3 Credits)

Independent study under faculty supervision.

Prerequisite: Permission of instructor.

Repeatable to: 6 credits if content differs.

HESI - Higher Ed, Student Affairs, and International Ed Policy

HESI418 Special Topics in Leadership (3 Credits)

The special topics and leadership course will address a single topic related to leadership through the semester. In-depth study and analysis on the topic will be the basis for the course. Topics include gender and leadership, ethics and leadership, and culture and leadership. Leadership will serve as the foundation in the course.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: HESI418 or EDCP418.

Formerly: EDCP418.

HESI421 Leadership and the Black Community (3 Credits)

Examines leadership from the perspective of the African American experience. Specifically, we will explore the concept and differing meanings of "leader and leadership" within the African-American community in the United States. Issues of leaders and leadership will be examined as influenced by political, cultural, and historic events. The course will place particular emphasis on colleges and universities as a microcosm of the larger society and as a cultural site for exploring and assessing issues of African American leadership.

Credit Only Granted for: HESI418B or HESI421.

Formerly: HESI 418B.

HESI422 Women and Leadership (3 Credits)

The primary goal of this course is for students to develop an understanding of women's leadership and women's ways of influencing organizations. The course will rely heavily on the idea that you must know yourself first before you explore how "you" fit into the organization and how that organization fits into a broader context such as nation, culture, or community. We will talk about the social constructs of leadership and gender, including systems and structures, and the role media, television, movies, and sports play in defining women and their leadership in a cultural context. The exploration of women leaders will be broad based including the role that gender identity and expression, race, sexual orientation, country of origin, and ethnicity/culture play in women's definition and the expression of their leadership.

Credit Only Granted for: HESI418G or HESI422.

Formerly: HESI418G.

HESI423 Leadership and Ethnicity (3 Credits)

Examines the concept of leadership from the standpoint of race, ethnicity, and culture. Specifically, we will explore the concept and differing meanings of leader and leadership within racial/ethnic communities in the United States. Issues of leaders and leadership will be examined as influenced by political, cultural, and historic events. The course will place particular emphasis on colleges and universities as a microcosm of the larger society and as a cultural site for exploring and assessing issues of race, ethnicity, diversity and leadership.

Credit Only Granted for: HESI418D or HESI423.

Formerly: HESI418D.

HESI424 Leadership and the Jewish Community (3 Credits)

Offers students the opportunity to critically examine leadership and leadership identity development in relation to Jewish culture and identity. Explores how Jewish culture and ethnicity influence leadership styles and the role that leadership has played within Jewish history. Students will explore general leadership theories as well as personal leadership identity development in both an overall sense and as a member of the Jewish community. Examines leaders within the Jewish movement and how their leadership has influenced Jewish communities and explores issues facing the Jewish community both on college campuses and in the world and prepare student leaders to act as advocates for the Jewish community.

Credit Only Granted for: HESI418F or HESI424.

Formerly: HESI418F.

HESI470 Introduction to Student Personnel (3 Credits)

A systematic analysis of research and theoretical literature on a variety of major problems in the organization and administration of student personnel services in higher education. Included will be discussion of such topics as the student personnel philosophy in education, counseling services, discipline, housing, student activities, financial aid, health, remedial services, etc.

Restriction: Permission of EDUC-Counseling, Higher Education and Special Education department.

Credit Only Granted for: EDCP470 or HESI470.

Formerly: EDCP470.

HESI489 Field Experiences in Higher Education, Student Affairs, and International Education Poli (1-4 Credits)

Planned field experience in education and community related activities. Credit not to be granted for experiences accrued prior to registration.

Restriction: Permission of EDUC-Counseling, Higher Education and Special Education department.

HESI498 Special Problems in Higher Education, Student Affairs, and International Education Policy (1-3 Credits)

Available only to HESI students who have formal plans for individual study of approved problems.

Prerequisite: Available only to HISA, HIED, and HIEP students who have formal plans for individual study of approved problems.

Restriction: Permission of EDUC-Counseling, Higher Education and Special Education department.

HESI499 Workshops, Clinics, Institutes (1-6 Credits)

The following type of educational enterprise may be scheduled under this course heading: workshops conducted by the Higher Education, Student Affairs, and International Education Policy program (or developed cooperatively with other departments, colleges and universities) and not otherwise covered in the present course listings.

Repeatable to: 6 credits.

HESI655 Organizational Dimensions of Student Affairs (3 Credits)

Exploration of leadership and organizational change of student affairs programs in post-secondary education.

Prerequisite: EDCP610; or permission of EDUC-Counseling, Higher Education and Special Education department.

Credit Only Granted for: EDCP655 or HESI655.

Formerly: EDCP655.

HESI671 Intergroup Dialogue Facilitation Practicum (3 Credits)

Developing knowledge and skills for facilitating intergroup dialogues.

Using the principles and content of intergroup dialogues to create scenarios for the practice of listening, understanding, and taking action under theories of social justice.

Prerequisite: EDCP616 and HESI771; or permission of instructor.

Restriction: Limited to HESI Student Affairs Concentration students only.

Credit Only Granted for: EDCP671 or HESI671.

Formerly: EDCP671.

HESI672 Individual and Organizational Assessment in Student Affairs (3 Credits)

An examination of the scholarship and practice of assessment of college student learning and developmental outcomes as well as organizational practices that contribute to those outcomes.

Credit Only Granted for: EDCP672 or HESI672.

Formerly: EDCP672.

HESI739 Higher Education, Student Affairs, & International Education Policy Study Abroad (1-6 Credits)

An exploration of topics related to higher education, student affairs, & international education policy abroad. Participants engage in tenets associated with University of Maryland Education Abroad programs.

Repeatable to: 9 credits.

HESI771 The College Student (3 Credits)

A demographic study of the characteristics of college students as well as a study of their aspirations, values, and purposes.

Credit Only Granted for: EDCP771 or HESI771.

Formerly: EDCP771.

HESI773 Designing Qualitative Research in Counseling and Student Affairs Contexts (3 Credits)

Introduction to philosophical and epistemological foundations, methodologies and methods associated with qualitative research designs appropriate in student affairs and counseling contexts.

Credit Only Granted for: EDCP773 or HESI773.

Formerly: EDCP773.

HESP - Hearing and Speech Sciences

HESP400 Speech and Language Development in Children (3 Credits)

Analysis of the normal processes of speech and language development in children.

Prerequisite: Minimum grade of C- in HESP300; or permission of BSOS-Hearing & Speech Sciences department.

Recommended: LING200 or HESP120.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP402 Language and Phonological Disorders in Children (3 Credits)

Etiology, assessment and treatment of language and phonological disorders in children.

Prerequisite: Minimum grade of C- in HESP400; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program.

HESP403 Introduction to Phonetic Science (3 Credits)

An introduction to physiological, acoustic and perceptual phonetics; broad and narrow phonetic transcription; current models of speech production and perception.

Prerequisite: Minimum grade of C- in HESP305; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP406 Acquired Neurogenic Communication Disorders in Adults (3 Credits)

Survey of the dysarthrias and aphasia in adults from an interdisciplinary point of view.

Prerequisite: Minimum grade of C- in HESP300 and HESP305; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP407 Bases of Hearing Science (3 Credits)

Fundamentals of hearing, including the physics of sound, anatomy and physiology of peripheral and central auditory nervous system, psychophysical procedures used in measurement of auditory sensation and perception, and topics in psychological acoustics.

Prerequisite: Minimum grade of C- in HESP311; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP411 Introduction to Audiology (3 Credits)

An introduction to the field of audiology. Evaluation and remediation of hearing handicaps.

Prerequisite: Minimum grade of C- in HESP311; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP413 Aural Rehabilitation/Habilitation (3 Credits)

The fundamental aspects of aural rehabilitation therapy for both adults and children are introduced to students. Class time will consist of lectures, discussions, and hands-on activities.

Prerequisite: HESP411.

Restriction: Sophomore standing or higher.

HESP415 Principles and Methods in Speech-Language Pathology (2 Credits)

The principles and methods required to provide treatment of speech and language disorders to children and adults. Topics include writing goals and objectives, programming, teaching strategies, session design, data collection, behavior modification and counseling.

Prerequisite: HESP400.

Restriction: Must be in Hearing and Speech Sciences program.

HESP416 Principles and Methods in Audiology (2 Credits)

Relate previous knowledge of anatomy/physiology and pathologies of the auditory system and integrate this information into clinical application.

Prerequisite: Minimum grade of C- in HESP411.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP417 Principles and Methods in Speech-Language Pathology and Audiology (3 Credits)

The principles underlying the treatment of speech, language and hearing disorders in children and adults.

Prerequisite: HESP400 and HESP411; or permission of BSOS-Hearing & Speech Sciences department.

Restriction: Must be in Hearing and Speech Sciences program; or permission of BSOS-Hearing & Speech Sciences department.

HESP418 Clinical Practice in Speech-Language Pathology and Audiology (3 Credits)

Supervised observation with some direct participation in clinical methods for the treatment of disorders of articulation, fluency, child and adult language; evaluation and habilitation/rehabilitation of hearing impaired children and adults.

Prerequisite: Minimum grade of C- in HESP417.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits.

HESP420 Deaf Culture and ASL for the CSD Professional (3 Credits)

Studying Deaf Culture and American Sign Language (ASL) is crucial in enhancing the culturally competent practice of allied health/Communication Sciences and Disorders (CSD) professionals. This course explores the politics of (dis)ability through the lens of the experience of d/Deafness and the emergence of the Deaf community as a linguistic and cultural group in the United States, as well as issues that impact the provision of services to this population.

Prerequisite: HESP202 and EDSP220.

Credit Only Granted for: HESP498A or HESP420.

Formerly: HESP498A.

HESP422 Neurological Bases of Human Communication (3 Credits)

Basic neurology as it pertains to anatomy and physiology substrates of speech and language.

Prerequisite: HESP305; or permission of instructor.

Credit Only Granted for: HESP498 or HESP422.

HESP458 Global Perspectives in Communication Sciences and Disorders (3 Credits)

Provides students with a supervised and multidisciplinary international service learning (ISL) opportunity for the reciprocal exchange of cultural perspectives, knowledge, and skills. Through interactions with Ghana health and educational professionals as well as patients/clients and their families, students will gain perspective on broader health issues such as determinants of health, health disparities, and the global burden of disease. Students will have learning opportunities in governmental and non-governmental organizations (NGOs) to gain knowledge of and experience with varied healthcare and educational systems in under-resourced communities. In addition to observing and working with Ghana Speech-Language Therapists (SLT) and other rehabilitative professionals, students will assist faculty in the provision of educational workshops for professionals and/or outreach activities for the community.

Prerequisite: HESP202, HESP300, HESP311, and HESP400; and one course from (HESP406, HESP411, or HESP402).

Jointly offered with: HESP659.

Restriction: Must be a major in Hearing and Speech Sciences .

Repeatable to: 6 credits.

Credit Only Granted for: HESP659 or HESP458.

Additional Information: This course will require students to travel out of the country.

HESP468 Professional Development in Research and Academia (1 Credit)

The purpose of this seminar is to complement your honors project with practical advice on how to navigate successful careers in research and academia. As you progress through your undergraduate years (especially if you work in a lab), you will likely make several unofficial observations about life as a graduate student, postdoc, or professor, and overhear conversations that include new terminology that may be confusing (e.g., research mentorship, grants, conference abstract, tenure). This can create a mysterious aura around what it is like to obtain your PhD and work in academia generally. In this class, we will cover tips and skills that are often passed along informally in the lab; but here, we will discuss these issues overtly from a range of perspectives, experiences, and best practices.

Restriction: Must be in the Hearing and Speech Sciences Honors program; or permission of Hearing and Speech Sciences department.

Repeatable to: 3 credits if content differs.

Additional Information: This course would be taken for three semesters.

HESP469 Honor Thesis Research (1-3 Credits)

Student will develop thesis proposal, conduct research, analyze results, develop and defend final written document.

Prerequisite: Permission of honors thesis advisor required.

Repeatable to: 6 credits if content differs.

HESP489 Undergraduate Research Experience (1-3 Credits)

Undergraduate research experience working under HESP faculty or outside affiliates.

Prerequisite: HESP202.

Restriction: Permission of BSOS-Hearing & Speech Sciences department; and sophomore standing or higher.

Repeatable to: 6 credits.

Formerly: HESP388.

HESP498 Seminar (3 Credits)

Selected topics in human communication and its disorders.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits if content differs.

HESP499 Independent Study (1-3 Credits)

A directed study of selected topics pertaining to human communication and its disorders.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits if content differs.

HESP600 Instrumentation in Hearing and Speech Sciences (3 Credits)

Types and principles of operation of electronic equipment used in the hearing and speech sciences.

Restriction: Must be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP601 Foundations of Scientific Inquiry (1 Credit)

Overview of methods of empirical research used in Communication Sciences and Disorders. The course will focus on identifying, critically analyzing, and writing about empirical research.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of Instructor.

Additional Information: Course meets over three semesters for the duration of the Masters of Speech-Language Pathology program.

HESP602 Advanced Seminar in Neurological Bases of Communication (2 Credits)

An advanced discussion of the neural bases of human communication and its disorders, neuroimaging, neural plasticity and neurological evaluations, with emphasis on current developments and critical analysis.

Prerequisite: An undergraduate course in human neuroanatomy.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

HESP603 Seminar in Cultural and Linguistic Diversity in Communication Disorders (1 Credit)

Overview of cultural and linguistic diversity (CLD) in general, and the impact of CLD on communication, communication disorders, and the professional practice of Speech-Language Pathology

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of Instructor.

Additional Information: Course meets over four semesters for the duration of the Masters of Speech-Language Pathology program.

HESP605 Assessment & Intervention in Bilingual Populations (3 Credits)

Integrates foundational knowledge pertaining to bilingualism in speech-language pathology. This course provides students with a framework for working with individuals from culturally and linguistically diverse backgrounds. This course is designed to educate and train student clinicians to serve as bilingual speech-language pathologists.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program.

HESP606 Basic Hearing Measurements (3 Credits)

Theoretical principles, methodology, and interpretation of routine audiometric tests, including pure tone, speech, and acoustic immittance measures. Modification of procedures for special populations. Equipment calibration and mass hearing screening programs.

Prerequisite: HESP411; or students who have taken courses with comparable content may contact the department.

Restriction: Must be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP610 Language Disorders in Adults (2 Credits)

Etiology, diagnosis and management of language problems of adults associated with aging, brain injury and degenerative conditions.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of instructor.

HESP611 Cognitive Disorders in Adults (2 Credits)

Etiology, diagnosis and management of cognitive problems of adults associated with aging, brain injury and degenerative conditions.

Prerequisite: Must have completed or be concurrently enrolled in HESP610; and must have knowledge of basic human neuroanatomy.
Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of instructor.

HESP612 Fluency Disorders (2 Credits)

The nature of fluency disorders. Principles, methods and procedures for the clinical management of fluency disorders in children and adults.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP613 Autism Spectrum Disorders (2 Credits)

Etiology, diagnosis and management of autism spectrum disorders.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of instructor.

Credit Only Granted for: HESP639A or HESP613.

Formerly: HESP639A.

HESP615 Counseling in Communicative Disorders (3 Credits)

Introduction to the application of counseling principles and methodologies for working with individuals with communication disorders and their families. The role of the audiologist and speech language pathologist as counselors will be explored. Class content will focus on theoretical approaches and techniques to counseling from the fields of psychology, social work, and family the family therapy. The application of counseling in the diagnostic process as well as treatment of a wide variety of communication disorders will be highlighted throughout the course.

Recommended: HESP400 and HESP411.

HESP616 Language Disorders in the Pre-school Age (2 Credits)

Theoretical, empirical and clinical perspectives on language disorders in children from infancy through pre-school age.

Prerequisite: HESP400; or students who have taken courses with comparable content may contact the department.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP617 Cultural and Linguistic Diversity in Communication and its Disorders (2 Credits)

An exploration and discussion of cultural and linguistic diversity, its impact on communication and communication disorders, and strategies for assessment and intervention of culturally and linguistically diverse clients

Recommended: HESP417 or equivalent.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)).

HESP620 Speech Production Disorders Across the Lifespan (3 Credits)

Assessment and treatment of phonological, articulatory and resonance disorders arising from various etiologies including developmental conditions, structural abnormalities, and nervous system damage.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; or permission of instructor.

HESP621 Bilingualism in Children and Adults (3 Credits)

Provides an overview of topics related to bilingualism in both pediatric and adult populations, with an emphasis on application in the field of communication disorders. This course explores theories of bilingual language acquisition, typical and atypical bilingual development, cognition in bilinguals, and the neurological underpinnings of bilingualism. This course will provide practicing clinicians with foundational knowledge related to bilingualism in both pediatric and adult populations. Currently there are no existing courses that provide this content with a focus on communication disorders.

HESP622 Neuromotor Disorders of Speech (3 Credits)

Effects of neuropathology on speech production. Classification and assessment of the resultant disorders and their treatment.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP623 Education, Policy & Advocacy in Bilingual Service Delivery (3 Credits)

Bilingual education and associated policy issues in the US as they relate to the field of speech-language pathology. Topics include bilingual education models, disproportionality, and the legal framework related to bilingual service delivery in education settings.

HESP624 Voice Disorders (2 Credits)

Etiological characteristics, assessment and treatment of phonatory disorders in children and adults.

Restriction: Permission of BSOS-Hearing & Speech Sciences department; or must be in Hearing and Speech Sciences: M.A. (Master's) program.

HESP625 Dysphagia (3 Credits)

Nature and clinical management of dysphagia as it pertains to different clinical settings for adult and pediatric populations.

Restriction: Permission of BSOS-Hearing & Speech Sciences department; or must be in Hearing and Speech Sciences: M.A. (Master's) program.

HESP626 Language disorders in school-aged children and adolescents (2 Credits)

Etiology, assessment and treatment of communication and learning problems in school age children and adolescents

HESP627 Augmentative and Alternative Communication (2 Credits)

Principles, methods, and procedures for categorizing, understanding, and developing augmentative and alternative communication.

Recommended: Prior knowledge of Communication and its Disorders is required.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.
Credit Only Granted for: HESP639R or HESP627.

HESP630 Electrophysiological Measurements (3 Credits)

Principles and techniques of physiological and electrophysiological measures of the audio-vestibular mechanisms.

Prerequisite: HESP606.

Restriction: Must be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP632 Medical Audiology (3 Credits)

Overview of auditory pathologies, and their assessment and management in the medical setting.

Prerequisite: HESP311.

Corequisite: HESP606.

HESP634 Anatomy and Physiology of the Auditory and Vestibular Systems (3 Credits)

Comprehensive examination of the anatomy and physiology of the peripheral as well as the central auditory and vestibular systems. Both afferent and efferent pathways will be considered. Applications of basic auditory neuroscience to contemporary clinical audiology practice will be highlighted.

Prerequisite: Must have completed or be concurrently enrolled in HESP311, HESP407, and HESP411; or permission of instructor.

Additional Information: Fills a requirement for the Doctoral Program in Clinical Audiology (CAUD). Open to students in other graduate programs, especially NACS.

HESP635 Aural Rehabilitation/Habilitation (3 Credits)

Principles, methods and procedures for aural rehabilitation/habilitation in children and adults.

HESP636 Geriatric Audiology (3 Credits)

Research findings are presented on the physical effects of aging on the auditory periphery and central nervous system, as well as the consequences of aging on behavioral and electrophysiologic measures of auditory function. Clinical implications in the effects of physiologic and cognitive aging on auditory performance will be discussed.

Prerequisite: HESP606 and HESP700.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)).

HESP638 Research Practicum (1-3 Credits)

Analysis, synthesis and integration of knowledge related to current research or clinical issues in human communication and its related disorders.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.
Repeatable to: 6 credits if content differs.

HESP639 Special Topics in Hearing and Speech Sciences (1-3 Credits)

Intensive coverage of selected topics of current interest.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.
Repeatable to: 6 credits if content differs.

HESP645 Pediatric Audiology (3 Credits)

Evaluation and treatment of hearing-impaired children.

Prerequisite: HESP606.

Restriction: Must be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP646 Educational Audiology (3 Credits)

Examination of historical and current trends influencing educational programming for hearing-impaired children, communication options for severely and profound hearing-impaired children, and the role of the audiologist in the educational setting.

Prerequisite: HESP606.

Recommended: HESP645.

HESP648 Clinical Practice in Speech (1-3 Credits)

Supervised training in the application of clinical methods in the diagnosis and treatment of speech disorders.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP648A Clinical Practice in Speech: Diagnostic Procedures (1-3 Credits)

Supervised training in the application of clinical methods in the diagnosis of speech disorders.

Restriction: Permission of instructor.

HESP648B Clinical Practice in Speech: Therapeutic Procedures (1-3 Credits)

Supervised training in the application of clinical methods in the treatment of speech disorders.

Prerequisite: HESP648A.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP649 Clinical Practice in Audiology (1-3 Credits)

Supervised training in the application of clinical methods in the diagnosis and treatment of hearing disorders.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP649A Clinical Practice in Audiology: Diagnostic Procedures (1-3 Credits)

Supervised training in the application of clinical methods in the diagnosis of hearing disorders.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP649B Clinical Practice in Audiology - Aural Rehabilitation (1 Credit)

A clinical practicum course with individualized instruction, which focuses on the skills necessary to provide intervention and counseling for a wide range of disorders of the auditory system in patients of varying ages and cultural backgrounds. Each student will be various activities across three semesters (Spring YR2, Summer YR2, and Fall YR3). Students may work individually or in pairs to provide hearing loss intervention, auditory training, hearing loss prevention education, and communication strategy training. The student is expected to prepare for each session with a complete clinical plan, educational materials, and counseling strategies. Students must meet with the Audiologist prior to the aural rehabilitation (AR) session to discuss the plan of care. During the visit, the student will perform hearing loss handicap assessments, lead counseling sessions regarding rehabilitative options, make modifications to existing treatment plans/hearing aids, and educate the patient about their hearing. Following the visit, the student will document the encounter according to clinical protocol and ethical standards using the electronic medical records system. All patient-related information will be handled within a secure computer environment which meets HIPAA regulations for protected health information.

Prerequisite: HESP649A.

HESP658 Special Clinical Topics in Hearing and Speech (1-3 Credits)

Comprehensive coverage of selected topics pertinent to clinical issues. Specific content varies each semester, and may include supervision, clinical ethics, etc.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits if content differs.

HESP659 Global Perspectives in Communication Sciences and Disorders (3 Credits)

Provides students with a supervised and multidisciplinary international service learning (ISL) opportunity for the reciprocal exchange of cultural perspectives, knowledge, and skills. Through interactions with Ghana health and educational professionals as well as patients/clients and their families, students will gain perspective on broader health issues such as determinants of health, health disparities, and the global burden of disease. Students will have learning opportunities in governmental and non-governmental organizations (NGOs) to gain knowledge of and experience with varied healthcare and educational systems in under-resourced communities. In addition to observing and working with Ghana Speech-Language Therapists (SLT) and other rehabilitative professionals, students will assist faculty in the provision of educational workshops for professionals and/or outreach activities for the community.

Recommended: HESP702, three semesters of HESP648B, one semester HESP648A.

Jointly offered with: HESP458.

Restriction: Must be in the M.A. program in Speech Language Pathology or Au.D. program in Audiology.

Repeatable to: 6 credits.

Credit Only Granted for: HESP659 or HESP458.

Additional Information: This course will require students to travel out of the country.

HESP700 Hearing Aids (3 Credits)

Principles, methods and procedures for selection, fitting, calibration and management of amplification systems for hearing-impaired children and adults.

HESP701 Hearing Aids II (3 Credits)

Advanced issues in amplification technology, prescriptive hearing aid selection, and management of amplification systems for special populations.

Prerequisite: HESP700.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP702 Diagnostic Procedures in Speech-Language Pathology (2 Credits)

Diagnostic tools and methods in the analysis of speech-language disorders in children and adults.

Restriction: Must be in Hearing and Speech Sciences: M.A. (Master's) program; and permission of BSOS-Hearing & Speech Sciences department. Or permission of instructor.

HESP704 Audiology Practice Management (3 Credits)

Basics of clinical business management both in the context of private practice in Audiology and as a department in a healthcare corporation.

Prerequisite: HESP606, HESP706, HESP700, and HESP701; or permission of instructor.

HESP706 Advanced Clinical Audiology (3 Credits)

Advanced clinical and experimental methods of evaluating the peripheral and central auditory system using acoustic stimuli. Procedural considerations and interpretation of test results.

Prerequisite: HESP606; or students who have taken courses with comparable content may contact the department.

HESP708 Independent Study (1-6 Credits)

Individual research projects under guidance of a faculty member.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP710 Industrial and Environmental Noise Problems (3 Credits)

Evaluation and control of noise hazards. Effects of noise on man. Medico-legal aspects of noise-induced hearing impairment.

Restriction: Permission of instructor.

HESP712 Cochlear Implants and Other Implantable Technologies (3 Credits)

Comprehensive presentation of cochlear implant design and processing, medical/surgical aspects, evaluation, programming, outcomes in children and adults, and post stimulation care. The role of the audiologist as a member of the cochlear implant team will be emphasized. Current and emerging trends in other implantable technologies also will be covered.

Prerequisite: Must have completed or be concurrently enrolled in HESP700, HESP701, and HESP722; or permission of instructor.

HESP722 Psychoacoustics (3 Credits)

Auditory perception and auditory processing in normal and impaired hearing.

HESP724 Research Design (3 Credits)

Evaluations of research designs, critique of published articles and student involvement in designing experiments on assigned topics.

Prerequisite: Must have completed a course in basic statistics.

HESP728 Advanced Clinical Practice in Speech (1-8 Credits)

Clinical internship in selected off-campus facilities.

Prerequisite: HESP648.

Restriction: Permission of instructor.

Repeatable to: 8 credits.

HESP729 Advanced Clinical Practice in Audiology (1-8 Credits)

Clinical internship in selected off-campus facilities.

Prerequisite: HESP649.

Restriction: Permission of instructor.

Repeatable to: 8 credits.

HESP730 Vestibular-ocular Assessment and Management (Electrophysiologic Measures II) (3 Credits)

Advanced principles and methods of evaluating vestibular-ocular function using electrophysiologic measures. Includes rehabilitative issues pertaining to balance disorders and advanced electrophysiologic measures of auditory system function.

Prerequisite: HESP630.

HESP731 Seminar in Clinical Supervision (1 Credit)

Supervising students and employees can be a daunting task. Fostering the next generation of doctors of audiology and support staff requires a unique set of knowledge and skills. This course is designed to explore the theoretical concepts in the supervisory paradigm as well as real-world scenarios. Supervision is not a "one-size fits-all" process, therefore the intricacies and strategies of the supervisor-supervisee relationship must be carefully considered.

Prerequisite: In at least the third year in AuD program.

HESP732 Hearing Aids Lab (1 Credit)

Laboratory experience covering clinical procedures of concepts addressed in concurrent academic course, Hearing Aids 1 (HESP700). This laboratory is 1-credit and graded separately from HESP700. Students will be given the opportunity for hands-on practice in the use of amplification devices for the treatment of hearing impairment. As the first lab in the course series, students will be able to describe and apply current best practices required for amplification-based aural (re)habilitation for patients across the lifespan including those that may differ from them in race, ethnicity, gender identity, sexual orientation, and socioeconomic background.

Corequisite: HESP700.

HESP733 Hearing Aids II Lab (1 Credit)

Laboratory experience covering clinical procedures addressed in concurrent academic course, Hearing Aids 2 (HESP701). This laboratory is 1-credit and graded separately from HESP701. Students will be given the opportunity for hands-on practice in the use of amplification devices for the treatment of hearing impairment. As the second lab in the course series, students will be able to perform the assessment, selection, fitting, verification, validation, adjustment, modification, counselling, and troubleshooting activities required for amplification-based aural (re)habilitation independently.

Prerequisite: HESP700 and HESP732.

Corequisite: HESP701.

HESP734 Basic Hearing Measurement Laboratory (1 Credit)

Supplemental lab experience that coincides with HESP606: Basic Hearing Measurement. Students will complete hands-on learning activities to reinforce theoretical concepts from the didactic learning in HESP606. The goal of this lab is to facilitate the transfer of learning from the classroom to clinical practicum.

Prerequisite: HESP416.

Corequisite: HESP606.

HESP735 Hearing, Aging, and Public Health (3 Credits)

Public health promotes and protects the health of all people and their communities. This course introduces public health concepts and demonstrates how they might be applied or are integral to the practice of Audiology when interacting with older adults. Topics discussed include foundational aspects of epidemiology, aging, chronic conditions common with age and association with hearing, social determinants and accessibility, and health care utilization and policy. Students will be challenged to consider a focus on hearing as it relates to broader and interdisciplinary health services and how this consideration may be incorporated into their clinical practice and experiences. This course is designed for CAUD students who have at least some clinical experience to provide perspective to the topics discussed.

Prerequisite: HESP606.

Credit Only Granted for: HESP735 or HESP636.

HESP788 Graduate Research Externship (1-3 Credits)

Off-campus research internship with departmental affiliates at National Institutes of Health and other regional universities. Contact department chairman for available placements, requirements and openings.

Recommended: HESP724.

HESP799 Master's Thesis Research (1-6 Credits)**HESP808 Current Research in Hearing, Speech and Language Services (1-3 Credits)**

Current research in speech, language and hearing sciences and disorders.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits if content differs.

HESP818 Seminar in Language Processing (3 Credits)

Information processing models of language, relationships among language, memory and cognition.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP828 Seminar in Hearing Science (3 Credits)

Recent developments in auditory psychophysics, and/or anatomy and physiology of the peripheral and central auditory mechanisms.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 6 credits if content differs.

HESP829 Clinical Internship Residency (1-9 Credits)

Off-Campus, full-time (30-40 hours/week) clinical externship in Audiology at regional and national institutions.

Prerequisite: Must have completed HESP729 for two semesters; and must have completed the comprehensive exams successfully.

Restriction: Permission of BSOS-Hearing & Speech Sciences department.

Repeatable to: 18 credits if content differs.

HESP838 Seminar in Language Acquisition (3 Credits)

Models of normal and disordered first language acquisition, second language acquisition and bilingualism.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP848 Seminar in Audiology (3 Credits)

Research topics related to hearing assessment, amplification, and audiologic rehabilitation.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP849 Capstone Research Project I (2 Credits)

First of two-course sequence leading to the final research requirement for the Doctor of Audiology (Au.D.) degree; involves individual study and/or supervised lab work with mentor, preparation of research proposal (including IRB protocol if required), and attendance at Capstone Research Project Workshop.

Prerequisite: HESP724.

Restriction: Must not be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program.

HESP858 Seminar in Speech Pathology (3 Credits)

Problems in disordered articulation, voice, fluency and dysphagia.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP859 Capstone Research Project II (1-4 Credits)

Second of two-course sequence leading to the final research requirement for the Doctor of Audiology (Au.D.) degree; involves final data collection, analysis and presentation of results or completion of scholarly paper under the direction of the faculty mentor.

Prerequisite: Must have completed or be concurrently enrolled in HESP849.

Restriction: Must be in Clinical Audiology: Au.D. or Ph.D. (Doctoral) program.

Repeatable to: 6 credits if content differs.

HESP868 Seminar in Speech Science (3 Credits)

Problems in speech acoustics and physiology.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP878 Seminar in Language Disorders (3 Credits)

Congenital and acquired language disorders of children and adults.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HESP879 Academic Research Seminar (1 Credit)

An overview of issues relevant to the research process will be provided. Topics rotate on a semester basis and include ethics, grantsmanship, professional presentations, research publications, and peer review of journal articles. A formal product (e.g., poster presentation, platform presentation, peer review, IRB application) will be required each semester.

Restriction: Must be in Hearing and Speech Sciences: Ph.D. (Doctoral) program.

Repeatable to: 3 credits if content differs.

HESP887 Academic Research Seminar (2 Credits)

This course has a focused, rotating set of topics each semester to cover professional and academic issues, including ethics, grantsmanship, professional presentations, professional publications, and peer review of journal articles.

Prerequisite: HESP724.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral)).

HESP888 Seminar in Neurological Bases of Language (3 Credits)

Neural substrates of language function, brain image of normal and disordered language function, and neural plasticity for language.

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral); Hearing and Speech Sciences: M.A. (Master's)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP889 Doctoral Candidacy Research (1-3 Credits)

Doctoral candidacy paper research

Restriction: Must be in one of the following programs (Hearing and Speech Sciences: Ph.D. (Doctoral); Clinical Audiology: Au.D. or Ph.D. (Doctoral)); and permission of instructor.

Repeatable to: 6 credits if content differs.

HESP898 Pre-Candidacy Research (1-8 Credits)**HESP899 Doctoral Dissertation Research (1-8 Credits)**

HISP - Historic Preservation

HISP600 History, Theory, and Practice of Historic Preservation (3 Credits)

An introduction to history, theory and practice of historic preservation covered through readings, discussions, presentations, class projects, and field trips.

Prerequisite: Permission of ARCH-Historic Preservation Program.

HISP611 Historical Research Methods (3 Credits)

Research methods used by professional historic preservationists to identify and record historic structures and sites. Emphasizes inter/multidisciplinary nature of contemporary preservation practice using archival and ethnographic evidence as a basis for establishing significance.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP610 or HISP611.

HISP615 The Everyday and the "American" Environment (3 Credits)

An introduction into the theories of the everyday with the context of the American built environment. The course focuses primarily on the American experience of underrepresented, minority, and immigrant communities; both historical and contemporary. The course attempts to challenge what is meant by American in describing the American everyday built environment.

Prerequisite: Permission of ARCH-Historic Preservation Program. Also offered as: HISP200.

Credit Only Granted for: HISP615, HISP619E, or HISP200.

Formerly: HISP619E.

HISP619 Special Topics in Historic Preservation (1-6 Credits)

Technical aspects of preservation taught by practitioners whose expertise are of special benefit to certificate students.

Repeatable to: 12 credits if content differs.

HISP628 Selected Topics in Historic Preservation (3 Credits)

Critical issues in contemporary preservation practice will be examined. Topics will change each year, according to the professor's interests and the relevance of the course topic, and will include such themes as: preservation of the everyday built environment, social and ethnic dimensions of historic preservation practice, and preservation of Modern architecture and landscapes. The course will consist of readings, class, discussions, and a substantial individual research project.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

HISP629 Independent Studies in Historic Preservation (1-3 Credits)

Individual Instruction course.

Restriction: Permission of ARCH-Historic Preservation Program.

HISP630 Preservation Policy and Planning (3 Credits)

An opportunity is provided to look in depth at the national historic preservation program that is the federal, tribal, state, and local (city and county) public sector preservation activities being undertaken in accordance with public policy set by laws, regulations, standards, and guidelines.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP619M or HISP630.

Formerly: HISP619M.

HISP635 Social and Ethnic Issues in Historic Preservation Practice (3 Credits)

This seminar course examines the broader social and ethnic dimensions of historic preservation practice that have impacted the field since the "culture wars" of the 1990's. Through weekly case studies of local, international sites, students will explore these issues and apply newly emerging methodologies to their final case study project.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP628E or HISP635.

Formerly: HISP628E.

HISP640 Historic Preservation Law, Advocacy and Public Policy (3 Credits)

Introduce students to legal, advocacy, and public policy issues in the field of historic preservation. Student activities will be designed to teach basic working knowledge of relevant legal subjects, including historic preservation ordinances, state and federal preservation statutes, and important constitutional issues.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP619C or HISP640.

Formerly: HISP619C.

HISP645 Archaeology and Preservation (3 Credits)

An introduction to issues related to archaeological resources and preservation. Topics will include method and theory in American archaeology, archaeology in support of architectural history, archaeology and the NHPA, archaeological site preservation and conservation, and curation and collections management. Students will have a chance to work at an archaeological site to experience field excavation techniques and challenges, and will visit other archaeological sites and curation facilities in the area.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP619A or HISP645.

Formerly: HISP619A.

HISP650 Historic Preservation Studio Workshop (6 Credits)

Students carry out a group preservation project in a local community, from inception and problem formulation through completion. Guided carefully by a faculty team, students will conduct research, interact with communities, perform analyses, and propose solutions for an issue or problem of direct relevance to a local community and client group.

Prerequisite: HISP600; and permission of ARCH-Historic Preservation Program.

Restriction: Must be in a major in ARCH-Historic Preservation Program.

HISP655 American Vernacular Architecture (4 Credits)

History, theory, and practice of American vernacular architecture including a review of common building technologies, structure, and style, and focusing on methods and approaches for recording, documenting and analyzing these historic resources.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP655 or HISP619V.

Formerly: HISP619V.

HISP660 Internship in Historic Preservation (3 Credits)

Students will secure a summer internship with an organization engaged in historic preservation work (this can be a public agency, nonprofit, or private firm). The students will formulate a plan of work and a series of pedagogical goals to satisfy both the practical needs of the project and the academic requirements for the course.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Formerly: HISP619.

HISP670 Conservation of Historic Places: Historic Materials, Building Systems, and Conservation (3 Credits)

Introduces students to the analysis of historic buildings, building systems and materials. The overall emphasis is on assessing the condition of a building and its parts, and formulating a preservation strategy based on it. Conservation methods will be discussed through the introduction of philosophies and specific techniques.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP619T or HISP670.

Formerly: HISP619T.

HISP678 Fieldwork in Historic Preservation (3 Credits)

Advanced fieldwork in research and documentation of historic sites and structures including primary local history research, building analysis, survey techniques, field photography, and graphic documentation techniques.

Repeatable to: 6 credits if content differs.

HISP679 Introduction to Measured Drawings for Historic Preservation (3 Credits)

Teaches graphic documentation methodologies for historic buildings, including hand measuring, drafting, preparing a sketch plan, analyzing buildings, and producing finished drawings in ink. Students will analyze building in situ.

Repeatable to: 6 credits if content differs.

HISP680 Preservation Economics (3 Credits)

Students are introduced to a range of economic theories, methods, and issues that must be considered in the practice of historic preservation. Case studies related to community economic development, adaptive reuse, tax credit programs, project finance, and land use will be presented.

Prerequisite: Permission of ARCH-Historic Preservation Program.

Credit Only Granted for: HISP619N or HISP680.

Formerly: HISP619N.

HISP690 Historic Preservation Professional Practice (2 Credits)

Students explore management and practice issues in the historic preservation field. Topics include: project management, budgeting, personnel, and grantsmanship. Each topic will be considered in the three main areas of practice - government agencies, non-profits, and for profit companies. Outside speakers from these various practice environments will present on their area of specialization.

Restriction: Permission of instructor.

HISP701 Certificate Portfolio Project (1 Credit)

Students will gather samples of their work and craft a synthetic statement on their experiences in their HISP certificate courses (for example, picking up on themes such as community involvement, diversity of practice, affordable housing, or sustainability), and the ways in which they have integrated historic preservation into their thinking and practice in their home discipline.

Prerequisite: Permission of ARCH-Historic Preservation Program.

HISP710 Final Project in Historic Preservation I (1 Credit)

An independent, applied research project investigating the preservation of a particular site or a specialized issue in historic preservation. This is part one of a two-semester sequence and involves developing the project proposal and bibliography.

Credit Only Granted for: HISP700 or HISP710.

Formerly: HISP700.

HISP711 Final Project in Historic Preservation II (2 Credits)

An independent, applied research project investigating the preservation of a particular site or a specialized issue in historic preservation. This is part two of a two semester sequence and involves project research and writing.

Credit Only Granted for: HISP700 or HISP711.

Formerly: HISP700.

HIST - History

HIST401 Science and Gender (3 Credits)

Examines the role of women and gender in the history of science. Includes consideration of barriers to women's participation in science; women's role as scientific subjects and researchers; and questions about the scientific construction of gender and the gendered construction of science.

Credit Only Granted for: HIST401 or HIST429R.

Formerly: HIST429R.

HIST405 Environmental History (3 Credits)

An introduction to the key issues and methods of environmental history. The scope of the subject is discussed, as well as its relationship with other disciplines, such as ecology, anthropology, and geography. A primary focus is environmental change in history with emphasis on the American experience.

HIST406 History of Technology (3 Credits)

The changing character of technology in modern history, beginning with the Middle Ages. Concentrates on the Industrial Revolution and its aftermath, the nature of technological knowledge and the sources of technological change.

HIST407 Technology and Social Change in History (3 Credits)

Social consequences of technological innovations and the ways in which societies have coped with new technologies.

HIST408 Senior Seminar (3 Credits)

A capstone course for history majors, designed to increase historical knowledge and the ability to analyze texts and arguments. Topics will focus on the literature of a particular field and primary-source research.

Restriction: Must be in History program.

Repeatable to: 6 credits if content differs.

HIST412 History of Women and Gender in Africa (3 Credits)

An examination of socio-economic and cultural change in Africa from the dawn of the colonial era in the 19th century to independence in the mid-twentieth century. Major focus on how African women understood and responded to the expansion of European empires, changes in the colonial economy, and impact of westernization and urbanization.

Credit Only Granted for: HIST412 or HIST428L.

Formerly: HIST428L.

HIST415 Ideas and Politics in Europe Since 1900 (3 Credits)

Examination of intersection of ideas and politics in Europe since 1900. Focus will be on advocates of liberalism, social democracy, fascism, Nazism, communism, and conservatism and their impact on politics and policy since 1900.

HIST416 History of Slavery and the Slave Trade in Africa (3 Credits)

Examines the history and impact of the slave trade on African states, societies, and economies. Investigates the meaning of slavery in Africa, the local uses of slavery there and Africa's connections to the Trans-Saharan, Red Sea, and Trans-Atlantic slave trades.

Credit Only Granted for: HIST416 or HIST419Y.

Formerly: HIST419Y.

HIST417 Colonial Encounters: Natives, Spaniards, and Africans in the New World (3 Credits)

An exploration of the discourses and practices of the Spanish colonial project in the New World and the ways in which Indians and Blacks were incorporated into or excluded from that project. Also examines native and African resistance and adaptation to Spanish rule, and the process of transformation and hybridization of Spanish, native and African cultures in Spanish America. An analysis of recent historiographical developments that have profoundly changed the understanding of the Spanish conquest and colonization of the New World.

Recommended: HIST220 and HIST250.

Credit Only Granted for: HIST417 or HIST428Y.

Formerly: HIST428Y.

HIST418 Jews and Judaism: Selected Historical Topics (3 Credits)

Prerequisite: HIST281, HIST283, HIST106, HIST286, or HIST282; or permission of instructor.

Repeatable to: 6 credits if content differs.

HIST419 Special Topics in History (3 Credits)

Repeatable to: 9 credits if content differs.

HIST419Q Before the Holocaust: The Golden Age of Eastern European Jewry (3 Credits)

An exploration of the history of the Jews of Eastern Europe from the period of the Polish Lithuanian Commonwealth until the Holocaust. Topics to be covered include religious, political, social, and cultural transformation of Jewish life in Eastern Europe in the context of the general political changes in the area.

Cross-listed with: JWST370.

Credit Only Granted for: JWST419E, JWST370, or HIST419Q.

Formerly: JWST419E.

HIST421 Medieval Heresies (3 Credits)

An examination of twelfth- and thirteenth-century heresies in the medieval West. Consideration of why so many heretics emerged, and how the church attempted to deal with them, and what effect their persecution had on Europe both then and later. Special attention given to groups that stood on the fine line between heresy and orthodox religion.

Credit Only Granted for: HIST408L or HIST421.

Formerly: HIST408L.

HIST425 Imperial Russia (3 Credits)

The rise and fall of the Russian Empire, Peter the Great to the collapse of tsarism in revolution. Emphasis on the evolution of autocracy, social groups, national identities, and cultural change.

HIST428 Selected Topics in History (3 Credits)

Repeatable to: 9 credits.

HIST429 Special Topics in History (3 Credits)

Repeatable to: 9 credits.

HIST429X Tradition and Change: Jewish Religion in the Modern World (3 Credits)

An exploration of the history of the different modern Jewish religious movements that developed in Europe, starting with messianic movements and ending with Reform and Orthodoxy. Emphasis will be placed on the influence of the academic study of Judaism on the development of modern Jewish religious ideologies and practices.

Cross-listed with: JWST347, RELS347.

Credit Only Granted for: RELS347, JWST347, HIST429X, or RELS419R.

Formerly: RELS419R.

HIST430 Reformations in Politics, Religion, and Gender: England 1485-1603 (3 Credits)

An examination of the political, religious, and social forces in English life, 1485-1603, with special emphasis on Tudor government, the English reformation, and the Elizabethan era.

HIST431 Becoming Great Britain, 1603-1704 (3 Credits)

An examination of the political, religious, and social forces in English life, 1603-1714, with special emphasis on Puritanism and the English revolutions.

HIST434 Victoria's Secrets: Sex and Class in Nineteenth Century Britain (3 Credits)

Queen Victoria, Jack the Ripper, Sherlock Holmes, Oscar Wilde, and Charles Darwin—all of them were "Victorians" yet just what did that word mean and what values did it encompass? This course will examine the social and cultural life of Great Britain from 1830 to 1900, and encompass the worlds of the elite upper classes to the slums of London's East End. We will pay particular attention to the various meanings of Victorianism and the myths and practices of progress, morality, reform, and imperial conquest that defined the era. We will focus on the "Two Nations" residing within Britain and how government and moral reformers addressed conditions of social inequality, poverty, and crime. Victorian medicine and science and their intersection with empire will be covered. We will also address Victorian notions of class, race, gender, and sexuality and how they were shaped by and influenced the politics and culture of everyday life.

Credit Only Granted for: HIST419A or HIST434.

Formerly: HIST419A.

HIST436 Napoleon, the French Revolution and the World (3 Credits)

An argument for the broad continuity between the revolutionary and Napoleonic wars.

HIST437 Modern France from Napoleon to DeGaulle (3 Credits)

The changing political and cultural values of French society in response to recurrent crises throughout the 19th and 20th centuries. Students should have had some previous survey of either Western civilization or European history.

HIST441 Germany Since 1900 (3 Credits)

Course places Nazism in context of German and European history. Topics include collapse of German democracy and the establishment of the Nazi dictatorship; the role of Hitler; the response of political, military, economic, diplomatic, legal, media, theological elites and the broader population; the mix of terror, consent and coercion; propaganda and Nazi culture; contours of Nazi racial ideology and anti-Semitism and their impact on domestic and foreign racial policy; the economic history of the Nazi regime; foreign policy from rearmament to launching World War II to expansion and defeat; Jewish policy from the years of persecution to those of extermination; Nazi policy in Eastern and Western Europe, towards the United States, and towards North Africa and the Middle East; why the Allies won World War II and why and how Nazi Germany was defeated; the nature of the Allied occupation after 1945; the Nuremberg war crime trials; aftermath of facing and avoiding the crimes of the Nazi regime in West and East Germany.

HIST442 Twentieth-Century Russia (3 Credits)

Russia and the Soviet Union from the fall of the tsars to the post-communist present. Impact of Leninism, Stalinism, and Soviet Communism on state, society, culture, and nationality.

HIST444 America in the 1960s (3 Credits)

Celebrated and vilified, the years between 1960 and 1970 represented a watershed in twentieth-century American history. Although history rarely falls neatly within 10-year divisions, the 1960s - as both historical era and historical idea - witnessed enormous political, social, and cultural changes. This course will examine the seminal events, actors, and movements that continue to shape our nation.

Credit Only Granted for: HIST319V or HIST444.

Formerly: HIST319V.

HIST450 American Capitalism: 1600-1900 (3 Credits)

This course explores the transformation of economic life in what became the United States from pre-colonial times to 1900, with special emphasis on economic interactions among Native American, Mexican, and European societies; how and why capitalism took root and became dominant; economic dimensions of the Revolutionary and Civil Wars; why the North, South, and West followed distinct economic paths; the revolutions in transportation and communications; slavery as a business system; causes and consequences of industrialization; and trends in the distribution of wealth and income.

HIST451 American Capitalism: 1900 to Present (3 Credits)

An examination of the evolution of American capitalism from 1900 to the present, with special attention on the emergence of the United States as the world's leading economic power; the impact of big business on work and government regulation; causes and consequences of the Great Depression; the role of business in the two world wars; postwar growth followed by the decline of U.S. global competitiveness; why consumerism occupied a central role in U.S. history; the influence of economic theory on policymaking; realities and mythologies of Reaganomics and Clintonomics; and the economic impact of the digital revolution.

HIST452 Diplomatic History of the United States to 1914 (3 Credits)

American foreign relations from the American Revolution to the beginning of World War I. International developments and domestic influences that contributed to American expansion in world affairs. Analyses of significant individuals active in American diplomacy and foreign policy.

HIST453 Diplomatic History of the United States from 1914 (3 Credits)

American foreign relations in the 20th century. World War I, the Great Depression, World War II, the Cold War, the Korean War, and Vietnam. A continuation of HIST452.

HIST454 Constitutional History of the United States: From Colonial Origins to 1865 (3 Credits)

The interaction of government, law, and politics in the constitutional system. The nature and purpose of constitutions and constitutionalism; the relationship between the constitution and social forces and influences, the way in which constitutional principles, rules, ideas, and institutions affect events and are in turn affected by events. The origins of American politics and constitutionalism through the Constitutional Convention of 1787. Major constitutional problems such as the origins of judicial review, democratization of government, slavery in the territories, secession, and civil war.

HIST455 Constitutional History of the United States: Since 1865 (3 Credits)

American public law and government, with emphasis on the interaction of government, law, and politics, and the relationship between the constitution and social forces and influences, the way in which constitutional principles, rules, ideas, and institutions affect events and are in turn affected by events. Major crises in American government and politics such as Reconstruction, the rise of corporate power, civil liberties during wartime, the New Deal era, the civil disorders of the 1960s.

HIST459 Society in America: Historical Topics (3 Credits)

A consideration of selected aspects of American society from colonial times to the present. Special emphasis on regionalism, immigration, nativism, minorities, urbanization, and social responses to technological changes.

Repeatable to: 6 credits if content differs.

HIST460 History of Labor in the United States (3 Credits)

The American working class in terms of its composition; its myths and utopias; its social conditions; and its impact on American institutions.

HIST462 Slavery, Sectionalism, and the U.S. Civil War (3 Credits)

Slavery, sectionalism, and the coming of the Civil War. Resources and strategy of the Confederacy and the Union, the war's changing character, emancipation and its consequences, conditions on the home front, and the wartime origins of Reconstruction.

HIST465 Oral History of Immigration (3 Credits)

Uses oral history to explore experiences of migrants to the Washington, D.C. area since the mid-twentieth century in projects based on engagement with local immigrants.

Credit Only Granted for: HIST428M or HIST465.

Formerly: HIST428M.

HIST466 Immigration and Ethnicity in the U.S. (3 Credits)

Seminar exploring historical problems relating to US immigration, race, and ethnicity since 1848, with emphasis on cultural impacts of migration on immigrants, their children, and U.S. society.

Credit Only Granted for: AAST498L or HIST466.

HIST467 Women and Reform Movements in the Twentieth-Century United States (3 Credits)

Investigation of women's participation in such twentieth-century reform movements as the labor movement, the struggle for racial justice, social welfare reform, and women's movements. Will ask how race, class, and gender were implicated in the ways that women agitated for social political change.

Recommended: HIST201, HIST211, or HIST255.

Credit Only Granted for: HIST467 or HIST429E.

Formerly: HIST429E.

HIST469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

HIST470 Corporations on Trial (3 Credits)

Examines legal challenges to corporations around the world over the past 200 years through selected case studies. Topics include globalization, empires, the world wars, and the emergence of human rights, corporate social responsibility, and environmental justice.

Credit Only Granted for: HIST419X or HIST470.

Formerly: HIST419X.

HIST473 History of the Caribbean (3 Credits)

Offers a concise introduction to the history of the Caribbean regions from the Columbian voyages to the 20th century. Special emphasis is given to the dynamics of local social and cultural formations within the framework of the political and economic history of the Atlantic world.

HIST476 Jews in Medieval Times 1000-1450 (3 Credits)

Social and cultural life of Jewish communities spread throughout Islam and Christendom. Major topics include the Gaonate, kehila organizations, legal, rationalist, and mystical thought, and the context of rising animosity against Jews linked to the Crusades and changing Church doctrines.

Recommended: HIST282, HIST330, HIST331, or JWST234.

Cross-listed with: JWST432.

Credit Only Granted for: HIST476 or JWST432.

HIST481 A History of Modern China (3 Credits)

Modern China from 1644 to the People's Republic of China. Emphasis on the coming of the West to China and the various stages of the Chinese reaction.

HIST482 History of Japan to 1800 (3 Credits)

Traditional Japanese civilization from the age of Shinto mythology and introduction of continental learning down to the rule of military families, the transition to a money economy, and the creation of a townsmen's culture. A survey of political, economic, religious, and cultural history.

HIST483 History of Japan Since 1800 (3 Credits)

Japan's renewed contact with the Western world and emergence as a modern state, industrial society, and world power, 1800-1931; and Japan's road to war, occupation, and recovery, 1931 to the present.

HIST484 Cultural History of the Chinese Revolutions (3 Credits)

Examines the cultural origins, experience, and results of the Cultural Revolution in China.

Recommended: HIST481 or HIST285.

Credit Only Granted for: HIST419G or HIST484.

Formerly: HIST419G.

HIST486 Social Issues in Modern China (3 Credits)

Explores the problems surrounding family, community, and social life in modern China, including a focus on issues that affect groups and subcultures within the population. Examines as well the political system's capacity to regulate this complex society.

Recommended: HIST285; and HIST481.

Credit Only Granted for: HIST419N (Fall2007) or HIST486.

Formerly: HIST419N.

HIST490 Seven Revolutions in Modern Africa (1945-) (3 Credits)

Seven Revolutions samples theoretical, contemporaneously produced, and leading scholarly (secondary) texts about seven revolutionary situations faced by Africans from ca. 1952 through to the 21st century. In past years we have devoted weeks or double weeks to the Mau Mau (Kenya), Ethiopian derg, Zimbabwe's factions and structural racism, Guinea and women's subalternity, Patrice Lumumba's assassination, race vs. settler as a framework, Liberia's intersection with continental history in the 1980s, among other focuses.

Credit Only Granted for: HIST428B or HIST490.

Formerly: HIST428B.

HIST491 History of the Ottoman Empire (3 Credits)

Survey of the Ottoman Turkish Empire from 1300 A.D. to its collapse during World War I. Emphasis on the empire's social and political institutions and its expansion into Europe, the Arab East and North Africa.

HIST492 Women and Society in the Middle East (3 Credits)

Examines the customs, values and institutions that have shaped women's experience in the Middle East in the past and in the contemporary Middle East.

Recommended: Prior coursework in Middle East studies or gender studies.

Cross-listed with: WGSS456.

Credit Only Granted for: HIST492, WMST456 or WGSS456.

Formerly: WMST456.

HIST495 Women in Medieval Culture and Society (3 Credits)

Medieval women's identity and cultural roles: the condition, rank and rights of medieval women; their access to power; a study of women's writings and the constraints of social constructs upon the female authorial voice; and contemporary assumptions about women.

Cross-listed with: WGSS455.

Credit Only Granted for: HIST495, WMST455 or WGSS455.

Formerly: WMST455.

HIST499 Independent Study (1-3 Credits)

Restriction: Permission of ARHU-History department.

Repeatable to: 6 credits.

HIST601 History and Contemporary Theory (3 Credits)

An introduction to contemporary theories in philosophy, literary criticism, cultural studies, anthropology, and other fields; and analysis of their usefulness to historians.

HIST607 The Teaching of History in Institutions of Higher Learning (1 Credit)**HIST608 General Seminar (3 Credits)**

General seminar in student's major field of study (e.g., U.S.; Women and Gender; International, World, and Comparative; Science and Technology; Latin America) exploring the concentration's major issues, topics, and literature.

Restriction: Permission of ARHU-History department.

Repeatable to: 9 credits if content differs.

HIST609 Readings in the History of Science and Technology (3 Credits)**HIST610 Introduction to Museum Scholarship (3 Credits)**

Provides students a basic understanding of museums as cultural and intellectual institutions. Topics include the historical development of museums, museums as resources for scholarly study, and the museum exhibition as medium for presentation of scholarship.

Cross-listed with: AMST655, ANTH655, INST653.

Credit Only Granted for: AMST655, ANTH655, HIST610, INST728T or INST653.

HIST618 Readings in Women's and Gender History (3 Credits)**HIST619 Special Topics in History (1-3 Credits)****HIST628 Readings in Colonial American History to 1763 (3 Credits)**

Major historical literature on various groups and developments in the European colonies that later became the United States through the period ending with the British-French "Great War for Empire."

HIST629 Readings in the American Revolution and New Nation, 1763 to 1812 (3 Credits)**HIST638 Special Topics in History (3 Credits)**

Special Topics in History.

Repeatable to: 9 credits if content differs.

HIST639 Special Topics in History (3 Credits)

Special Topics in History.

Repeatable to: 9 credits if content differs.

HIST648 Readings in Early 20th-Century America, 1900-1941 (3 Credits)

Major historical literature on various groups and developments in the United States between the Progressive Era and the beginning of World War II.

HIST649 Readings in Recent American History, 1941-Present (3 Credits)

Key subjects, themes, and historiographic debates in the history of the United States from 1941 to the present.

HIST658 Readings in American Constitutional and Legal History (3 Credits)

Historical literature on the American constitutional order from the colonial foundations to the present. The founding and development of political and constitutional institutions examined from the perspectives of law, politics, government and political philosophy.

HIST659 Readings in American Cultural and Intellectual History (3 Credits)

Major historical literature pertinent to the cultural/intellectual development of the varied peoples of the United States.

HIST668 Readings in American Social History (3 Credits)

Major historical literature related to specific issues in the social history of the United States.

HIST669 Readings in U.S. Economic and Business History (3 Credits)

An overview of U.S. economic and business history and historiography from colonial times to the present. Emphasizes the methodologies of "new" economic historians and institutional business historians, the evolving role of the state in the American economy, and cultural dimensions of economic change.

Repeatable to: 6 credits.

HIST678 Readings in American Labor History (3 Credits)

Major historical literature related to the development of the American working class, the labor movement, and gender/racial/ethnic issue within them.

HIST679 Readings in the History of American Foreign Policy (3 Credits)

Major historical literature related to the diplomacy and international relations of the United States.

HIST688 Special Topics: Collaborative Curation (3 Credits)

This seminar considers the history of curation and curators within the institutional setting of museums and offers participants the opportunity, and challenge, to engage in curatorial practice by planning an exhibition that focuses on a critical aspect of life at and around the University of Maryland over the years.

Prerequisite: AMST655, ANTH655 or HIST610.

Recommended: AMST856, ANTH856, or HIST810; and AMST857, ANTH857 or HIST811.

Cross-listed with: AMST659, ANTH659, INST788.

Restriction: Must have permission of the Museum Studies and Material Culture program.

Repeatable to: 6 credits if content differs.

Additional Information: Students enrolled in the MSMC (Museum Studies and Material Culture) certificate program will be given priority for enrollment.

HIST689 Readings in Southern History (3 Credits)

Major historical literature centered on the development and peoples of the southern United States.

HIST698 Professional Internship (3 Credits)

Internship with a professional organization in the historical disciplines or related fields.

Restriction: Must be in one of the following programs (History (Master's); History (Doctoral)).

Repeatable to: 6 credits if content differs.

HIST708 Directed Independent Reading for Comprehensive Examinations I (1-4 Credits)

Directed reading in preparation for Doctoral Comprehensive Examinations. In consultation with their advisors, students will select a number of books and articles from an approved list. Grading for the course will reflect performance on the written and oral sections of the Comprehensive Examinations.

Restriction: Permission of ARHU-History department.

Repeatable to: 12 credits if content differs.

HIST709 Directed Independent Reading for Comprehensive Examinations II (1-4 Credits)

Directed reading in preparation for Doctoral Comprehensive Examinations. In consultation with their advisors, students will select a number of books and articles from an approved list. Grading for the course will reflect performance on the written and oral sections of the Comprehensive Examinations.

Repeatable to: 12 credits if content differs.

HIST711 Final Project in Historic Preservation II (2 Credits)

An independent, applied research project investigating the preservation of a particular site or a specialized issue in historic preservation. This is part two of a two-semester sequence and involves project research and writing.

Credit Only Granted for: HISP700 or HISP711.

Formerly: HISP700.

HIST718 Readings in Medieval History (3 Credits)**HIST719 Readings in the History of the Renaissance and Reformation (3 Credits)****HIST720 Readings in the History of the Catholic Church (3 Credits)**

This is graduate-level readings seminar in the modern history of the Catholic Church. We will begin with the Reformation and proceed through the present day. This course will combine European history with global history, looking both at how the Church changed in the face of major turning points in modern European history (the Scientific, French, and Russian Revolutions; the two world wars; and the Cold War) and at its missionary encounters and long-term presence across the world (in Latin America, India, China, Africa, and North America).

HIST729 Readings in Modern European History (3 Credits)

Reading knowledge of some European language recommended but not required.

HIST739 Readings in the History of Great Britain (3 Credits)**HIST748 Readings in Modern French History (3 Credits)****HIST749 Readings in German History, 1815 to the Present (3 Credits)**

Reading knowledge of German is encouraged, but not required.

Repeatable to: 9 credits if content differs.

HIST758 Readings in Eastern European History (3 Credits)

Selected topics in the history of the Hapsburg monarchy and the successor states, Poland and the Balkans. Emphasis on the rise of nationalism during the 19th century and the experience with fascism and communism in the 20th century.

Repeatable to: 6 credits if content differs.

HIST759 Readings in Russian and Soviet History (3 Credits)**HIST768 Readings in Chinese History (3 Credits)****HIST778 Readings in Latin American History (3 Credits)****HIST779 Readings in Middle Eastern History (3 Credits)****HIST789 Readings in Modern European Intellectual History (3 Credits)****HIST798 Readings in Jewish History (3 Credits)**

Readings on selected topics in Jewish history. Emphasis on analysis of primary sources. Reading knowledge of Hebrew recommended.

Repeatable to: 6 credits.

HIST799 Master's Thesis Research (1-6 Credits)**HIST808 Seminar in the History of Science and Technology (3 Credits)****HIST809 Seminar in the History of Women and Gender (3 Credits)**

Repeatable to: 9 credits if content differs.

HIST810 Museum Research Seminar (3 Credits)

A research seminar focusing on the practice and presentation of cultural and historical scholarship in museums and historical sites. Students will complete an original research project on the challenges and opportunities of public exhibition and interpretation of cultural and historical research.

Prerequisite: AMST655, ANTH655, or HIST610.

Cross-listed with: AMST856, ANTH856, INST786.

Credit Only Granted for: AMST856, ANTH856, HIST810, INST728U or INST786.

HIST811 Museum Scholarship Practicum (3-6 Credits)

Students devise and carry out a research program using the collections at the Smithsonian Institution or some other cooperating museum, working under joint supervision of a museum professional and a university faculty member.

Prerequisite: AMST856, ANTH856, or HIST810.

Cross-listed with: AMST857, ANTH857, INST787.

Restriction: Permission of Museum Scholarship Program required.

Credit Only Granted for: AMST857, ANTH857, HIST811, INST728I or INST787.

HIST819 Special Topics in History: Independent Research (1-3 Credits)

Individual graduate research in an area not covered by current seminar offerings. The product will be a finished research paper normally based on original materials.

Restriction: Must be in History program; and permission of ARHU-History department.

Repeatable to: 6 credits if content differs.

HIST829 Seminar in Latin American History (3 Credits)**HIST838 Seminar in Ancient History (3 Credits)**

Restriction: Permission of instructor.

Repeatable to: 6 credits.

HIST839 Seminar in Medieval and Early Modern European History (3 Credits)

HIST848 Seminar in Modern European History (3 Credits)

HIST849 Seminar in Russian and Soviet History (3 Credits)

HIST869 Seminar in Recent American History (3 Credits)

HIST878 Seminar in Colonial American History (3 Credits)

HIST879 Seminar in the American Revolution and Formative Period (3 Credits)

HIST880 Seminar in Southern History (3 Credits)

HIST888 Seminar in the Middle Period and Civil War (3 Credits)

HIST898 Pre-Candidacy Research (1-8 Credits)

HIST899 Doctoral Dissertation Research (1-8 Credits)

HLHP - Health and Human Performance

HLHP615 Crises of Aging: Time, Retirement and Widowhood (3 Credits)

A cross-disciplinary and multidisciplinary investigation of phenomena which comprise a significant portion of the issues confronting an older adult's life: (1) introduction to multiple processes of adulthood and aging; (2) the concepts and meaning of time; (3) pre-retirement and retirement adjustments; and (4) loss and widowhood.

Formerly: PERH615.

HLHP625 Issues in Retirement: Theory and Practice (3 Credits)

Multidisciplinary examination of retirement phenomena, including theories of transition, government and private sector policies, social expectations, physical correlates, personal adjustments, and economic consequences. Emphasis upon research utilization.

Formerly: PERH625.

HLHP688 Field Work in Aging (1-6 Credits)

Sequences of supervised field experience in the field of aging, including direct service, administration, research, or training. Emphasis on career exploration and assessment in relation to the field of aging.

Prerequisite: Permission of SPHL-School of Public Health.

Formerly: PERH688.

HLHP689 Selected Problems in Health, Physical Education and Recreation (1-6 Credits)

Research projects in special areas in health, physical education and/or recreation which have interdisciplinary implications not covered in structured courses.

Formerly: PERH689.

HLHP780 Interdisciplinary Issues in Aging (3 Credits)

Multidisciplinary approaches to the processes of aging to achieve a more holistic understanding. Pedagogical research dissemination, peer instruction, guest lecturing, and informal discussion. The demonstration of the multilateral nature of growing older. Discussion of cross-disciplinary and interdisciplinary research proposals.

Formerly: PERH780.

HLMN - Hillman Entrepreneurs Program

HLSA - Health Services Administration

HLSA465 Redesigning Mental Health Services (3 Credits)

Students will use Design Thinking to create, reshape, redesign and transform the ways in which mental health and wellness is perceived and addressed on the campus. This course will incorporate students and the UMD community as stakeholders in designing, planning and contributing to developing solutions that leverage existing mental health resources or create new pathways to improve mental health and wellness at UMD. Students will learn and use design thinking skills to enhance public health practice skills in project proposals and grant writing.

Prerequisite: HLTH366.

Recommended: EPIB301.

HLSA484 Redesigning Health Care: Developing a Clinic to Meet Community Needs (3 Credits)

Provides an opportunity for students to learn a key entrepreneurial skill, Human Centered Design Thinking, while helping to build, reshape, redesign and transform delivery of health care in the Mona Center, a new community center and clinic in Prince George's County. This new, modern vision for a health and wellness clinic embraces student involvement in designing, planning and contributing to innovative programs, solutions, and processes to improve the clinic's ability to meet community and patient needs by addressing the social determinants of health as well as traditional clinical health status. Students in the class will develop empathy for patients, providers and other stakeholders, define problems, select a specific problem for intervention, understand problems based on stakeholder input, ideate, reframe and suggest options to solve or address the problem, prototype solutions, test ideas, and make recommendations to inform implementation and ongoing measurement and monitoring of impact.

Restriction: Must have completed a minimum of 60 credits.

Additional Information: Selected class sessions will be on-site at local organizations such as Mona Clinic in Temple Hills, MD, HAIR Network shops in Hyattsville and the Sarvis Empowerment Cafe in Riverdale. The course also requires off-campus work at nearby locations.

HLSA601 Introduction to Health Systems (3 Credits)

An overview of the U.S. health care system using an interdisciplinary perspective. Students will learn about the financing, delivery, and use of healthcare in a historical, economic, and political context. An emphasis will be given to contemporary policy issues and debates, and there will be a focus on inequality within the U.S. health system.

HLSA611 Introduction to Health Equity (3 Credits)

The emerging field of health equity is concerned with understanding the causes and consequences of social disparities in population health. This course is designed to expose students to the foundational issues in health equity from a variety of perspectives. Through weekly meetings and discussion, students will develop familiarity with the major literature in the field of health equity. The course is divided into three sections: (1) Understanding Addressing Health Disparities; (2) Disparity Populations; and (3) Solutions in Health Equity. Students will gain understanding of the dimensions and sources of health inequality, including race/ethnicity, socioeconomic status, gender, nativity, and sexual minority status. Current policy debates and recent policy developments related to health equity are also briefly discussed.

HLSA688 Independent Study (1-6 Credits)

Master or doctoral students who desire to pursue special research problems under the direction of a faculty member of the department may register for 1-6 hours of credit under this number.

Prerequisite: Permission of SPHL-Health Services Administration department.

Repeatable to: 9 credits if content differs.

HLSA689 Field Work in Aging (1-6 Credits)

Individual instruction course.

Prerequisite: Permission of SPHL-Health Services Administration department.

Repeatable to: 6 credits if content differs.

Formerly: SPHL688.

HLSA702 Policy and Politics of Health (3 Credits)

Organizational and financial components of the U.S. health care system, including social and political forces that bind the system. Advanced political analysis of the health care system, including key issues and problems.

HLSA703 Seminar in Health Equity (1 Credit)

Student-led presentations and discussion of contemporary literature in the areas of health disparities and health equity, social determinants, (eg. race, ethnicity, sex, age, sexual identity, disability, socioeconomic status, and geographic location) and policies and programs to address disparities. The emphasis is on papers describing new research findings, novel techniques, innovative methods, and emerging issues.

HLSA709 Graduate Seminar (1 Credit)

The purpose of the course is for doctoral students to present their work to fellow doctoral students and faculty in an informal and supportive environment. Faculty and students provide feedback and suggestions that are helpful to the presenting students. Several sessions each semester are for external speakers on interesting research topics.

Prerequisite: HLSA doctoral students.

Restriction: Must be HLSA doctoral student.

Repeatable to: 6 credits if content differs.

HLSA710 Healthcare Management: Foundations and Principles (3 Credits)

Concepts and managerial activities essential to achieve the goals of health care organizations are examined and discussed. Managerial processes include planning, decision-making, etc. required to operate and change health care organizations will be discussed. Special emphasis will be placed on the leader/managers role in developing and maintaining an effective system for providing healthcare.

HLSA711 Health Economics and Analysis (3 Credits)

Provides an analysis of health and health care services as economic goods. Using microeconomic theories, we will examine the behavior of health care providers, consumers, markets, and firms.

HLSA713 Seminar in Health Policy (1 Credit)

Student-led presentations of contemporary literature in the areas of health policy, health care reform in the nation and Maryland, and evaluation of health policies and programs. Emphasis on papers describing new research findings, novel techniques, innovative methods, and emerging issues.

HLSA714 Economic Evaluation of Medical Care (3 Credits)

An overview of the theory and applications of cost-benefit analysis, cost-effectiveness analysis, and related forms of economic evaluation/decision analysis in the health care sector.

Prerequisite: HLSA601 and SPHL602; or students who have taken courses with comparable content may contact the department.

HLSA715 HSR Data Lab (1 Credit)

Introduces students to foundational skills in statistical programming and surveys data types and data sources commonly used in Health Services Research (HSR). Principles of statistical workflow and reproducibility are covered. The course focuses on programming in Stata, but also provides a very brief introduction to R and SAS.

Corequisite: HLSA725.

HLSA720 Health Law and Ethics (3 Credits)

The legal system helps determine the relationships prevailing among individuals, institutions and governments by setting out the rights, duties and powers of the various parties. This course will look at some of the more important concepts the law uses within the context of health services and public health.

HLSA721 Using Demographic Data for Health Policy Analysis (3 Credits)

The goal of this course is to introduce students to the major demographic data sets that are used in health policy research and to provide hands-on experience using these data to answer policy oriented research questions

Prerequisite: SPHL602; or students who have taken courses with comparable content may contact the department; or permission of instructor.

Additional Information: Priority enrollment will be given to students in the Department of Health Services Administration programs.

HLSA723 Health Policy Analysis and Advocacy (3 Credits)

Examination of the politics of the health policy process, including the effects of American political structure and institutions; economic and social factors; interest groups, classes, and social movements; media and public opinion, and other factors. The emphasis is both on understanding how public policy is made as well as how to influence the process. Students will learn about (1) how health policy is developed, adopted, and implemented, (2) the political, institutional, economic, social, and other factors that influence and shape the process, and (3) the basic approaches and tools of strategic advocacy.

Prerequisite: HLSA601.

HLSA724 Developing and Implementing Health Policy in Maryland (3 Credits)

Provides students with a thorough overview of Maryland's health care policymaking process, including critical analysis of legislative, regulatory, financing, and delivery factors that shape health care policy. Examination of major current and ongoing health care policy issues in the state of Maryland. Students will be given the opportunity to receive briefings from key stakeholders who will offer their insights into complex and controversial health care policy issues in Maryland.

Prerequisite: Must have completed or be concurrently enrolled in HLSA601.

HLSA725 Econometrics in Public Health (3 Credits)

Empirical course to introduce students to econometric methods and their applications in public health.

Prerequisite: SPHL602; or students who have taken courses with comparable content may contact the department.

Additional Information: priority enrollment will be given to students at the School of Public Health.

HLSA727 Causal Inference in Health Services Research (3 Credits)

An overview of the conceptual and empirical tools used to infer causation in health and health care research. Advantages and limitations of experimental and quasi-experimental designs in health services research are discussed and students gain experience through applied exercises.

Prerequisite: HLSA725 or permission of instructor.

HLSA730 Healthcare Human Resources (3 Credits)

Provides an introduction to the management of human resources in the healthcare setting using basic human resources management doctrine common to all industries. Content includes principles and methods of personnel including employment, recruitment, selection, retention, training and development, compensation including wage and salary administration performance appraisal, job analysis and labor relations.

HLSA731 The Social Construction of Health and Health Service Delivery (3 Credits)

Dedicated to the social processes that shape health, health care seeking, health professions, and health care organizations. Students will learn how key concepts and theories from social epidemiology, medical sociology, organizational behavior, and management theory are integrated and applied to health services research. Readings will include a mix of theoretical and applied papers, and particular attention will also be paid to the research methods, study design, and construct measurement used in theory-informed research. The semester will culminate in a development of a theory-based empirical research proposal.

Prerequisite: HLSA601.

Restriction: Must be in a doctoral program; or permission from instructor .

HLSA732 The Evolving U.S. Health Care System (3 Credits)

Conducting policy-relevant health services research requires an in-depth understanding of the United States' evolving health care system. This class will provide an overview of ongoing and emerging challenges in health care financing, delivery, quality, and access. We will use theoretical tools from health services research to understand these trends, their driver, and their impacts.

Prerequisite: HLSA723.

Restriction: Must be in the Health Services Research PhD program; or permission from the instructor.

HLSA733 Topics in Health Care Reform (3 Credits)

An overview of the Patient Protection and Affordable Care Act of 2010 (ACA) and the major health care reforms explicitly included in the law, while also considering the state implementation decisions and provider innovation that has occurred over time due to the ACA is provided. It will address issues of implementation of Medicaid expansion, the state and federal Exchange, costs of care and efficiency, improving quality and patient safety as well as prevention and public health. We will discuss the actual process of passing the law, what compromises were made, the funding sources, recent changes, regulations, state decisions, waivers, and demonstration or pilot programs that have been developed and/or funded due to the law. We will also focus on the implementation of the law in Maryland, where the legislature and governor decided to expand Medicaid and create a state-based insurance exchange. However, the impacts of the law could be different in Maryland than in other states due to the population, moderate politics, and the presence of state price setting authority for hospitals and other providers.

Prerequisite: HLSA601, HLSA702, or HLSA711.

HLSA740 Healthcare Strategic Planning and Marketing (3 Credits)

An understanding of strategic management and marketing is provided which enables the students to lead the process of strategic planning in a healthcare organization. By conducting a marketing and strategic planning process, health care organizations are better able to cope with dramatic changes in technological, social, political, regulatory, and competitive aspects of the health care market. Strategic management enables organizations to identify issues unique to them, which hinder or promote organizational success. Through course readings, class discussions, analyses of secondary quantitative and qualitative data, and presentation of case studies, students gain a thorough understanding of the strategic management process. Students will apply core competencies through a comprehensive strategic and marketing plan. Plans will be defended through an oral presentation.

HLSA742 Quantitative Methods in Healthcare Administration (3 Credits)

The goal of this course is to give students the background needed to interpret and critique statistical methods and results encountered in the healthcare administrative field. In addition, this course will help students develop skills to conduct basic statistical analyses, become familiar with advanced functions in Excel, and acquire the ability to recognize, communicate, and answer health services related research questions.

Restriction: Must be in the Master of Health Administration program.

HLSA745 Public Health Practice and Management (3 Credits)

Examines the relationship of practice and management in performing essential public health services on local, state and national levels.

HLSA750 Healthcare Management Information Systems (3 Credits)

Provides a background and overview of the analysis, design, evaluation, selection, installation, use, and management of information systems in health care settings. Students will review the information management function and value of information and the role of information technology in the provision of high quality care and management decision making. Details on computer hardware, software, networking, and telecommunications sufficient for understanding of concepts relevant to health care managers and staff will be addressed.

HLSA760 Healthcare Financial Management (3 Credits)

Offers content in health services financial management with emphasis on applying traditional financial theories to health care and the health care system. Focus on decision-making using accounting and finance theories, principles, concepts and techniques most important to health care leaders.

HLSA765 Dissertation Proposal Development Seminar (3 Credits)

Designed to support doctoral students prepare their dissertation proposal and oral presentation. The course is structured around a literature synthesis and development of a modified AHRQ R36 grant application which includes developing a research question and hypotheses, a conceptual model, specific aims, background and significance, and research strategy. The importance of communicating complex ideas through oral and written forms will be emphasized.

Recommended: Completed all coursework related to one's dissertation topic; and identified in collaboration with one's dissertation advisor a topic area and potential data set.

Restriction: Must be in Health Services Ph.D. (Doctoral) program; or permission of instructor. And must have passed departmental qualifying exam.

HLSA766 Foundational Readings in Health Services Research (3 Credits)

An overview of the foundational papers that inform health services research and its related disciplines; including literature on key conceptual models, classic empirical studies, and research illustrating cutting edge methods or findings. The major theoretical frameworks and empirical challenges of the field will be examined through critical reading and discussion among students. The course is organized around preparation for the qualifying exam in the Health Services Ph.D. program.

Prerequisite: Completion of the six HLSA Health Services Research core courses.

Restriction: Must be in Health Services Ph.D. (Doctoral) program.

HLSA770 Continuous Quality Improvement in Healthcare (3 Credits)

Designed for the health care professional or administrator involved in quality assurance in health care. Course includes historical beginnings, state-of-the-art, voluntary, governmental efforts, and tools to promote quality assurance.

HLSA772 Healthcare Leadership and Communications (3 Credits)

Health care administrators rely on transformational leadership skills and insights to help their organizations rise to the social financial, public health, and technological challenges of the future. Students will assess and develop their leadership strengths, apply key leadership communication principles, and critically analyze relevant leadership models, exploring their utility in addressing key leadership issues in health care organizations. An underlying theme will be the identification of core values involved in health care delivery, integration of those values in personal and organizational missions, and effective communication to stakeholders.

HLSA775 Health Services and Policy Research Methods (3 Credits)

Survey of health services and policy research methods, including conceptualization, measurement, survey sampling, literature review, different research designs, causal inference, data analysis, and interpretation of basic statistics. This is an introductory course in research methods designed for master's students in the School of Public Health.

Restriction: Must be in a major in SPHL-School of Public Health; or permission of instructor.

HLSA777 Program Evaluation Field Experience (3 Credits)

Program evaluation is a critical component in designing and operating effective programs. Organizations seek more accountability for the funds they provide to public or private projects. This course serves as an introduction to assessment methodology and evaluation tools commonly used in program evaluation. Students will gain practical experience through a series of exercises involving the design of a conceptual framework, development of indicators, and development of an evaluation plan to measure impact, and cost benefit/cost effectiveness analysis. The course will cover mixed methods research including qualitative and quantitative analysis, methodologies, and/or paradigms in a research study. Students will evaluate a community health program funded by the Maryland Community Health Care Commission (CHRC), and the Commission director will guide selection of the program.

Additional Information: Students will travel to the program site approximately three times to guide the evaluation design and collect data.

HLSA778 Practical Experience in Public Health (1-4 Credits)

Practical experience providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the experience will depend upon the student's background and career goals.

Prerequisite: Permission of SPHL-Health Services Administration department.

Repeatable to: 4 credits.

Credit Only Granted for: HLSA785 or HLSA778.

HLSA780 Qualitative Methods for Health Services Research (3 Credits)

This practice-based learning course will include orientation to the major paradigms in qualitative inquiry, developing research questions suitable for qualitative study, and an in-depth exploration of qualitative research methodologies and methods, particularly as they are applied in health services research. Students will collect, analyze, and present qualitative data using techniques learned in this course. The course will provide students with the foundational skills to conduct their own qualitative studies.

Credit Only Granted for: HLSA780 or HLTH625.

HLSA785 Internship in Public Health (3 Credits)

Internship and seminar providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the internship will depend upon the student's background and career goals.

Prerequisite: Permission of SPHL-Health Services Administration department.

Credit Only Granted for: HLSA785 or HLSA778.

HLSA786 Capstone Project in Public Health (3 Credits)

Capstone experience providing opportunity to apply knowledge and skills to a specific public health problem or issue. Completion of project relevant to public health under the direction of an advisor.

Prerequisite: Permission of SPHL-Health Services Administration department.

HLSA787 Health Equity Practice, Policy, and Research (3 Credits)

The objective of this course is to introduce students to the role of key stakeholders, including health care systems/organizations, governmental agencies/entities, and community-based organizations in advancing health equity to improve population health. Students will develop a set of foundational practices that centers health equity and social justice to develop, understand, evaluate, analyze, and apply health equity strategies in practice settings. This class is designed to build the capacity of students to translate theory into action and support a dynamic process of learning.

Restriction: Must be in a graduate major in SPHL-School of Public Health; or permission of instructor.

HLSA788 Critical Readings in Health Services Research (3 Credits)

Current and classic readings and research on various aspects of the health services research including the health care system, health care policy and social science research on health (including economics, psychology, political science, sociology etc.). The readings will be critically analyzed and applied to students research and current research as well as applications to health services research issues.

Repeatable to: 9 credits if content differs.

HLSA790 Advanced Methods in Health Services Research (3 Credits)

Provides an in-depth examination of health services research literature with emphasis on methodological scrutiny and application of methods beyond linear regression such as categorical regression, survival analysis, selection issues, and endogeneity.

Prerequisite: SPHL602; or permission of instructor.

HLSA791 Advanced Research Seminar II (3 Credits)

Introduces pre-candidates at the end of their coursework to methods for locating, downloading and processing secondary data sources with complex survey design. The course emphasizes analysis of the Medical Expenditure Panel Survey (MEPS) data with Stata statistical software. The analysis and synthesis skills acquired throughout the students' doctoral coursework are applied to write and conduct analysis for a publishable journal article.

Restriction: Must be in a major in SPHL-School of Public Health; or permission of instructor.

HLSA792 Health Services Portfolio Seminar I (3 Credits)

Assists doctoral pre-candidates at the end of their coursework with completing the required research portfolio requirements.

Restriction: Must be in a major in SPHL-School of Public Health; or permission of instructor.

HLSA793 Health Services Portfolio Seminar II (3 Credits)

Introduces students to the main sections of a publishable paper. This is an applied course so students are expected to learn how to critique a research article and how to write a publishable one. By the end of this course, each student is expected to have written a publishable paper with a formal abstract, specific to their research topic.

Restriction: Must be in a major in SPHL-School of Public Health; or permission of instructor.

HLSA798 HLSA Journal Club (1 Credit)

The course will highlight current topics in health services research. Outside speakers will present their research in a few of the classes. For the other classes, graduate students in the HLSA programs will select important and timely articles that they will present to the class for discussion in an informal setting.

Restriction: Must be HLSA graduate student.

Repeatable to: 8 credits if content differs.

HLSA799 Master's Thesis Research (1-6 Credits)**HLSA898 Pre-Candidacy Research (1-8 Credits)****HLSA899 Doctoral Dissertation Research (1-8 Credits)**

HLTH - Health

HLTH402 Disability is Not an Outcome: An Introduction to Understanding Disability (3 Credits)

With an intent to disrupt traditional understandings of disability as a health outcome to be prevented, this course will introduce students to disability as an identity, a community, a population of interest to public health professionals. To change this understanding students will explore historical representations of disability, ableism, and lived experiences of people with disabilities. Disability is a multi-layered concept that broadly describes a wide range of people. Although geared toward public health scholars, the mix of readings, discussions, and assignments will help students reflect and integrate learning into their own fields of study. The course examines factors that led to systemic oppression, and methods and strategies of moving toward a more inclusive society.

HLTH410 Honors Seminar (3 Credits)

Undergraduate majors with a strong academic record are provided the opportunity to engage in challenging educational experiences related to the social and behavioral aspects of public health. Students will learn the skills and knowledge to develop, propose, defend, and complete an honors thesis or honors project.

Prerequisite: HLTH200; and must have completed 2 other courses in HLTH.

Restriction: Minimum cumulative GPA of 3.5; and must have completed 45 credits before applying.

HLTH420 Effective Strategies for Public Health Practice (3 Credits)

The purpose of this course is to present the interrelationships of curriculum planning, methodology and the selection and use of successful public health presentation strategies. Special problems associated with public health presentations are discussed, and students become familiar with a variety of resources as well as with planning for and implementing demonstration presentations.

Prerequisite: Minimum grade of C- in HLTH140 and HLTH230 .

Restriction: Must be in a major within the SPHL-Behavioral and Community Health department.

HLTH424 Lesbian, Gay, Bisexual & Transgender Health (3 Credits)

The preparation of students to be knowledgeable advocates for the health of lesbian, gay, bisexual, and transgender (LGBT) populations.

Course focus is defined by the Healthy People 2020 federal health objectives for LGBT populations: data collection for research, culturally competent healthcare, bullying in schools, suicide, homelessness, and sexually transmitted diseases including HIV.

Recommended: Students should have some familiarity with basic psychology, sociology and/or epidemiology.

Restriction: This course is restricted to students who have completed a minimum of 60 credits. Jointly offered with HLTH624.

Credit Only Granted for: HLTH424 or HLTH624.

HLTH430 Health Education in the Workplace (3 Credits)

A survey of the role of health education in work settings. Examination of occupational stress, the health effects of shift work, women's health in the workplace, health education approaches to informing workers and management, and health promotion programs in the workplace.

HLTH431 Health Literacy in Action (3 Credits)

This course introduces the concept of health literacy and develops the knowledge and skills to understand the field and engage productively about health literacy with healthcare providers, systems, and policy makers. The class explores diverse perspectives about health information and communication, and different pathways and strategies to help create the conditions for more informed and engaged individuals and communities.

Recommended: HLTH 371; or equivalent.

Repeatable to: 0 credit.

Credit Only Granted for: HLTH431 or HLTH498L.

Formerly: HLTH498L.

HLTH432 Medical Terminology (3 Credits)

Provides the framework for understanding medical language and terminology used by health care professionals. Students will gain an understanding of the rules of building and analyzing medical terms from word origins and will learn correct pronunciation, definitions, and spelling for all of the body systems, major pathological conditions, common disorders, prescribed medications, and more. Whether a student is interested in learning more about the medical field or they want to acquire practical knowledge for future personal use, this course provides the foundation for understanding the language of medicine.

Credit Only Granted for: HLTH432 or HLTH498T.

Formerly: HLTH498T.

HLTH434 Introduction to Public Health Informatics (3 Credits)

Provides an overview of the field of public health informatics and the influence of technology on the public's health and well-being. Emphasizes the application of various technologies and computer/internet applications to support public health research and practice, including strategies to address new and emerging threats.

Restriction: Must be in one of the following programs (Community Health; Public Health Science) ; and must have earned a minimum of 60 credits.

Credit Only Granted for: HLTH434 or HLTH498E.

Formerly: HLTH498E.

HLTH452 Global Health and Social Justice (3 Credits)

Evaluates the relationship between social justice and population health through critical discourse analysis of social determinants of health and applications of community-based methods for reducing population health inequities within and across national borders. The class aims to stimulate students' critical analysis to identify, describe, measure and apply consequences of injustices in population ill-health exposures and practices (policies, interventions and services). Students will apply critical thinking about how social injustices create preventable health disparities, unequal social determinants, poor environmental exposures and diseases among vulnerable populations in much of low-income countries.

Jointly offered with: HLTH602.

Credit Only Granted for: HLTH452 or HLTH602.

HLTH460 Multicultural Population Health (3 Credits)

Health concerns of U.S. ethnic minority groups and factors placing them at elevated risk for disease and injury. Health education concepts and strategies to reduce disparities between their health status and the health status of the general population.

Prerequisite: HLTH140, HLTH230, or HLTH366; or permission of SPHL-Behavioral & Community Health department.

Restriction: Must be in a major within the SPHL-Behavioral & Community Health department; or must be in the Anti-Black Racism Minor.

HLTH471 Women's Health (3 Credits)

The women's health movement from the perspective of consumerism and feminism. The physician-patient relationship in the gynecological and other medical settings. The gynecological exam, gynecological problems, contraception, abortion, pregnancy, breast and cervical cancer and surgical procedures. Psychological aspects of gynecological concerns.

Cross-listed with: WGSS471.

Restriction: Must be in a program in the Harriet Tubman Department of Women, Gender, and Sexuality Studies; or must be in a major within SPHL-Behavioral & Community Health department.

Credit Only Granted for: HLTH471, WMST471, or WGSS471..

Formerly: WMST471.

HLTH489 Field Laboratory Projects and Workshop (1-6 Credits)

A course designed to meet the needs of persons in the field with respect to workshop and research projects in special areas of knowledge not covered by regularly structured courses.

HLTH490 Professional Preparation in Community Health (3 Credits)

The development of skills necessary for joining the public health work force post-graduation, as well as assistance in obtaining an appropriate internship that will serve as a final semester, capstone experience.

Students will be exposed to various relevant professional experiences, and will be afforded the opportunity to strengthen their own individual skills by selecting from a menu of skills-based learning modules that best suit their perceived needs.

Prerequisite: Minimum grade of C- in EPIB301, EPIB315, SPHL100, HLTH124, HLTH140, HLTH200, HLTH230, HLTH302, BSCI170, BSCI171, and BSCI201; and students must have completed or be concurrently enrolled in HLTH364.

Corequisite: HLTH391.

Restriction: Must be in a major within the Behavioral and Community Health department.

HLTH491 Community Health Internship (12 Credits)

Integrating theory with practice in a community health setting.

Prerequisite: Minimum grade of C- in HLTH420 and HLTH490.

Restriction: Must have completed all program requirements and be in the last semester of the Community Health degree program.

HLTH492 BS/MPH Community Health Internship (9 Credits)

Integrating theory with practice in a community health setting.

Prerequisite: Minimum grade of C- in HLTH490.

Restriction: Must be a Community Health major who has been admitted to the combined BS/MPH degree program.

HLTH498 Special Topics in Health (3 Credits)

Topics of special interest in areas not covered by regularly scheduled courses.

Repeatable to: 6 credits if content differs.

HLTH602 Global Health and Social Justice (3 Credits)

Evaluates the relationship between social justice and population health through critical discourse analysis of social determinants of health and applications of community-based methods for reducing population health inequities within and across national borders. The class aims to stimulate students' critical analysis to identify, describe, measure and apply consequences of injustices in population ill-health exposures and practices (policies, interventions and services). Students will apply critical thinking about how social injustices create preventable health disparities, unequal social determinants, poor environmental exposures and diseases among vulnerable populations in much of low income countries.

Jointly offered with: HLTH452.

Credit Only Granted for: HLTH452 or HLTH602.

HLTH606 Foundations of Public Health Education and Policy (3 Credits)

Examines foundations and content of two professions, health education and public health, including history, mission, terminology, philosophy, ethical principles and scientific foundations. Emerging and reemerging threats to the public's health will be discussed, as well as societal influences on health and health policy. Also addresses professional competencies and preparation, and the role of professional organizations.

Restriction: Must be in MPH: Community Health Education (Master's) program; or must be in Ph.D.: Public and Community Health (Doctoral) program.

HLTH609 Public Health Journal Club (1 Credit)

Includes discussion of recent literature from leading peer-reviewed journals on a specific psychosocial construct and health outcome, with students presenting two articles during the semester. The purpose of this course is to read and consider health constructs and outcomes from a multidisciplinary perspective.

Restriction: Must be in the Behavioral & Community Health doctoral program; or be an advanced MPH student; and permission of Behavioral and Community Health department; or permission of instructor.

Repeatable to: 4 credits.

HLTH624 Advanced Lesbian, Gay, Bisexual & Transgender Health (3 Credits)

The preparation of students to be knowledgeable advocates for the health of lesbian, gay, bisexual, and transgender (LGBT) populations. Course focus is defined by the Healthy People 2020 federal health objectives for LGBT populations: data collection for research, culturally competent healthcare, bullying in schools, suicide, homelessness, and sexually transmitted diseases including HIV.

Recommended: Students should have some familiarity with basic psychology, sociology and/or epidemiology.

Credit Only Granted for: HLTH424 or HLTH624.

HLTH625 Community Assessment through Qualitative Methods (3 Credits)

A discussion of major paradigms in qualitative inquiry, an overview of the process of qualitative research, and an introduction to several qualitative research methods, including grounded theory, ethnography, phenomenology, and content analysis. Students will collect, transcribe, analyze, and present qualitative data using introductory interview and analytic techniques.

Restriction: Course will be restricted to Behavioral and Community Health graduate students.

HLTH631 Teaching PreK-8 Health Education (3 Credits)

Students will learn aspects of teaching preK-8 health education including: characteristics of preK-8 students, testing, grading, teaching lifetime skills, and effective teaching techniques using SHAPE America Standards. Students will engage in building instructional lesson plans for health education students in preK-8 grades.

HLTH632 Teaching in High School Health Education (3 Credits)

Students will learn aspects of teaching high school health education including: characteristics of high school students, testing, grading, teaching lifetime activities, and effective teaching techniques using SHAPE America Standards. Students will engage in building instructional lesson plans for health education students in high school.

HLTH635 Leadership in Crisis: Lessons from Select Public Health Issues (3 Credits)

Examine leadership successes and failures during the twin pandemics of COVID-19 and structural racism in the United States in 2020. Define a public health crisis and explore characteristics of highly functioning leaders during crises. Critically analyze current literature on leadership during these twin pandemics. Explore ways in which leaders adapt their own behavior and mobilize their workforce to respond to their constituencies to address crises. Students will critically analyze the performance of a current public health leader in a case study.

HLTH652 Quantitative Research Methods I in Public Health (3 Credits)

Intermediate statistics and procedures in public health-related research for doctoral students. Focuses on applied statistics rather than theoretical, with emphasis on 1) how to apply statistical models, 2) how to perform the analysis with available software, and 3) how to interpret findings.

Restriction: Must be in MPH: Community Health Education (Master's) program; or must be in Ph.D.: Public and Community Health (Doctoral) program.

Credit Only Granted for: HLTH652 or HLTH688R.

Formerly: HLTH688R.

HLTH653 Quantitative Research Methods II in Public Health (3 Credits)

Intermediate and advanced statistics and procedures in health-related research for doctoral students with the focus on applications of these statistical methodological methods to public health research.

Prerequisite: HLTH652.

Restriction: Must be in a major within SPHL-Behavioral & Community Health department.

Credit Only Granted for: HLTH653 or HLTH688T.

Formerly: HLTH688T.

HLTH654 Communicating in Public Health Leadership (3 Credits)

Offers students an opportunity to understand public health leadership communication in various sectors, assess best practices in public health leadership communication, and how to implement these concepts in public health leadership communication to develop a confident and culturally aware voice. The overall aims of the course are to: (a) determine the different organizational communication forms in public health leadership; and (c) practice communication strategies to inform, engage, and persuade individuals within and outside of the organizational structure on various public health issues.

Recommended: HLTH671.

HLTH665 Health Behavior I: Theoretical Foundations of Health Behavior (3 Credits)

Provides students with an understanding of the application of the social and behavioral sciences to health; addressing behavioral, social, and cultural factors that influence individual and population health and health disparities over the life course. Public health issues related to individuals and populations will be examined in terms of social and behavioral theories, empirical research findings, and methodologies.

HLTH666 Health Behavior II: Applying Health Behavior Theory (3 Credits)

Develops students' expertise in applying health behavior theory, with an emphasis on cultural appropriateness and through a social justice lens. This course will build on material learned in HLTH 665, and will involve a particular emphasis on application of health behavior theory. The course will be taught using a "hands-on" approach, giving students a skill foundation in applying health behavior theories throughout the life course of an intervention from the research question and hypothesis, to intervention development, and evaluation.

Prerequisite: HLTH665.

HLTH668 Teaching Internship in Health Education (1-6 Credits)

The MCERT Health Education internship is an intense experience that immerses interns into the life of their assigned PreK-12 school. The internship experience is designed to provide our pre-service teachers with a rich opportunity to learn the craft of teaching through close observation of experts as well as practice in the planning, delivery and assessment of instruction.

Restriction: Must be enrolled in Pre-K to 12 Health Education Master of Education program.

Repeatable to: 6 credits.

HLTH671 Public Health Communication (3 Credits)

An exploration of the the broad and diverse field of health communication including medical encounters, everyday communication about health, advertising, news, public health campaigns, community outreach, public policy, and international programs. Theories and applied efforts that have been studied and documented will be examined.

Restriction: Non-SPH students must obtain permission from the instructor prior to registering.

Credit Only Granted for: HLTH670 or HLTH671 and HLTH672.

Formerly: HLTH670.

HLTH672 Public Health Informatics (3 Credits)

A basic overview of Informatics and its application in a public health setting. The major goal is for students to understand the basic tools and building blocks needed to utilize this technology in order to improve their professional productivity

Cross-listed with: EPIB672.

Restriction: Instructor permission is required for students not enrolled in a degree seeking program in the School of Public Health.

Credit Only Granted for: HLTH670 or HLTH672 or EPIB672.

Formerly: HLTH670.

HLTH674 Health Literacy (3 Credits)

Introduction to health literacy research, practice, and skills. The course will develop students' understanding of how health literacy is both a barrier and an asset for health. We will also examine how health literacy affects a wide range of outcomes. Students will learn the basics of health literacy concepts, models, and research methods, and discuss health literacy research and evaluation in clinical, public health, and community settings. Students will study key health topics, populations, and contexts for health literacy research and practice. The course will describe professional skills necessary for effective public health communication practice and provide opportunities to practice the skills. The implications of research for public health practice, policy, and consumer/patient interventions and behavior will be integrated so that public health practitioners and researchers are prepared to address health literacy in their future work.

Recommended: Health communication, communication, journalism, literacy, or cognitive or information sciences classes.

Credit Only Granted for: HLTH688L or HLTH674.

Formerly: HLTH688L.

HLTH678 Professional Seminar for Teacher Development in Health Education (3 Credits)

The spring seminar course is an extension of the fall seminar course and spring internship course. It accompanies a full time undergraduate level teaching internship and is intended to support and extend students' field experience learning. The spring seminar course is designed to continue to provide students with the support they need to successfully meet the College of Education's Health Education programmatic requirements and the Maryland State Department of Education's PreK-12 Health and Physical Education Teacher Certification Requirements. These requirements include demonstrating mastery on all of the College of Education's Foundational Competencies (FCCs) and Performance Based Assessments (PBAs) and the national edTPA, InTASC, Health Education Teacher Education Standards (HETE) and MSDE and SHAPE America Standards.

Restriction: Must be in the MCERT Health Education program.

Repeatable to: 3 credits.

HLTH688 Special Problems in Health Education (1-6 Credits)**HLTH701 Mixed Methods in Behavioral and Community Health Research (3 Credits)**

A discussion of major paradigms in mixed method inquiry, an overview of the process of mixed methods research, and an introduction to several mixed methods approaches, including convergent, explanatory sequential, and exploratory sequential designs.

Prerequisite: HLTH625 and HLTH710, or equivalent non-BCH qualitative and quantitative methods courses.

HLTH709 Public Health Research Journal Club (1 Credit)

Discussion of recent research literature from top peer-reviewed journals focusing on cutting edge research issues related to public health.

Examines public health research issues and their relationship to the conduct and application of public health practice.

Restriction: Must be in Ph.D.: Public and Community Health (Doctoral) program; or must be an advanced MPH Behavioral and Community Health student; or permission of instructor.

Repeatable to: 4 credits.

HLTH710 Methods and Techniques of Research (3 Credits)**HLTH711 Advanced Research Methods in Health (3 Credits)**

Quantitative techniques, advanced research methods and design issues.

Prerequisite: HLTH710.

Restriction: Must be in MPH: Community Health Education (Master's) program; or must be in Ph.D.: Public and Community Health (Doctoral) program.

HLTH712 Applied Research Methods in Behavioral and Community Health (3 Credits)

Designed to build on the research skills obtained in HLTH710 and other fundamental research methods and statistics courses. Methods and problems that are commonly encountered in health education research will be discussed including examination of actual research studies. Complex behavioral research issues will be addressed with existing research data sets. With these data sets, students will develop an analytic plan and conduct data analysis.

Prerequisite: HLTH710.

HLTH742 Professional Writing and Presentations (3 Credits)

Acquaints students with various types of professional writing required of public health professionals, including: grant proposals; journal articles; textbooks; presentation proposals and papers; and theses and dissertations. Includes both the form and content of technical documents as well as the processes of writing, peer review, and critique.

Restriction: Must be in MPH: Community Health Education (Master's) program; or must be in Ph.D.: Public and Community Health (Doctoral) program.

Credit Only Granted for: HLTH742 or HLTH688W.

Formerly: HLTH688W.

HLTH774 Community Health Program Planning (3 Credits)

An introduction to the development, planning, and administration of community health programs. The overall goal of this course is to develop a program and conceptualize the implementation of the intervention.

Restriction: Must be in a major within SPHL-Behavioral & Community Health department; or permission of instructor.

Credit Only Granted for: HLTH775 or HLTH774 and HLTH776.

Formerly: HLTH775.

HLTH775 Health Education Program Planning and Evaluation (3 Credits)

A systematic approach to the planning and evaluation of Health Education programs. Diagnosis of the social, psychological, educational and administrative aspects of the health education program. Program monitoring, rigorous methods of impact assessment, and the measurement of efficiency.

Prerequisite: HLTH710; and permission of SPHL-Behavioral & Community Health department.

HLTH776 Community Health Program Evaluation (3 Credits)

An application of basic research methods, and the evaluation of community health programs. Students will evaluate the effectiveness of a community health intervention.

Prerequisite: HLTH710 and HLTH774.

Restriction: Must be in the Behavioral and Community Health (BCHL) doctoral program; and permission of Behavioral and Community Health department; or permission of instructor.

Credit Only Granted for: HLTH775 or HLTH774 and HLTH776.

Formerly: HLTH775.

HLTH778 Practical Experience in Public Health (1-4 Credits)

Practical Experience seminar providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the practical experience will depend upon the student's background and career goals.

Prerequisite: SPHL601, SPHL602, SPHL603, SPHL610, SPHL611, HLTH665, HLTH672, and HLTH780.

Restriction: Must be in the Master of Public Health: Behavioral and Community Health concentration in-person or online program (MBCH or MBCO); and permission of Behavioral and Community Health department.

Repeatable to: 4 credits.

Credit Only Granted for: HLTH785 or HLTH778.

HLTH780 Community Health (3 Credits)

Overview of public health organizations, programs, and policies, including their structure and function, and their ability to change with changing community health needs.

Restriction: Must be in the Behavioral and Community Health doctoral program (BCHL) or the Master of Public Health Behavioral and Community Health concentration in-person or online program (MBCH or MBCO); and permission of Behavioral and Community Health department.

Credit Only Granted for: HLTH740 or HLTH780.

HLTH784 Guided Capstone Preparation Seminar (1 Credit)

The purpose of this seminar is to guide students through the major steps and deadlines associated with developing their capstone project, which is the MPH degree culminating experience. The capstone project requires that students apply the knowledge and skills acquired during their MPH program to meet the needs of a stakeholder group or person. Some examples of needs (deliverables) include: an infographic, a website, a curriculum, a lesson plan, an app, an evaluation plan, a policy brief, etc. Some examples of stakeholders: include legislators, non-profit organizations, a faculty researcher, a government (county, state or federal) agency, etc. The project is very applied in nature and the result is a deliverable that can be used immediately by the stakeholder.

Prerequisite: Must have attended a capstone project orientation session; and must have completed or be concurrently enrolled in HLTH625, HLTH665, and HLTH710.

HLTH785 Internship in Public Health (3 Credits)

Internship and seminar providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the internship will depend upon the student's background and career goals.

Prerequisite: HLTH665, HLTH775, and HLTH780; or permission of SPHL-Behavioral & Community Health department.

Credit Only Granted for: HLTH785 or HLTH778.

HLTH786 Capstone Project in Public Health (2-3 Credits)

Capstone experience providing opportunity to apply knowledge and skills to a specific public health problem or issue. Completion of project relevant to public health under the direction of an advisor.

Prerequisite: Must have completed all required coursework; and permission of SPHL-Behavioral & Community Health department.

Restriction: Must be in a major within SPHL-Behavioral & Community Health department.

HLTH799 Master's Thesis Research (1-6 Credits)**HLTH898 Pre-Candidacy Research (1-8 Credits)****HLTH899 Doctoral Dissertation Research (1-8 Credits)**

IMMR - Immigration Studies

IMMR400 Vital Voices: Oral Histories of the Immigrant Experience (3 Credits)

An exploration of the dynamic subject of U.S. immigrant experience through the scope of individual immigrant life stories in a global context. Course will include an overview of U.S. and global immigration patterns and an introduction to the practice of oral history.

Recommended: HIST222; or IMMR200.

Credit Only Granted for: HIST428N, IMMR400, THET428I, or THET498V.

Formerly: HIST428N.

IMMR419 Special Topics in Immigration and Migration Studies (3 Credits)

Thematic exploration of a topic in immigration or migration studies history with emphasis on understanding how the movement of people is relevant in the contemporary world.

Repeatable to: 6 credits if content differs.

INFM - Information Management

INFM600 Information Environments (3 Credits)

An exploration of various models and methodologies used to capture and deploy internal and external information and knowledge in a number of settings; organizational analysis in terms of information creation, flow, sharing, conservation, and application to problem solving; internal and external influences on the management of information and knowledge; various information flows; information management in a variety of settings.

Restriction: Permission of INFO-College of Information Studies.

INFM603 Information Technology and Organizational Context (3 Credits)

Application of communication and information technologies to support work processes, including technology-enhanced communication networks, computer-supported collaborative work, decision-support systems, interactive systems, and systems analysis. Acquisition of information systems and their integration into the organization.

Restriction: Must not have completed LBSC671 or LBSC690; and permission of INFO-College of Information Studies.

INFM605 Users and Use Context (3 Credits)

Use of information by individuals. Nature of information. Information behavior and mental models. Characteristics of problems, task analysis, problem solving, and decision making. Methods for determining information behavior and user needs. Information access. Information technology as a tool in information use.

INFM612 Management Concepts and Principles for Information Professionals (3 Credits)

Key aspects of management - focusing on planning, organizing, leading and controlling. The evolution of management, innovative management for the changing world, management styles and leadership, managerial planning, goal setting and decision making. Ethical issues, designing adaptive organizations responding to change, global environment, diversity, and utilizing the appropriate technology to provide effective management of information programs and services.

Restriction: Permission of INFO-College of Information Studies.

INFM620 Introduction to Strategic Information Management (3 Credits)

Strategic management is the comprehensive collection of tasks, activities, and processes organizations use to coordinate and align resources and actions with its mission, vision, and strategy. Due to changes occurring in our global landscape, the integration of business and technology is compelling organizations to move beyond traditional, reactive, and silo-based data management approaches to a managed, predictive approach that treats information as a strategic asset and uses it to create business value. To meet challenges of this hyper-competitive environment, this course will provide you with an introduction to the strategic management of information assets for competitive differentiation and sustained business success.

Prerequisite: INFM612; or LBSC631; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INFM700 Information Architecture (3 Credits)

Principles and techniques of information organization and architecture for the Web environment. Structured description of digital resources, including data modeling techniques, metadata schemes, and user-oriented navigation systems.

Prerequisite: INFM603; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INFM711 Financial Management of Information Projects (3 Credits)

Techniques and strategies of planning and executing successful projects. Project budgets, work breakdown structures and scheduling techniques, earned value, tracking and reporting project costs, risk management, best practices, and cost/benefit analysis.

Prerequisite: INFM600; and must have completed or be concurrently enrolled in INFM612. Or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INFM714 Principles of Competitive Intelligence (3 Credits)

Intelligence process and how to build business advantage by the collection and analysis of the capabilities, vulnerabilities, market positioning and strategic planning of competitors using open source information.

Prerequisite: INFM600; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM714 or INFM718W.

Formerly: INFM718W.

INFM718 Selected Topics in Information Management (1-3 Credits)

Selected topics in information management.

Repeatable to: 9 credits if content differs.

INFM719 Independent Study (1-3 Credits)

Intensive individual study under faculty supervision.

Restriction: Permission of instructor; and must be in Information Management (Master's) program; and permission of INFO-College of Information Studies.

Repeatable to: 6 credits if content differs.

Additional Information: Faculty permission and Independent Study Contract required.

INFM732 Information Audits and Environmental Scans (3 Credits)

Methods and techniques to monitor organizational environment to identify opportunities and threats and relate them to the strengths and weaknesses of the organization to fulfill organization information needs and their sustainability. Information audit to determine the existing information environment by assessing the information needs of the organization, determining the information currently available. Application of information audits and environmental scans in strategic information management.

Prerequisite: INFM600; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM730, INFM731, or INFM732.

INFM735 Internship in Information Management (3 Credits)

Introduction to information management issues in the workplace, including the knowledge, skills, and experience necessary for success in high-impact information management positions. Securing and facilitating mentor relationships, and the development of actionable professional development plans.

Prerequisite: INFM600, INFM603, INFM605, and INFM612; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INFM736 Information Management Experience (3 Credits)

The Information Management Capstone Experience I and II are the culminating experience of the Master of Information Management program, taken in the students final two semesters. The capstone experience provide students with the opportunity to integrate and synthesize the knowledge and skills acquired throughout their MIM course work while working in a real world Information Management project. These courses must be taken in succession.

Prerequisite: INFM600; and INFM612; and INFM605; and INFM603. Or permission of instructor.

Restriction: Must be in Information Management (Master's) program; and permission of INFO-College of Information Studies.

INFM737 Information Management Capstone Experience (3 Credits)

The Information Management Capstone Experience I and II are the culminating experience of the Master of Information Management program, taken in the students final two semesters. The capstone experience provide students with the opportunity to integrate and synthesize the knowledge and skills acquired throughout their MIM course work while working in a real world Information Management project. These courses must be taken in succession.

Prerequisite: INFM736; and must have earned a minimum of 27 credits in the MIM Program. Or permission of instructor.

Restriction: Must be in Information Management (Master's) program; and permission of INFO-College of Information Studies.

INFM747 Web-Enabled Databases (3 Credits)

Basic methods and tools for developing dynamic, database-driven web sites. Acquiring, installing, and running web servers, database servers, and connectivity applications. Developing web interfaces and application-layer components.

Prerequisite: INFM603, LBSC690, or LBSC671; and INST733. Or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM747 or INFM718N.

Formerly: INFM718N.

INFM757 Organizational and Business Process Modeling (3 Credits)

General principles of modeling, including methods for modeling organizational and business process for information applications and strategy development. Approaches to evaluating models based on their accuracy and usefulness.

Prerequisite: Must have completed at least 9 credits in the College of Information Studies; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM718V OR INFM757.

Formerly: INFM718V.

INFM799 Master's Thesis Research (1-6 Credits)

Intensive individual research course under the supervision of a faculty member.

Prerequisite: INST701; or permission of instructor.

Restriction: Must be in Information Management (Master's) program; and permission of instructor; and permission of INFO-College of Information Studies.

Repeatable to: 9 credits.

INST - Information Studies

INST401 Design and Human Disability and Aging (3 Credits)

Focuses on the design of consumer products and information systems to enable their use by persons with a wider range of physical, sensory, and cognitive abilities. Overviews aging and major types of impairment as they relate to resulting problems using consumer products and information systems. Focuses on principles of design of mass market products.

Prerequisite: Minimum grade of C- from INST362 or INST367.

Restriction: Must be in Technology and Information Design or Information Science programs.

Credit Only Granted for: INST408B or INST401.

Formerly: INST408B.

INST402 Designing Patient-Centered Technologies (3 Credits)

Companies have created a vast array of apps and other technologies for understanding managing personal health and wellness, but many of them have been created with little understanding of audience needs or potential ethical issues. Course introduces students to the unique challenges of studying people's health and wellness needs as well as designing and evaluating technologies to meet those needs.

Prerequisite: Minimum grade of C- from INST362 or INST367.

Restriction: Must be in Technology and Information Design or Information Science programs.

INST403 Computational Journalism (3 Credits)

Designed to teach the application of computational methods in journalism and reporting. The methods include natural language processing, visualization, and web data mining. The course will also cover the necessity and impact of journalistic ethics in designing computation solutions.

Prerequisite: Permission of the Philip Merrill College of Journalism.

Cross-listed with: JOUR473.

Jointly offered with: JOUR773.

Credit Only Granted for: JOUR479V, JOUR473, INST408I or INST403.

Formerly: JOUR479V and INST408I.

INST405 Game Design (3 Credits)

Games are a structured form of play that are typically undertaken for recreational—but sometimes also educational and even professional—purposes. But what constitutes a successful game? In this course, you will learn the fundamentals of game design: applying elements and principles of game design, such as goals, rules, and challenges to create games, such as board games, card games, and digital games. You will be introduced to the basic tools and methods of game design: paper and digital prototyping, design iteration, design critique, and user testing. As part of the course, you will be designing several games of different types. You will also learn how to use your skills to deconstruct and critique the components of existing games, as well as gain an understanding of the role of the game designer in real-world game development teams.

Prerequisite: Minimum grade of C- in INST126, STAT100 or INST201; and minimum grade of C- from PSYC100 or SOCY105.

Restriction: Must be in the Information Science program or Technology and Information Design program.

Credit Only Granted for: INST408J or INST405.

Formerly: INST408J.

INST406 Cross Disciplinary Communication Lab (3 Credits)

Explores the world of communicating the ideas behind the things we make. In design, the product tends to be the prize: a manifestation of experience, sensibilities, and observations. But products do not always articulate a complete picture of what they are and how they came to be. Communication—speaking, writing, depicting, presenting to various audiences—is an under-leveraged component of design, connecting the product with emotion, process, context, and most importantly, the audience.

Prerequisite: Minimum grade of C- in INST380; and a minimum grade of C- in Professional Writing General Education requirement.

Restriction: Must be in the Technology and Information Design program.

INST407 Leading and Sustaining a Culture of Innovation (3 Credits)

Successful leaders know that the key to value creation and sustained growth lies in innovation -- continuously seeking opportunities to create value whether by launching new products and services, entering new markets, or rethinking key processes. This course will focus on the most efficient leadership strategies, change management, team motivation, technology team management for information management within organizations. We will examine some of the best ways to foster innovative behaviors within a team and organization. Students will engage with a course-long culture change challenge.

Restriction: Must be in Technology Innovation Leadership minor; or permission of INFO-College of Information Studies.

Credit Only Granted for: INST408L or INST407.

Formerly: INST408L.

INST408 Special Topics in Information Science (1-6 Credits)

Selected topics in information studies.

Prerequisite: Minimum of a C- from (STAT100, MATH115 or higher); minimum of a C- from (INST126 or GEOG276); minimum of a C- from (PSYC100, SOCY105, or BSOS233).

Restriction: Must be in Information Science, Technology and Information Design, or Social Data Science program.

Repeatable to: 9 credits if content differs.

INST410 Managing with Data and Simulations (3 Credits)

General principles of modeling, data analysis, and decision-making methods. Approaches to evaluating and assessing effective concepts, methods, and procedures of modeling and data analysis for decision making in management, advocacy, and communication situations. Ethical considerations in management, advocacy, and communication situations in professional life.

Prerequisite: Minimum grade of C- in INST126 and STAT100; minimum grade of C- in PSYC100 or SOCY105; minimum grade of C- in INST201 or INST301; and minimum grade of C- in MATH115 or higher.

Restriction: Must be in the Information Science or Technology and Information Design programs.

Credit Only Granted for: INST408M or INST410.

Formerly: INST408M.

INST414 Data Science Techniques (3 Credits)

An exploration of how to extract insights from large-scale datasets. The course will cover the complete analytical funnel from data extraction and cleaning to data analysis and insights interpretation and visualization. The data analysis component will focus on techniques in both supervised and unsupervised learning to extract information from datasets. Topics will include clustering, classification, and regression techniques. Through homework assignments, a project, exams and in-class activities, students will practice working with these techniques and tools to extract relevant information from structured and unstructured data.

Prerequisite: Minimum grade of C- in MATH115 (or higher) and STAT100; and a minimum grade of C- from INST126 or GEOG276; and a minimum grade of C- from one of the following (INST201, INST301, or BSOS233); and a minimum grade of C- from one of the following (AASP101, ANTH210, ANTH260, ECON200, ECON201, GEOG202, GVPT170, PSYC100, or SOCY100); and a minimum grade of C- from BSOS233 or INST314.

Recommended: Minimum C- in MATH140 and (INST326, BSOS326, or GEOG376).

Restriction: Must be in Information Science or Social Data Science program.

INST422 Modeling and Simulating Systemic Problems (3 Credits)

General principles of systems thinking and feedback dynamics modeling. Approaches, methods, and tools for identifying, articulating, and addressing non-linear, feedback-driven, systemic problems. Approaches to evaluating and assessing systems thinking and feedback dynamics models. Ethical considerations in systems thinking and feedback dynamics modeling practice.

Prerequisite: Minimum grade of a C- in INST201, STAT100, and INST126; and minimum of a C- in PSYC100 or SOCY105.

Restriction: Must be in the Information Science, Technology and Information Design, or Global Health major.

INST441 Information Ethics and Policy (3 Credits)

Explores via case studies the legal, ethical, and technological challenges in developing and implementing policies for managing digital assets and information. Emphasizes access questions pertinent to managing sensitive information and the roles and responsibilities of information professionals.

Prerequisite: Minimum grade of C- from INST341 or INST380.

Restriction: Must be in the Information Science program or Technology and Information Design program.

INST442 Digital Curation Across Disciplines (3 Credits)

Examines how to apply digital curation principles, tools, and strategies in managing diverse data collections and digital information in different disciplinary settings. Explores differences among data curation principles and practices across diverse settings, ranging from scientific organizations (such as business and academic research laboratories and computational science settings), to humanities-based institutions (such as cultural heritage organizations) to social science-based institutions (such as data-intensive professional environments).

Prerequisite: Must have completed with a C- or higher, or be concurrently enrolled in INST341 or INST380.

Restriction: Must be in the Information Science program or Technology and Information Design program.

INST443 Tools and Methods for Digital Curation (3 Credits)

Introduces students to the application of digital tools and methods in a variety of organizational settings, academic disciplines, and economic sectors.

Prerequisite: Must have completed with a minimum grade of C-, or be concurrently enrolled, in INST341 or INST380.

Restriction: Must be in the Information Science program or Technology and Information Design program.

INST447 Data Sources and Manipulation (3 Credits)

Examines approaches to locating, acquiring, manipulating, and disseminating data. Imperfection, biases, and other problems in data are examined, and methods for identifying and correcting such problems are introduced. The course covers other topics such as automated collection of large data sets, and extracting, transforming, and reformatting a variety of data and file types.

Prerequisite: Minimum grade of C- in STAT100 and INST327; and a minimum grade of C- from one of the following (INST201, INST301, BSOS233); and a minimum grade of C- from one of the following (AASP101, ANTH210, ANTH260, ECON200, ECON201, GEOG202, GVPT170, PSYC100, or SOCY100); and a minimum grade of C- from BSOS233 or INST314; and a minimum grade of C- from one of the following (BSOS331, GEOG273, or INST326).

Restriction: Must be in Information Science or Social Data Science program.

INST450 Introduction to CRM in Salesforce (3 Credits)

Students learn how to configure Salesforce so that they are able to collect, analyze and retrieve all of the vital information associated with their customer base. Moreover, students use Force.com fundamentals to understand Salesforce online application development and the deployment of next-generation cloud apps. The course offers practical hands-on learning that ensures students' job success as well as the theoretical knowledge needed to pass both Salesforce certification exams (ADM201 & Platform App Builder).

Prerequisite: INST327.

Credit Only Granted for: INST408P or INST450.

Formerly: INST408P.

INST451 Consumer Health Informatics (3 Credits)

Explores people's health-related information needs and whether, how, and why people seek out and use (or do not seek out and use) health information and the types of health information they find useful. We will also cover the important and interrelated topics of information avoidance, health behaviors, health literacy, digital health literacy, doctor-patient communication, and patient-to-patient communication through support groups and online communities. Throughout the course, we will also focus on the important concept of health justice - a world in which everyone has an adequate and equitable capability to be healthy.

Prerequisite: Minimum grade of C- in INST126, INST201 or STAT100; and minimum grade of C- from PSYC100 or SOCY105.

Restriction: Must be in the Information Science program or Technology and Information Design program.

Credit Only Granted for: INST408A or INST451.

Formerly: INST408A.

INST452 Health Data Analytics (3 Credits)

Health data analytics involves the extrapolation of actionable insights from patient data, using data sources such as electronic health records (EHRs), claims data, surveillance data, and surveys. Health data is complex, often unstructured and incomplete, and is organized for clinical care rather than to meet analytic needs. This course will involve the use of various analytical methods in order to translate large and complex data, whether structured or unstructured, into insights that improve decision-making from both the patient and provider perspectives.

Healthcare data are rich and hold so much potential, but a challenge is presented to patients, providers, and even government agencies when it comes to figuring out how to leverage these data. Students in this course will learn foundational topics in data analytics focused on health data and will apply this knowledge to real health datasets through hands-on labs integrated into the lectures.

Prerequisite: Minimum grade of C- in INST126 or GEOG276; and minimum grade of C- in PSYC100 or BSOS233; and minimum grade of C- in STAT100 or MATH115 or higher.

Restriction: Must be in the Information Science program or Social Data Science program.

INST453 Project Management for Information Science (3 Credits)

Provides a comprehensive overview of project management, focusing on the needs of information resources (IR). The course covers the concepts and techniques for planning and execution of projects including developing work breakdown structure, estimating costs, managing risks, scheduling, staff and resource allocation, team building, communication, tracking, control, and other aspects of successful project completion.

Credit Only Granted for: BMGT485, ENCE320, ENCE325, INST408O or INST453.

Formerly: INST408O.

INST454 Project Development Studio (3 Credits)

Allows students to develop a self-selected project or product, such as a game UI system or a task management app, while building advanced design skills. Students bring an initial idea to the class, and through lectures, discussions, weekly critiques, and project milestones, they progress their concepts into tangible, public-facing work. Emphasizing industry-standard methodologies, the course focuses on three core activities: externalizing ideas, engaging in constructive critique, and documenting design decisions and progress. This hands-on approach fosters self-directed learning, collaborative reflection, and a comprehensive understanding of design and development.

Prerequisite: Minimum grade of C- in INST104, INST126, INST204, and INST380; and must have completed or be concurrently enrolled in INST367.

Restriction: Must be in the Technology and Information Design program.

INST455 Information Assurance and Compliance (3 Credits)

Examines the protection of organizational data, personalized information, intellectual property and the associated assurance of the data's transfer, storage and communication. Students will understand how to manage these concerns and respond to both emergent and existing threats within the information domain. We will look at the key principles of Information Assurance, compliance and best practices in the real world.

Credit Only Granted for: INST408U or INST455.

Formerly: INST408U.

INST456 Risk Management Leadership in the Information Age (3 Credits)

Helps students assess and mitigate a range of vulnerabilities within an organization's data networks, allowing them to understand how to protect the integrity, security, and confidentiality of information.

Credit Only Granted for: INST408B or INST456.

Formerly: INST408B.

INST461 Emerging Technologies and Risk Management (3 Credits)

Focuses on how people and companies can achieve various tangible and intangible benefits and assess risk in using and incorporating emerging technologies (i.e. mobile devices, social media, robotic process automation, 3-D printing, cloud computing, blockchain technologies, artificial intelligence, etc.) into the activities and operations of a company.

Credit Only Granted for: INST408Z or INST461.

Formerly: INST408Z.

INST462 Introduction to Data Visualization (3 Credits)

Exploration of the theories, methods, and techniques of visualization of information, including the effects of human perception, the aesthetics of information design, the mechanics of visual display, and the semiotics of iconography.

Prerequisite: Minimum grade of C- in STAT100; minimum grade of a C- from one of the following (INST201, INST301, or BSOS233); minimum grade of C- in INST126 or GEOG276; a minimum grade of C- from one of the following (AASP101, ANTH210, ANTH260, ECON200, ECON201, GEOG202, GVPT170, PSYC100, SOCY100, or SOCY105); and a minimum grade of C- from BSOS233 or INST314.

Restriction: Must be in Information Science or Social Data Science program.

INST463 Technology Socialpreneur (3 Credits)

Introduces students to the role of technology and entrepreneurship in our society. Students will be able to choose an existing society issue and develop creative entrepreneurial ideas to solve it using innovative technologies. The course allows students to meet industry professionals and learn more about various social problems and projects companies focus on and try to solve in the modern world. Students are also able to contribute to those solutions.

Credit Only Granted for: INST398B or INST463.

Formerly: INST398B.

INST464 Decision Making for Cybersecurity (3 Credits)

Discusses human and organizational decision making from a variety of perspectives. Applies different risk assessment and decision making frameworks that are relevant to personal and organization cybersecurity, with a focus on the quantitative Factor Analysis of Information Risk (FAIR) model. Considers monetary, social and societal costs of cybersecurity decisions. Considers a range of questions relating to cybersecurity, from whether to install a game on a smartphone to how to allocate scarce information security resources in an organization.

Prerequisite: Must have earned a minimum grade of C- in INST201, INST126, MATH115, PSYC100, and INST364.

Restriction: Must be in Information Science program.

Credit Only Granted for: INST408W or INST464.

Formerly: INST408W.

INST466 Technology, Culture, and Society (3 Credits)

Individual, cultural, and societal outcomes associated with development of information & communication technologies (ICTs), including pro- and anti-social factors. Unpacking how gender, race, ethnicity, sexual orientation, disabilities, and political affiliations affect consumption and production of online experiences. Unpacking how structures of dominance, power and privilege manifest at individual, institutional and cultural levels.

Prerequisite: Minimum grade of C- in INST201 or INST301; and minimum grade of C- in PSYC100 or SOC105.

Restriction: Must be in the Information Science program or Technology and Information Design program.

INST467 Fundamentals of Cybersecurity for Policy Makers (3 Credits)

Explores the key issues facing policy makers attempting to manage the problem of cybersecurity from its technical foundations to the domestic and international policy considerations surrounding governance, response, critical infrastructure risk management, and privacy. Designed for students with little to no background in information technology, and will provide the principles to understand the current debates shaping a rapidly evolving security landscape.

Prerequisite: Must have completed with a C- or be concurrently enrolled in INST364.

Restriction: Must be in Information Science program.

Credit Only Granted for: INST408V, PLCY388C, or INST467.

Formerly: INST408V.

INST470 Competitive Business Intelligence (3 Credits)

Competitive intelligence (CI) is a derivative of governmental intelligence, as well as business marketing, economics, and management, that is defined similarly: the collection, evaluation, analysis, and application of legally available information relevant to the plans, decisions, and operations of one's organization. Topics will include an overview and comparison of the intelligence process in government and in business (i.e., the intelligence cycle), a detailed consideration of the requirements and the analytical segments of that process, a survey of current analytical tools, a survey of information sources and information acquisition activities, a survey of required personnel, physical and information security policies, and the necessary efforts in creating an effective CI unit within any business enterprise.

Credit Only Granted for: INST408K or INST470.

Formerly: INST408K.

INST490 Integrated Capstone for Information Science (3 Credits)

The capstone provides a platform for Information Science students where they can apply a subset of the concepts, methods, and tools they learn as part of the Information Science program to addressing an information problem or fulfilling an information need.

Prerequisite: Minimum grade of C- in INST311, INST314, INST326, INST327, INST335, INST346, INST352, and INST362.

Restriction: Must be in Information Science program; and must have earned a minimum of 90 credits; and permission of INFO-College of Information Studies.

INST600 Foundations for Librarians and Information Professionals (3 Credits)

An introduction to the field of library and information science (LIS), its history, and future direction that provides students with an understanding and appreciation of the nature and functions of the profession(s) they have entered. The focus is on core concepts underlying the LIS discipline, with particular emphasis on professional ethics/values, diversity, equity, inclusion and accessibility (DEIA), and the ways in which technology has shaped and continues to shape the field.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC791 or INST600.

Formerly: LBSC791.

INST603 Systems Analysis and Design (3 Credits)

Formal process for planning and designing an information technology system, including identifying users and other stakeholders, analyzing work processes, preparing system specifications, conducting feasibility and usability studies, and preparing for implementation. Approaches to analyzing system components and functions. Measurement and evaluation of system performance.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST603, LBSC603, or INFM613.

Formerly: INFM613

INST604 Introduction to Archives and Digital Curation (3 Credits)

Overview of the principles, practices, and applications in the archival and digital curation fields.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC604 or LBSC605.

INST607 Government Information (3 Credits)

An introduction to the nature and scope of government information (federal, state, and local). Tracing the ongoing efforts of government agencies to offer information, services, and resources online, this course also examines the nature and current impact of new technologies on participatory democracy. More specifically, the course explores information and communication technologies designed to make government more open and transparent; the design, implementation, and evaluation of new government and governance mechanisms, including through the use of social media and AI; the role of legal authorities and information institutions such as libraries in supporting access to government information; and the development and implementation of selected public facing online tools (e.g., data visualization, crowd-sourcing, etc.).

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM718E, INST607, or LBSC708E.

Formerly: INFM718E and LBSC708E.

INST608 Special Topics in Information Studies (1-3 Credits)

Covers special topics in information studies.

Repeatable to: 6 credits if content differs.

INST610 Information Ethics (3 Credits)

Investigation of the diverse range of ethical challenges facing society in the information age. Ethical theories, including non-Western and feminist theories. Application of theories to information ethics issues.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM718Q, INST610, or LBSC708I.

Formerly: INFM718Q and LBSC708I.

INST611 Privacy and Security in a Networked World (3 Credits)

Evolving conceptualization of privacy and security issues in light of technological developments in the 21st century. Analysis of legal, ethical, design, and socially constructed challenges that organizations and individuals face when developing privacy and security solutions.

Restriction: Permission of INFO-College of Information Studies.

INST612 Information Policy (3 Credits)

Nature, structure, development and application of information policy. Interactions of social objectives, stakeholders, technology and other forces that shape policy decisions.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST612 or LBSC625.

Formerly: LBSC625.

INST613 Information and Human Rights (3 Credits)

An examination of information as a human right, including topics: social, cultural, economic, legal, and political forces shaping information rights; the impact of information rights on information professions, standards, and cultural institutions; and information rights and disadvantaged populations.

Restriction: Permission of INFO-College of Information Studies.

INST614 Literacy and Inclusion (3 Credits)

The educational and psychological dimensions of helping and supporting new users to become information literate and experienced users to remain engaged.

Restriction: Permission of INFO-College of Information Studies.

INST615 Information Professionals and the Law (3 Credits)

An exploration of the interrelated issues of the provision of and information literacy about legal information by information organizations and the impacts of legal issues, such as privacy and filtering, on the practice of information organizations that serve the public.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC735 OR INST615.

Formerly: LBSC735.

INST616 Open Source Intelligence (3 Credits)

An introduction to Open Source Intelligence (OSINT) for Information Professionals. For the purposes of this course, OSINT is defined as the use of free, publicly available online sources to gather information about people, organizations/groups, places, businesses, activities/events, and capabilities. Collected information is used to conduct analysis or reach conclusions with estimated level of certainty. Students will learn basic and advanced techniques for using search engines, people directories, social networks, location-based services, images and videos, public records, domain analytics, documents, archives, and other sources. Throughout the modules, data quality and validation procedures will be key topics. Professional applications of the skills taught are extensive and include libraries, law offices, journalism, human resources, competitive intelligence, law enforcement, opposition research, government agencies, ethical hacking, and many more.

Restriction: Permission of INFO-College of Information Studies.

INST617 Computational Journalism (3 Credits)

Designed to teach the application of computational methods in journalism and reporting. The methods include natural language processing, visualization, and web data mining. The course will also cover the necessity and impact of journalistic ethics in designing computation solutions.

Prerequisite: Permission of the Philip Merrill College of Journalism.

Cross-listed with: JOUR773.

Jointly offered with: JOUR473.

Credit Only Granted for: JOUR779V, JOUR773, JOUR473, JOUR479V, INST617, INST408I, or INST403.

Formerly: JOUR779V.

INST620 Diverse Populations, Inclusion, and Information (3 Credits)

Importance of equality of information access. Social, political, and technological barriers to information. Information needs of diverse and underrepresented populations. Principles of inclusive information services.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC620 OR INST620.

Formerly: LBSC620.

INST621 Managing Digital Innovations in Organizations (3 Credits)

Students will learn the main theoretical perspectives on managing digital innovations, become familiar with current best practices of innovating with IT, and develop innovation skills in various organizational settings such as project teams, functional departments, organizations, communities, and society at large.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM718Z or INST621.

Formerly: INFM 718Z.

INST622 Information and Universal Usability (3 Credits)

Information services and technologies to provide equal experiences and outcomes to all users. Laws, standards, approaches, component concepts, access needs, and technologies in relation to physical and online information environments.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC622 OR INST622.

Formerly: LBSC622.

INST626 CSS/HTML Basics (3 Credits)

Learn the introductory steps of building a static website using HTML and CSS. The course will introduce students to web architecture such as client-server architecture and the three tier model. The course will also briefly cover the topics of web protocol such as HTTP/HTTPS, FTP.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST728J or INST626.

Formerly: INST728J.

INST627 Data Analytics for Information Professionals (3 Credits)

Skills and knowledge needed to craft datasets, perform quantitative and qualitative analyses, and develop information resources that bridge the gap between raw data and decision makers' needs.

Restriction: Permission of INFO-College of Information Studies.

INST630 Programming Human-Centered Interfaces (3 Credits)

An introduction to the development and programming of user interfaces intended for students interested in human-computer interaction. Topics include fundamentals of programming, history and current trends in user interface implementation that are relevant to information professionals.

Restriction: Permission of INFO-College of Information Studies.

INST632 Human-Computer Interaction Design Methods (3 Credits)

Methods of user-centered design, including task analysis, low-tech prototyping, user interviews, usability testing, participatory design, and focus groups.

Prerequisite: LBSC671, INFM603, or INST631; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST633 Analyzing Social Networks and Social Media (3 Credits)

Introduces students to the science and social science of network analysis. Through real world examples, including analysis of their own social networks, students will develop skills for describing and understanding the patterns and usage of services like Facebook, Twitter, YouTube, and others. Students will read classic and cutting edge articles and books about these topics and discuss their applicability to this new social media. The class will culminate with a capstone project in which students will apply the analysis methods they have learned to understanding a particular question about social networks and social media.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC708L or INST633.

Formerly: LBSC708L.

INST638 HCI Professional Preparation Seminar (1 Credit)

The human-computer interaction area is huge and diverse, yet all HCI professionals will face a common set of challenges upon embarking into their future careers, including job hunting, interviewing, joining a team, managing group dynamics, and staying abreast of current technology. Students will learn how to tackle these challenges from a series of speakers familiar with current industry practice.

Repeatable to: 3 credits if content differs.

INST639 Practical Skills in HCI (1-3 Credits)

Current industry practice in the HCI and UX field involves being familiar with many practical skills and specialized software. In this repeatable course, HCIM students will be able to acquire some of these vital practical skills in order to be better prepared for joining industry upon graduation. Furthermore, this will also be an opportunity for students to develop their portfolio for future job hunts. Offered in both Fall and Spring semesters, the intention is for these "practical skills" to be taught by professional instructors with expert knowledge. The content of the course will vary from semester to semester, but here is a sample of topics: Graphic and visual design and communication; UX design and research in games; Voice and gestures; UX mockups and wireframing tools; Practical web design and technologies; UX project management software.

Repeatable to: 9 credits if content differs.

INST640 Principles of Digital Curation (3 Credits)

Principles for the design and implementation of long-term curation of digital data and information assets, including born-digital and digitized assets. Frameworks for analysis of technical, practical, economic, legal, social and political factors affecting digital curation decisions. Case studies of specific digital curation scenarios.

Restriction: Permission of INFO-College of Information Studies.

INST641 Policy and Ethics in Digital Curation (3 Credits)

Discussion of strategies to address intellectual property, privacy, security and other policy and ethics concerns raised by the curation of digital records and data.

Prerequisite: INST604; or INST640; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST643 Curation in Cultural Institutions (3 Credits)

An overview of the principles, practices, and current debates in the management, care and representation of digital artifacts in libraries, archives, and museums.

Restriction: Permission of INFO-College of Information Studies.

INST644 Introduction to Digital Humanities (3 Credits)

A survey of the history, methods, and principal topics of the Digital Humanities, examined from theoretical and applied perspectives.

Restriction: Permission of INFO-College of Information Studies.

INST645 Personal Digital Curation (3 Credits)

Discussion and workshop in selecting and preserving digital personal data and records.

Restriction: Permission of INFO-College of Information Studies.

INST646 Principles of Records and Information Management (3 Credits)

Principles and practices of managing records in the context of information management programs in government, corporate and other institutional settings. Includes access; legal requirements; digital technologies; and creation, administration, appraisal, and retention and disposition of records.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC680 OR INST646.

Formerly: LBSC680.

INST647 Management of Electronic Records & Information (3 Credits)

Focuses on the life cycle of records and the impact of technology programs for managing electronic records. Explores the roles of records managers in the management of electronic records.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC682 OR INST647.

Formerly: LBSC682.

INST650 Facilitating Youth Learning in Formal and Informal Environments (3 Credits)

The historical, organizational, and contemporary contexts of formal and informal learning spaces; the principles of teaching, learning, and information literacy that underlie the formal and informal learning spaces; and the leadership role that information professionals can play within their schools, libraries and communities.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST650 or LBSC640.

Formerly: LBSC640.

INST651 Promoting Rich Learning with Technology (3 Credits)

Exploration of how technology can be used to promote rich learning experiences, with a particular focus on youth populations. Assessment of the how, when, and why of infusing technology into the teaching and learning process.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST651 or LBSC642.

Formerly: LBSC642.

INST652 Design Thinking and Youth (3 Credits)

Methods of design thinking specifically within and for youth contexts, including user-centered design, understanding user needs, ideation, contextual design, participatory design, iterative prototyping, and visual design. These topics will specifically be studied in the context of designing with and for youth.

Restriction: Permission of INFO-College of Information Studies.

INST653 Introduction to Museum Scholarship (3 Credits)

Provides students a basic understanding of museums as cultural and intellectual institutions. Topics include the historical development of museums, museums as resources for scholarly study, and the museum exhibition as medium for presentation of scholarship.

Cross-listed with: AMST655, ANTH655, HIST610.

Credit Only Granted for: AMST655, ANTH655, HIST610, INST728T or INST653.

INST660 Strategic Leadership (3 Credits)

Students will use research and best practices to act and think like a leader, increase your self-awareness, and learn how to unlock potential in others. From the stories of great leaders and everyday people, you will learn and practice empowerment, accountability, courage, creativity, and humility, which are the key leadership skills. In addition, this course will teach you how to create new opportunities and lasting impact to drive growth and value creation in your organization.

Prerequisite: INFM612; or LBSC631; or LBSC635; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST660, LBSC708F or INFM718F.

Formerly: LBSC708F, INFM718F.

INST661 Introduction to Game, Entertainment, and Media Analytics (3 Credits)

With the continuing global growth in the Game, Entertainment, and virtual/augmented reality and immersive experiences industries, entertainment providers increasingly depend on data analytics to maintain a competitive edge while continuing to improve the customer experience. This course provides an overview of the Game, Entertainment, and Media (GEM) industries, discuss the relationships between the entertainment providers and the entertainment consumers, and explore the analytical techniques used to maximize the overall value to both the providers and consumers. The course will focus on the uses of analytics methods such as personalization, recommendation, clustering and segmentation, behavioral analytics, etc., will discuss core data management and data architecture concerns, and examine how big data infrastructure can support scalability as data volumes grow and as streaming speeds accelerate. In addition we review socio-technical aspects of entertainment, especially in the areas of cyberpsychology, social networks, and information policy concerns such as privacy protection, fraud, equity, and national security concerns.

Prerequisite: Permission of the instructor.

INST670 Introduction to Javascript Programming (1 Credit)

Introduction to the fundamentals of Javascript programming. Basic components of all programming languages, including variables, types, data structures, and control flow, with a focus on leveraging Javascript libraries for more advanced functionality. No prior experience needed.

Credit Only Granted for: INST728N and INST670.

Formerly: INST728N.

INST671 Introduction to Web Programming (1 Credit)

Introduction to the fundamentals of designing and programming web sites. HTML programming extended by work with Cascading Style Sheets. Programming skills are complemented with fundamentals of design and usability. No prior programming experience needed.

Credit Only Granted for: INST728W or INST671.

Formerly: INST728W.

INST673 Hands On Machine Learning with Weka (1 Credit)

Students will receive hands on experience with the open-source machine learning tool Weka. Topics covered will be classification, regression, basic algorithm types, how to get data into a format Weka can process, how to interpret results, and basic document classification. The class will meet online.

Recommended: It is recommended that students have some familiarity with programming prior to taking this course.

Restriction: Permission of INFO-College of Information Studies.

INST680 Health Informatics (3 Credits)

An introduction to the ways in which medical data, information, and knowledge are created, stored and used. Students will gain an understanding of the current trends in the delivery of medical care and the ways in which these trends influence health information resources and systems.

Prerequisite: Must have completed or be concurrently enrolled in INFM600 or LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST680 or INST728F.

Formerly: INST728F.

INST681 Health Information Behavior (3 Credits)

Exploration of information needs of healthcare professionals and the general public, as well as how they seek information to fulfill these information needs, impacts and outcomes of health-related information-seeking by multiple populations. Examination of models and theories and empirical studies of patient and healthcare professional information behavior.

Prerequisite: INFM600; or LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST682 Personal Health Informatics & Visualization (3 Credits)

Personal Health Informatics cover a broad concept that encompasses an array of approaches to collect, store, share, analyze, and reflect on personal health data. Not only health care providers are relying on Health Technologies to improve patient care, people are increasingly using health devices and apps in their everyday life. Individuals have started using new technologies to collect data, increase awareness, and reflect on and change their behaviors. They also use various tools for curiosity and fun. This course will provide an overview of this exciting field and examine how social and behavioral theories can be applied to create effective health applications. It is difficult to create health technologies that can successfully be integrated into people's daily life due to many obstacles in individuals' data collection, integration, self-reflection, and sharing practices. Understanding these challenges is an important part of designing Health Technologies. Therefore, this course will cover HCI and design thinking methods that you can leverage in understanding the adoption of Health Technologies. Moreover, visualizations facilitate people to gain insights from their data, so we will cover common visualization approaches used in the personal data contexts.

INST701 Introduction to Research Methods (3 Credits)

Techniques and strategies of research as applied to the definition, investigation, and evaluation of information problems. Qualitative, quantitative, and mixed methods of research design methods are considered from the aspects of implementation, analysis, and interpretation.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC701, INFM718M or INST701.

Formerly: LBSC701, INFM718M.

INST702 Advanced Usability Testing (3 Credits)

Usability test design, implementation and analysis for computer and mobile devices; special attention will be paid to remote testing. Students will learn the complex process of coordinating and facilitating a usability test and how to synthesize test data into reports appropriate for various audiences.

Prerequisite: Permission of instructor; or (INFM605 or INST631).

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM702 or INST702.

Formerly: INFM702.

INST703 Visual Design Studio (3 Credits)

This hands-on studio course will help students develop foundational visual skills related to user experience (UX) design. Students will explore methodologies and processes used in many of the industry's top creative environments and study the entire visual design skillset, including concept development, content creation, system design, and tools and process.

Restriction: Must be in the Human-Computer Interaction Master's program.

Credit Only Granted for: INST728T or INST703.

Formerly: INST728T.

INST704 Inclusive Design in HCI (3 Credits)

An introduction to inclusive technology design, that is, the design and evaluation of user interfaces for diverse users and use contexts. Building on basic concepts in human-computer interaction, students will learn about design exclusion and barriers to use, and methods by which these can be overcome. Assistive input and output technologies will also be covered. Populations include older adults, users with visual, cognitive or motor impairments, users who are deaf or hard of hearing, children, users in low resource contexts, and users in mobile contexts. Research trends and practical design considerations (e.g., web accessibility requirements) will be covered. Students will interact with the material through readings, discussion, and individual and group assignments.

Prerequisite: INST631; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST728Z OR INST704.

Formerly: INST728Z.

INST705 Game Design Studio (3 Credits)

Learn the fundamentals of game design by applying elements and principles of game design, such as goals, rules, and challenges, to create board games, card games, and digital games. Students will be introduced to the basic tools and methods of game design: paper and digital prototyping, design iteration, design critique, and user testing. Students will design several games of different types to add to a growing portfolio of game design concepts. Students will also learn how to use their skills to deconstruct and critique the components of existing games, as well as gain an understanding of the role of the game designer in real-world game development teams.

Recommended: Programming experience will be useful, but not strictly necessary.

Credit Only Granted for: INST408J, INST608J or INST705.

Formerly: INST608J.

INST706 Project Management (3 Credits)

Comprehensive overview of project management, focusing on the needs of information resource (IR) projects. Concepts and techniques for planning and execution of projects including developing work breakdown structure, estimating costs, managing risks, scheduling, staff and resource allocation, team building, communication, monitoring, control, and other aspects of successful project completion.

Prerequisite: INFM603 and INFM612; or (LBSC631 and LBSC671); or (LBSC635 and LBSC670); or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST706 or INFM706.

Formerly: INFM706.

INST709 Independent Study (1-3 Credits)

Intensive individual study, reading, or research in an area of specialized interest under faculty supervision. Registration limited to the advanced student with the approval of the advisor and of the faculty member involved.

Prerequisite: Completion of all core courses.

Restriction: Permission of INFO-College of Information Studies; and permission of instructor.

Repeatable to: 9 credits.

Additional Information: A student may complete no more than 9 credits registered under 709 or a total of 12 credits registered under 708 and 709.

INST710 User Experience Research Methods (3 Credits)

Students will learn to conduct user research in industry and to provide foundational knowledge needed for academic research. It examines the theoretical and epistemological differences between research paradigms and provides an overview of qualitative, quantitative and mixed-method approaches. It overviews user-centered design (UCD) methods, and uses Contextual Inquiry/Contextual Design as the backbone for a research project, incorporating related formative UCD methods and techniques. It is a project-based course, where students conduct a semester-long project to prepare them for the HCIM Capstone as well as other types of formative user research.

INST711 Interaction Design Studio (3 Credits)

Covers basic interaction design principles and design process from a studio-based design perspective. Focuses on how to design for interactions that will resonate with your audiences: how the features and functions of a project get translated into something people find usable, useful, and desirable. Explores the role of interaction designers. Students design and prototype interactive products, systems, and services.

INST713 Futures of Work (3 Credits)

Are robots taking our jobs? Are there any jobs even worth taking? What other futures of work might we build? This course examines these questions by focusing on the labor process of computer-supported collaborative work (CSCW) in domains ranging from transportation to software development to sex work, drawing on research and theory from sociology, organizational studies, HCI, and more. Design-oriented students will be encouraged to develop interventions to enhance not just productivity but autonomy and democracy. Research-oriented students will learn to study workplaces and situate shopfloor developments in global political economy.

Credit Only Granted for: INST728Y or INST713.

Formerly: INST728Y.

INST714 Information for Decision-Making (3 Credits)

The use of information in organizational and individual decision-making. An examination of managers' behavior in using information; differences between the private and public sectors; and the roles of information professionals and information systems in decision-making.

Prerequisite: LBSC631 or INFM612; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM718A, INST714 or LBSC705.

Formerly: INFM718A and LBSC705.

INST715 Knowledge Management (3 Credits)

Nature, creation, acquisition, and use of knowledge. Strategic role of knowledge in organizations and institutions. Information and knowledge ecology. Structure and functions of knowledge management systems and the role of the Internet and intranets. Knowledge as intellectual capital. Roles of librarians and information professionals in the knowledge economy. Strategic issues and future trends.

Prerequisite: INFM600 or LBSC671; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST715 or LBSC715.

Formerly: LBSC715.

INST716 Information, Technology, and Society (3 Credits)

An exploration of the mutually constitutive relationship between information technology (IT) and society, including how IT transforms society and how society transforms IT.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST716, LBSC708T, or INFM718T.

Formerly: LBSC708T and INFM718T.

INST717 Internship Practicum in Human-Computer Interactions (3 Credits)

Required, supervised experience working in an industry, government, non-profit organization or an educational institution to address a problem in Human-Computer Interaction. Students will spend a minimum of 120 hours working in the agency during the internship.

Prerequisite: INST631 and INST632.

Recommended: INST701.

Restriction: Permission of INFO-College of Information Studies; and must be in Human-Computer Interaction (Master's) program.

INST725 Legal Research for Information Professionals (3 Credits)

An in-depth exploration the methods, resources, and context of conducting advanced legal research. After offering an overview of various types of legal materials, the course will focus on finding and analyzing legal materials through various primary sources, databases, secondary sources, and public records for government and corporate settings. The course will also discuss practical issues of conducting legal research, such as data management and budgeting.

Prerequisite: INST615.

Restriction: Permission of INFO-College of Information Studies.

INST726 Information Governance (3 Credits)

Offers a comprehensive introduction to information governance, an emerging discipline concerned with how organizations minimize risk and maximize the value associated with their information assets. Drawing from real-life examples from the private and public sectors, the course will explore important facets of information governance, including how institutions incorporate best practices in records and information management, data storage and archiving, e-discovery, privacy, cybersecurity, analytics, risk management, and compliance. The course will also provide practical lessons in developing a state-of-the-art information governance program.

INST727 Information Institutions Roles and Responses during Crises (3 Credits)

By embracing a preparation lens, examine the roles and responses that information institutions can play before, during, and after crises (defined broadly). Engage in the processes of design, execution, reflection, iteration, and evaluation of the agile and dynamic structures needed to respond to crises. Acquire the knowledge, skills, and mindsets necessary to serve communities in times of crisis. Given that new crises are constantly emerging, this course will weave in tried-and-true examples of essential tasks that need to be executed before, during, and after crises; reflective exercises to measure readiness and gauge the effectiveness of approaches; assessments to evaluate the achievement of intended outcomes; and guidance for information institution staff and administrators that emphasizes comfort with ambivalence, uncertainty, and imperfection.

Credit Only Granted for: LBSC708X or INST727.

Formerly: LBSC708X.

INST728 Special Topics in Information Studies (1-3 Credits)

Selected topics in information studies.

Restriction: Permission of INFO-College of Information Studies.

Repeatable to: 9 credits if content differs.

INST729 International Opportunities in Information Studies (3 Credits)

Short term, experiential course offered in conjunction with the University's Study Abroad Office, to volunteer, complete a project, or conduct research in a library or information organization outside the U.S. Focus and location varies.

Prerequisite: Permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Formerly: LBSC708S and LBSC729.

INST730 Games as Emergent Experiences (3 Credits)

Videogames are designed objects that players bring their own history to, resulting each time in a unique emergent experience. If you've ever wondered why you love a certain game but others hate it, why you prefer one genre of game over another, or why the frustration you feel in complicated games is often actually enjoyable, this is the class for you! We will examine design principles instantiated in various games, analyze how failure and feedback support productive gameplay, discuss how mechanics and aesthetics contribute to emergent experiences, and develop an understanding of the field of games scholarship.

Credit Only Granted for: INST608K, INST408K or INST730.

Formerly: INST608K.

INST731 Advanced Game, Entertainment, and Media Analytics (3 Credits)

Analytical techniques and research methods are on the rise in gaming, entertainment, and media (GEM) industries. Students will expand their critical thinking skills, explore the current state of GEM analytics, summarize data creatively, improve data-driven decision making, and optimize reporting in real-world situations. This course will assist students in applying and developing advanced analytical skills specifically designed for gaming, entertainment, and media analytics in their individual areas of interest. Students will achieve this through the development of critical thinking skills as well as advanced demonstration of skills and knowledge in various data science techniques and analytical methods, such as modeling, database management, information workflow analysis, usability research, statistical analysis, predictive analytics, natural language processing (NLP), data mining, and machine learning techniques.

Prerequisite: INST661.

Credit Only Granted for: INST728Z or INST731.

Formerly: INST728Z.

INST732 Entertainment Theory (3 Credits)

An entertainment environment is a setting in which audiences interact with content developed to please, charm, cheer, interest, engage, and enthrall distinct individuals and groups. Entertainment environments surround us in all parts of our lives-this course aims to dissect them using a foundation of entertainment theory, including a set of models and theories examining motivations for entertainment consumption; selection of content; processing of content; evaluation of content; and cognitive, attitudinal, and behavioral effects of content.

INST733 Database Design (3 Credits)

Principles of user-oriented database design. Requirements analysis. Data modelling. Data integrity and security and multi-user databases. Implementing an information system using a database management system (DBMS).

Prerequisite: LBSC690, LBSC671, or INFM603; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST733 or LBSC793.

Formerly: LBSC793.

INST734 Information Retrieval Systems (3 Credits)

Principles of organizing and providing access to information using automated information storage and retrieval systems. Retrieval systems models, index language selection, data structure, user interfaces, and evaluation for text and multimedia applications.

Prerequisite: LBSC671 or INFM603; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST734 or LBSC796.

Formerly: LBSC796.

INST735 Natural Language Processing (3 Credits)

Introduce fundamental concepts, techniques, and algorithms for the computational handling of natural language. Statistical and machine learning techniques, models, and algorithms that enable computers to deal with the ambiguity and implicit structure of human language. Approaches that focus on uncovering linguistic structure, such as syntactic or semantic parsing, as well as those that focus on manipulating text in useful ways, such as question answering or machine translation.

Prerequisite: Minimum grade of C- in CMSC422; and permission of CMNS-Computer Science department.

Cross-listed with: CMSC723, LING723.

Credit Only Granted for: CMSC723, LING723, or INST735.

Additional Information: CMSC students may only receive PhD Comp. credit for CMSC723 or CMSC823, not both.

INST736 Computational Linguistics II (3 Credits)

Natural language processing with a focus on corpus-based statistical techniques. Topics include: stochastic language modeling, smoothing, noisy channel models, probabilistic grammars and parsing; lexical acquisition, similarity-based methods, word sense disambiguation, statistical methods in NLP applications; system evaluation.

Prerequisite: LING723, CMSC723, or INST735; or permission of instructor. Cross-listed with CMSC773, LING773.

Credit Only Granted for: CMSC773, LING773, or INST736.

Additional Information: CMSC students may only receive PhD Comp. credit for CMSC723 or CMSC823, not both.

INST737 Introduction to Data Science (3 Credits)

An exploration of some of the best and most general approaches to get the most information out of data through clustering, classification, and regression techniques.

Prerequisite: INST627 and (LBSC690, LBSC671, INFM603, or JOUR652).

Restriction: Permission of INFO-College of Information Studies.

INST741 Social Computing Technologies and Applications (3 Credits)

Tools and techniques for developing and configuring social computing applications. Theories and paradigms for social computing. Strengths and limitations of different application styles and types. Evolution of applications as responses to social computing challenges. Information and organizational systems co-development.

Prerequisite: INFM603 and INFM605; or (LBSC602 and LBSC671); or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM741 or INST741.

Formerly: INFM741.

INST742 Implementing Digital Curation (3 Credits)

Management of and technology for application of digital curation principles in specific settings. Characteristics, representation, conversion, and preservation of digital objects. Application of standards for digitization, description, and preservation. Planning for sustainability, risk mitigation and disaster recovery.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST744 Solving Problems in Digital Curation - Capstone Course (3 Credits)

Project-based course that applies digital curation principles and techniques first-hand in an institutional program setting. The focus is on a well-defined project that constitutes a learning experience and also permits the student to contribute to the ongoing work of the host institution. The project must address one or more aspects of digital curation: design and implementation for long-term digital curation of a discrete collection; application of technologies and standards for digitization, description, and preservation of digital assets; or implementation of strategies to provide access to a digital collection.

Restriction: Must be enrolled in the Curation and Management of Digital Assets (CMDA) Certificate.

INST745 Introduction to Digital Arts Curation (3 Credits)

Representation and curation of art artifacts through digital media, with a focus on how to collect and manage born-digital artifacts, digitized artifacts, and their related data and metadata.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST746 Digitization of Legacy Holdings (3 Credits)

Through hands on exercises and real-world projects, students will learn how to incorporate digitization of analog holdings into an existing archival program and how to link records of different formats and from different collections together.

Prerequisite: INST604.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST728B or INST746.

Formerly: INST728B.

INST747 Research in Advanced Digital Curation (3 Credits)

Students will build their ability to understand the complexity of research strategies and apply tools involved in the management and use of digital information in the Age of Big Data. The class will contain class lectures, class discussions, assigned readings, and extensive hands-on experience with student experience in digital curation projects.

The research projects are focused around six major themes that will engage students in multiple arenas of research in Big Data. These are: community displacement, refugee narratives, movement of people, citizen internment, racial zoning, and cyberinfrastructure for digital curation. Project participants will have the opportunity to work with external stakeholders.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST728L or INST747.

Formerly: INST728L.

INST750 Advanced Data Science (3 Credits)

Application of data science techniques to unstructured, real-world datasets including social media and geo-referenced sources. Techniques and approaches to extract information relevant for experts and non-experts in areas that include smart cities, public health, and disaster management.

Prerequisite: INFM603 and INST737; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INFM750 OR INST750.

Formerly: INFM750.

INST751 IoT and Streaming Data Analytics (3 Credits)

An increasing number of sensors, actuators, Internet-connect instruments and apparatuses, smart devices, and systems are generating and broadcasting a wide variety of continuous data streams. Machine-generated structured data sources are joined by a myriad of unstructured data streams from social media, weather, and news sources, among others. Integrated into networks, these continuously-streaming devices (collectively referred to as the Internet of Things, or IoT) provide a fertile array of data sources that can be ingested and analyzed to inform and automate decision processes for numerous purposes including operational intelligence, process monitoring, optimization, risk management, personalization, and prediction in real time. This course looks at architectures and operational modes for streaming data sources and examine methods for descriptive analytics, creation of predictive models, and integrated deployment of these models via centralized and edge computing resources. We will discuss a variety of uses cases for streaming data analytics and how they are applied in different industries including public utilities, smart cities, manufacturing, telecommunications, and healthcare.

Prerequisite: INFM603, INST733, or other programming and database courses, or Permission of the instructor.

INST752 Location Intelligence (3 Credits)

Provides a comprehensive overview of the principles of geographic information systems and location analytics for a variety of business scenarios. Explores the processes for integrating location information, maps, and demographic information with business information and implementing analytical applications. Reviews business contexts such as government and citizen analysis, zoning and planning, retail site selection, supply chain management and logistics, fieldservice planning and tracking, real estate, insurance, public safety, municipal maintenance, and others. Provides hands-on opportunities to apply location intelligence methods.

Prerequisite: INFM600, INFM603, INST630, and INST733; or permission of INFO-College of Information Studies.

INST753 Data Governance and Data Quality (3 Credits)

Surveys the methods and practices for understanding the relationship between organizational performance objectives and their effective oversight, use, and management of information. Examines methods for instituting information governance, data governance, and data quality in the context of information policies for assessing information risk, observing data policies, and enforcing accountability for protection of sensitive information. Explores models of data ownership and accountability, roles and responsibilities for data governance and data stewardship, and processes for soliciting and documenting information and data requirements. Covers techniques for data quality assessment, specification of data quality rules, and applications for validating compliance with data quality expectations, monitoring levels of data quality, and notifications and dashboards for monitoring data compliance.

Prerequisite: INFM600, INFM603, and INST733; or permission of INFO-College of Information Studies.

INST754 Data Integration and Preparation for Analytics (3 Credits)

Provides a comprehensive overview of the end-to-end processes for acquiring, ingesting, managing, cleansing, transforming and integrating data sources for the purposes of reporting and analytics. Concepts include data acquisition, data streaming, data staging, standardization, data quality, concept and metadata harmonization, transformation, and data modeling. Students will learn how ingested data sets can be transformed, integrated, and prepared for analytical use.

Prerequisite: INFM600, INST630, and INST733; and (INFM603 or JOUR652) ; or permission of INFO-College of Information Studies.

INST755 eGovernment for Smart Cities (3 Credits)

Federal, state, and local government entities are increasingly communicating, interacting, and providing services digitally in an online and networked environment. Concurrently, urban planners and administrators seek to leverage the potential of rapidly evolving technologies to transform service provisioning for the efficient management of assets and resources, with the goal of creating sustainable, livable, innovative, and economically vibrant cities and communities. This course will examine the intersection of these two developments and provide a framework for understanding the technical, policy, and information management issues that are emerging.

INST756 Information Risk Management (3 Credits)

Looks at information system threats, vulnerabilities, risk assessment and management. Explores how regulations scope and define what is considered to be protected information. Considers how data assets are assessed and classified in terms of their levels of sensitivity. Discusses specifying data protection policies and the techniques for enforcing compliance with those policies.

Prerequisite: INFM600; or permission of INFO-College of Information Studies.

INST760 Data Visualization (3 Credits)

Introduction to the science and technology of data visualization—the graphical representation of data to aid understanding—and includes both theoretical foundations as well as practical applications of integrated visualization techniques on real-world problems. Application of these techniques to state-of-the-art problem domains within research, society, and industry.

Prerequisite: INST630; or INFM603; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST760 or INST728V.

Formerly: INST728V.

INST762 Visual Analytics (3 Credits)

Visual analytics is the use of interactive visual interfaces to facilitate analytical reasoning. In essence, visual analytics is based on the—not uncontroversial—idea that humans and computers working alone are insufficient for the data challenges of today and tomorrow, and that effective synthesis of both humans and computational algorithms are needed to create human-in-the-loop systems. Thus, visual analytics bridges human-centered disciplines such as visualization and human-computer interaction with computation-centered disciplines such as machine learning, probabilistic methods, and knowledge discovery. The course contents will include both theoretical foundations of this interdisciplinary science as well as practical applications of integrated visual analysis techniques on real-world problems.

Prerequisite: INFM603, INST630, or JOUR652; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: INST728Q OR INST762.

Formerly: INST728Q.

INST764 Data Literacy for Arts and Entertainment Management (3 Credits)

This survey course provides an overview of the integral use of data and information to manage, inform the operations, engage customers, patrons, and donors, and influence product/exhibit/program design in arts and entertainment businesses and organizations. The course will introduce core concepts of data literacy such as metadata and data management for collection curation and management, information seeking behaviors and enabling search, data management for business operations, descriptive analytics for reporting, using data for customer relationship management, and more advanced analytics. The course will explore how all these concepts fit together in the context of Arts and Entertainment Management and provide laboratory projects that provide hands-on experience with the different information and data management practices discussed.

Restriction: Permission of INFO-College of Information Studies.

INST765 Programming on the Web (3 Credits)

Non-programmers will learn basic programming and how to develop familiarity with web formatting and programming paradigms, including XML, REST, APIs, and authentication schemes. The class begins with an introduction to basic programming and students build on those skills by programming applications that use web-based data and services.

Prerequisite: INFM603, LBSC690, LBSC671, or INST733; or permission of instructor.

Credit Only Granted for: INFM743 or INST765.

Formerly: INFM743.

INST767 Big Data Infrastructure (3 Credits)

Principles and techniques of data science and business intelligence. Technologies and architectures for large-scale data warehousing and scale-out data analytics platforms. Supervised and unsupervised data mining.

Prerequisite: INST737; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

INST770 Information and Preparedness, Response and Recovery in Japan (3 Credits)

Education abroad program in Japan. Examines how individuals and groups respond to disaster through informal and formal practices of community resilience and recovery. Focuses on Japanese uses of information for these purposes, including storytelling, game-based learning, social media, archives, and memorials. Examines Japanese principles of community and kizuna ("connectedness"). Includes 2 weeks of pre-departure online course in the US, 1 week of study and travel in Japan over spring break, and 2 weeks of post-return online coursework in the US.

Credit Only Granted for: INST370 or INST770.

INST771 Foundations of Cybersecurity (3 Credits)

Explores the foundational concepts of cybersecurity including the Threat Landscape, the evolution and structures of the global telecommunications network, key communication protocols and foundations of networks, the history, culture and emergence of the hacking process, and the core motivations and tactics of threat actors.

INST772 Policy and Practice of Ethical Hacking (3 Credits)

Provides students with an understanding of the ethical frameworks and technical approach in the conduct of penetration testing and ethical hacking. Students will work with real systems in real environments and will leverage real vulnerability analysis and exploitation tools in a live environment. Upon completion, students will understand the overall concepts guiding penetration testing from a practical, hands-on vantage point.

Prerequisite: Must have completed or be concurrently enrolled in INST771.

INST773 Cyber Intelligence Fundamentals (3 Credits)

Provides students with an understanding of how to identify, track, and report on malicious activity. Students will learn to identify and work with malware and network data and pair it with a broader set of threat intelligence information to draw conclusions based on the totality of open source information and network intelligence. Students will gain a in depth understanding of the principles of cyber threat intelligence and techniques applied in the cyber threat industry. Students will engage in in-depth discussion and practice in evaluating and interpreting indicators of compromise, command and control, and artifacts left by malicious actors.

Prerequisite: INST771.

INST775 HCIM CAPSTONE PREP (3 Credits)

Students will define a project, which requires a high level of background research, rigor in execution and evaluation, and documentation. Capstone projects may follow the design, prototyping and evaluation process from end-to-end or may focus on a subset of elements in that process, such as formative study and design.

Prerequisite: INST631, INST632, and INST717; and must have completed Research Methods; and permission of INFO-College of Information Studies. Or permission of instructor.

Restriction: Must be taken in the fall semester of the year in which the student plans to graduate; and permission of INFO-College of Information Studies.

INST776 HCIM CAPSTONE PROJECT (3 Credits)

The opportunity to apply the skills learned through coursework in a semester-long project applied to a real -world problem. Capstone projects may follow the design, prototyping and evaluation process from end-to-end or may focus on a subset of elements in that process, such as formative study and design.

Prerequisite: INST775; or permission of instructor.

Restriction: Must be taken in the semester immediately following completion of INST775 HCIM Capstone Prep; and permission of INFO-College of Information Studies.

INST779 Readings Seminar (1 Credit)

Readings in emerging topics. Through readings and discussion the class will critically assess future directions and highlight intersection points with other disciplines (e.g., medicine) and sub-disciplines of information studies and computer science (e.g., information retrieval, computer vision, machine learning). One or more themes will be covered over the semester (e.g., inclusive design, health informatics, environmental sustainability, social networking) and will be chosen based on instructor and student interest.

Restriction: Permission of INFO-College of Information Studies.

Repeatable to: 3 credits if content differs.

Credit Only Granted for: INST779, INST728J.

Formerly: INST728J.

INST782 Arrangement, Description, and Access for Archives (3 Credits)

Introduction to the key concepts and practices involved with arrangement and description of archives, and the techniques appropriate to enable users to access archival information in traditional and nontraditional archival contexts.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC684, LBSC781, LBSC782, or INST782.

Formerly: LBSC684, LBSC781, and LBSC782.

INST784 Digital Preservation (3 Credits)

Issues and practices regarding digitization of analog materials and preservation of digital materials, both digitized and born digital.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC784 or INST784.

Formerly: LBSC784.

INST785 Documentation, Collection, and Appraisal of Records (3 Credits)

Development of documentation strategies and plans; collecting policies to guide programs in acquiring records; theories and techniques for appraising records to identify those with continuing value.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC785 OR INST785.

Formerly: LBSC785.

INST786 Museum Research Seminar (3 Credits)

A research seminar focusing on the practice and presentation of cultural and historical scholarship in museums and historical sites. Students will complete an original research project on the challenges and opportunities of public exhibition and interpretation of cultural and historical research.

Prerequisite: AMST655, ANTH655, or HIST610.

Cross-listed with: AMST856, ANTH856, HIST810.

Credit Only Granted for: AMST856, ANTH856, HIST810, INST728U or INST786.

INST787 Museum Scholarship Practicum (3-6 Credits)

Students devise and carry out a research program using the collections at the Smithsonian Institution or some other cooperating museum, working under joint supervision of a museum professional and a university faculty member.

Prerequisite: AMST856, ANTH856, or HIST810.

Cross-listed with: AMST857, ANTH857, HIST811.

Restriction: Permission of Museum Scholarship Program required.

Credit Only Granted for: AMST857, ANTH857, HIST811, INST728I or INST787.

INST788 Special Topics: Collaborative Curation (3 Credits)

This seminar considers the history of curation and curators within the institutional setting of museums and offers participants the opportunity, and challenge, to engage in curatorial practice by planning an exhibition that focuses on a critical aspect of life at and around the University of Maryland over the years.

Prerequisite: AMST655, ANTH655 or HIST610.

Recommended: AMST856, ANTH856, or HIST810; and AMST857, ANTH857 or HIST811.

Cross-listed with: AMST659, ANTH659, HIST688.

Restriction: Must have permission of the Museum Studies and Material Culture program.

Repeatable to: 6 credits if content differs.

Additional Information: Students enrolled in the MSMC (Museum Studies and Material Culture) certificate program will be given priority for enrollment.

INST794 Capstone in Youth Experience (3 Credits)

Through a supervised project, to synthesize design thinking, participatory design, connected learning, and learning theory/frameworks students will produce a technology-infused program for and with youth. Students will develop and carry out a project with a community partner through their library system. The project must incorporate technology and design thinking, and must be based on one or more learning theory/frameworks. Through the course, students will learn many practical skills related to planning and implementation of a technology-infused programming at or through their library, including marketing, fundraising, budgeting, legal issues, logistical issues, developing and sustaining community partnerships, developing engaging experiences for youth, and creating and analyzing learning assessments.

Prerequisite: INST650, INST651, and INST652; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies; and must be part of Youth Experience (YX) certificate program.

INST798 Seminar in Research Methods and Data Analysis (3 Credits)

Topics and issues in information studies research. Design and conduct of research project.

Jointly offered with: INST808.

Restriction: Permission of INFO-College of Information Studies; or permission of instructor.

Repeatable to: 9 credits if content differs.

INST799 Master's Thesis Research (1-6 Credits)

Repeatable to: 99 credits.

INST800 The Engaged Intellectual: An Introduction to Research and Academic Work (3 Credits)

An introduction to the academic life with a particular focus on what it means to undertake research, teaching, and service.

Restriction: Permission of INFO-College of Information Studies; and restricted to students in Ph.D. in Information Studies (INFS) program.

INST801 Theoretical and Epistemological Foundations in Information Studies (3 Credits)

Pursuing a doctorate in information studies involves the scholarly examination of the interaction between people, information, technology, and society. There are, however, as many ways to examine the interaction of people, information, technology, and society as there are researchers and ways of understanding what counts as evidence and knowledge in different components of the field. Students will be introduced to the diverse scholarly traditions that comprise information studies. Students will explore why there are so many ways of knowing and methods of discovery within the field, in order to help them identify the social theory and methods that will support their path through information scholarship.

Credit Only Granted for: INST888 or INST801.

Formerly: INST888.

INST802 Pragmatic and Methodological Foundations for Information Studies (3 Credits)

Information Studies' eclectic interdisciplinarity is both its greatest strength and its most significant weakness. As an increasingly multi/inter/trans/non-disciplinary intellectual community, Information Studies embraces a wide variety of conceptual frameworks, theories, methodological approaches, and intellectual traditions. As such, it is necessary to be able to bring many different intellectual perspectives to bear on the complex, nuanced, phenomena that are its focus. The variety in the intellectual toolbox of Information Studies is central to its ability to avoid reduction of its focal topics to trite, simplistic characterizations. However, the field's paradigmatic richness places particular burdens on the individual researcher. The purpose of this seminar is to help students develop a reflective practice that they can rely on to turn their interests into valuable new insights in an interdisciplinary domain like Information Studies.

Credit Only Granted for: INST888 or INST802.

Formerly: INST888.

INST808 Seminar in Research Methods and Data Analysis (3 Credits)

Topics and issues in information studies research. Design and conduct of research project.

Restriction: Permission of INFO-College of Information Studies. And must be in Information Studies (Doctoral) program; or permission of instructor.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: INST808, LBSC802, or INST802.

Formerly: LBSC802, INST802.

INST809 Individualized Teaching Experience (3-5 Credits)

Introduction to the techniques and challenges associated with design, delivery, and evaluation of courses offered at the University level. The doctoral student will work one-on-one with a faculty member in the development and co-teaching of a graduate level course.

Prerequisite: Must have completed 18 credit hours of doctoral course work.

Restriction: Permission of INFO-College of Information Studies; and permission of instructor.

Repeatable to: 6 credits.

Credit Only Granted for: INST809, LBSC774, INST728G.

Formerly: INST728G.

INST811 Pedagogy and Curriculum Development (3 Credits)

In this course, doctoral students will gradually and iteratively build a syllabus for an original course related to Information Studies. The course will cover, in sequence: curriculum models and development; learning outcome development; syllabus development; classroom management and dynamics; design of student assessments; design and delivery of classroom lectures; discussion moderation; working with teaching assistants; hybrid and online pedagogy; learning outcomes assessment; course evaluations; and teaching statements. Upon completion of the course, students will have a fully developed teaching portfolio.

INST818 Individual Research Experience (1-3 Credits)

Pre-candidacy individual research experience directed by a faculty member.

Repeatable to: 3 credits.

INST878 Special Topics in Information Studies (3 Credits)

Seminar topics offered as faculty and student interests warrant. Topic varies.

Restriction: Permission of INFO-College of Information Studies. And must be in Information Studies (Doctoral) program; or permission of instructor.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: INST878 or LBSC878.

Formerly: LBSC878.

INST888 Doctoral Seminar (3 Credits)

Advanced seminar on selected topics in information studies.

Restriction: Must be in Information Studies (Doctoral) program; and permission of INFO-College of Information Studies.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: INST888 or LBSC888.

Formerly: LBSC888.

INST898 Pre-Candidacy Research (1-8 Credits)**INST899 Doctoral Dissertation Research (1-8 Credits)****ISRL - Israel Studies****ISRL448 Seminar in Israel Studies (3 Credits)**

Intensive study of an Israel Studies topic. Expected work product is a substantial research or analysis paper or appropriate equivalent.

Recommended: ISRL349 and ISRL249.

Restriction: Must be in the Israel Studies Minor.

ISRL449 Advanced Topics in Israel Studies (3 Credits)

Topics in the study of Zionism and contemporary Israel from the 1880s to the present at the advanced level. Individual sections may address history, politics, or culture. Some Sections may have language or course prerequisites.

Recommended: ISRL349 or ISRL249.

Repeatable to: 6 credits if content differs.

ISRL499 Advanced Independent Study in Israel Studies (1-3 Credits)

This upper-level independent study allows students to work closely with an Israel Studies faculty member of their choice, pending prior approval of the faculty member. In this independent study, students will focus on a topic specific to Israel Studies.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 6 credits.

ISRL618 Graduate Seminar in Israel Studies (3 Credits)

An exploration of aspects of the history, politics, society, or culture of Modern Israel. Topics will vary.

Restriction: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ISRL628 Special Topics in Israeli History (3 Credits)

An exploration of aspects of the history of Modern Israel. Topics will vary.

Restriction: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ISRL638 Special Topics in Israeli Politics (3 Credits)

An exploration of aspects of Israeli politics. Topics will vary.

Restriction: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ISRL648 Special Topics in Israeli Society (3 Credits)

An exploration of aspects of Israeli society. Topics will vary.

Restriction: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ISRL658 Special Topics in Israeli Culture (3 Credits)

An exploration of aspects of Israeli culture. Topics will vary.

Restriction: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ISRL699 Independent Study in Israel Studies (3 Credits)

This graduate-level independent study allows graduate students to work closely with an Israel Studies faculty member of their choice, pending prior approval of the faculty member. In this independent study, graduate students will focus on a topic specific to Israel Studies.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

ITAL - Italian**ITAL411 Monsters and Demons: the Faces of Evil in Dante's Inferno (3 Credits)**

An interdisciplinary study of Dante's Inferno as represented in the Divine Comedy. Special emphasis on Dante's own portrayal of monsters and demons and their roles in the poet's eschatological vision of Hell. Taught in English

ITAL421 The Italian Renaissance (3 Credits)

A study of major trends of thought in Renaissance literature, art, and science. Taught in English.

Credit Only Granted for: ITAL421 or ITAL422.

ITAL431 Italian Civilization in Translation (3 Credits)

Political, social, intellectual, literary and artistic forces shaping contemporary Italy from the late Middle Ages to the present. Taught in English.

Credit Only Granted for: ITAL431 or ITAL432.

ITAL433 Holocaust in Italian Literature and Cinema (3 Credits)

Review of literature and theoretical writings of Italy's most famous survivor, Primo Levi, to a sampling of Italian films that focus in vastly different and often extremely controversial ways on the experience of the concentration camp, while addressing a series of central questions from the brutal realities of the camps to the "compromises" made in order to survive, the need to bear witness, and the idea of the survivor's guilt.

Cross-listed with: CINE433.

Credit Only Granted for: CINE433, FILM433 or ITAL433.

Formerly: FILM433.

ITAL436 Italian Cinema I: Neorealism (3 Credits)

Explores representations of Italy in cinema with special focus on identity formation and the movement of Italian neorealism and post neorealism. Taught in English.

Cross-listed with: CINE441.

Credit Only Granted for: CINE441, FILM441 or ITAL436.

Formerly: FILM441.

ITAL441 The Dark Side of the Italian Renaissance (3 Credits)

Examines the dark aspects of the Italian Renaissance, focusing on artistic and literary patronage as a strategy of self-promotion and as a means to achieve and preserve power. From the Northern court of Milan to the Southern Kingdom of Naples, we journey through the Italian peninsula, a land that gave birth to illustrious artists and poets in one of the most troubled periods of Italian history, marked by political conflict, bloody rivalries, family betrayals, and wars. What hides beneath the image of some of these benevolent and enlightened patrons of learning, often praised as "ideal rulers" by artists and writers of the Renaissance, are ambitious and crafty politicians, who sought their own interests and goals in their ruthless pursuit of power

Recommended: Some knowledge of Italian at the elementary or intermediate level.

ITAL469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

ITAL471 Italian Cinema: A Cultural Approach in Translation (3 Credits)

The culture of Italy through the medium of film from the silent days up to the present. Taught in English.

Credit Only Granted for: ITAL471 or ITAL472.

ITAL473 Italian Cinema II (In Translation) (3 Credits)

A study of Italian society and culture through the medium of film from the mid 1970's to the present. Taught in English.

Cross-listed with: CINE431.

Credit Only Granted for: ITAL473, CINE431 or FILM431.

Formerly: FILM431.

ITAL475 The Italian Opera Libretto in English (3 Credits)

History and analysis of Italian opera librettos from Monteverdi through Mozart to Verdi and Puccini. Taught in English.

Prerequisite: Must have completed one course in literature.

Credit Only Granted for: ITAL475 or ITAL476.

ITAL478 Colloquium in Italian (1 Credit)

Colloquium section taught in Italian to accompany 400-level Italian courses taught in English. Discussion, presentations, readings.

Prerequisite: ITAL311; or students who have taken courses with comparable content may contact the department.

Corequisite: ITAL498, ITAL411, ITAL431, ITAL421, ITAL473, ITAL475, ITAL471, or ITAL499.

Repeatable to: 6 credits.

ITAL498 Special Topics in Italian Literature (3 Credits)

Repeatable to: 6 credits if content differs.

ITAL499 Special Topics in Italian Studies (3 Credits)

Repeatable to: 6 credits if content differs.

JAPN - Japanese

JAPN401 Readings in Modern Japanese Literature (3 Credits)

Development of advanced reading, vocabulary, grammar, and translation skills through selected readings in Japanese drawn primarily from modern literature.

Prerequisite: Minimum grade of C- in JAPN302; or permission of instructor.

JAPN402 Readings in Japanese Cultural Studies (3 Credits)

Development of advanced reading, vocabulary, grammar, and translation skills through selected readings in Japanese drawn from the fields of history, social sciences, cultural studies, film studies, and popular culture.

Prerequisite: Minimum grade of C- in JAPN302; or permission of instructor.

JAPN407 The Art of Translation (3 Credits)

Theory and practice of translation. Variety of genres. Japanese to English.

Prerequisite: 1 course with a minimum grade of C- from (JAPN401, JAPN402); or students who have taken courses with comparable content may contact the department.

JAPN408 Special Topics in Japanese (3 Credits)

Topic in the Study of Japanese, to be announced each time course is offered. Taught in Japanese.

Prerequisite: Minimum grade of C- in JAPN302; or permission of instructor.

JAPN412 Classical Japanese (3 Credits)

Continuation of JAPN 411 with more advanced classical Japanese.

Prerequisite: JAPN411.

JAPN418 Japanese Literature in Translation (3 Credits)

Representative works of Japanese literature in translation.

Repeatable to: 9 credits if content differs.

JAPN421 History of the Japanese Language (3 Credits)

Investigation of the origin of the Japanese language, its relationship with other languages, and its development. Taught in English, but presumes knowledge of Kanji (Chinese characters).

Prerequisite: JAPN102; or permission of ARHU-School of Languages, Literatures, and Cultures department.

JAPN424 Japan From the Margins (3 Credits)

Japan from the Margins takes as its focus the history and representations of various others in Japanese society. They include ethnic Ainu, Okinawans, and Koreans, a historical outcaste group called the Burakumin, and people marginalized for their non-normative gender and sexual practices. Students learn about the historical specificities of each group as well as their common experiences of institutional discrimination as they grapple with larger questions regarding prejudice, nationalism, and social justice. Taught in English.

JAPN425 The Atomic Bomb in Literature and Memory (3 Credits)

Study of declassified documents and commentary on the United States decision to use the bomb in 1945, the many ways Japanese writers have attempted to express their indescribable experiences in Hiroshima and Nagasaki, and the shaping of historical narratives and national identities in post-war Japan and the U.S. Taught in English.

JAPN428 Seminar in Japanese Discourse and Conversation Analysis (3 Credits)

Presentation and discussion of classic and current readings in English and Japanese on theories and actual practice of discourse and conversation analysis. Students will learn transcription techniques and have an opportunity to apply them in a final term paper.

Prerequisite: JAPN302.

Recommended: JAPN422.

Repeatable to: 6 credits if content differs.

JAPN438 Topics in Japanese Pragmatics (3 Credits)

Basic concepts in the field of pragmatics (the study of language in context) such as deixis and indexicality, speech acts, ellipsis, and politeness. Readings in English on English and Japanese examples.

Prerequisite: JAPN201.

Recommended: JAPN422.

Repeatable to: 9 credits if content differs. Jointly offered with JAPN638.

JAPN445 Performance and Sexuality in Early Modern Japan (3 Credits)

Explores the intersections between performance and sexuality in early modern Japan. Our main sites will be the stage, the brothels, and everyday life as we examine how people of the period performed gender and sexuality. We will draw from popular fiction, kabuki, puppet theatre, woodblock prints, guides to the pleasure quarters, and censorship edicts. Taught in English.

Credit Only Granted for: JAPN498J or JAPN445.

Formerly: JAPN498J.

JAPN447 Technologies of Japanese Performance (3 Credits)

Explores technologies of performance in Japan across the centuries. We will focus on concepts of likeness and liveness as they manifest in performance's mythical origins, the traditions of noh drama, the popular, commercial theatres of kabuki, bunraku, and Takarazuka, and contemporary experiments with robotics, Vocaloids, and other new technologies. Taught in English.

Credit Only Granted for: JAPN498P or JAPN447.

Formerly: JAPN498P.

JAPN498 Special Topics in Japanese Studies (3 Credits)

Special topics in Japanese studies. Taught in English.

JAPN499 Directed Study in Japanese (1-3 Credits)

Prerequisite: Permission of instructor.

Repeatable to: 6 credits if content differs.

JAPN608 Readings in Advanced Modern Japanese (3 Credits)

To improve reading and translation skills; readings from newspaper articles, literary works, and academic publications in the social sciences and humanities. Listening exercises are included.

Prerequisite: JAPN402; or students who have taken courses with comparable content may contact the department; or permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

JAPN619 Topics in Modern Japanese Literature in Translation (3 Credits)

Current topics in modern Japanese literature in English translation.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 9 credits if content differs.

JAPN628 Seminar in Japanese Discourse and Conversation Analysis (3 Credits)

Presentation and discussion of classic and current readings in English and Japanese on theories and actual practice of discourse and conversation analysis. Students will learn transcription techniques and have an opportunity to apply them in a final term paper.

Prerequisite: JAPN302.

Recommended: JAPN422.

Repeatable to: 6 credits if content differs.

JAPN638 Topics in Japanese Pragmatics (3 Credits)

Basic concepts in the field of pragmatics.

Prerequisite: JAPN201.

Repeatable to: 9 credits if content differs. Jointly offered with JAPN438.

JAPN679 Special Topics in Japanese Linguistics (3 Credits)

Current topics in research in Japanese linguistics.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 9 credits if content differs.

JOUR - Journalism

JOUR400 Media Law (3 Credits)

Legal rights and constraints of mass media; libel, privacy, copyright, monopoly, contempt, and other aspects of the law applied to mass communication. Previous study of the law not required.

Prerequisite: JOUR320, JOUR360, or JOUR501.

Restriction: Junior standing or higher.

JOUR402 Journalism Law and Ethics (3 Credits)

An examination of the legal rights and ethical problems and constraints of mass media, including libel, privacy, copyright, monopoly and contempt.

Prerequisite: JOUR201.

Credit Only Granted for: JOUR402 OR JOUR400 and JOUR300.

JOUR405 Breaking News With Numbers: Statistics for Journalists (3 Credits)

Common statistical tools, software and data visualization techniques will be used to allow students to analyze data and solve problems relevant to reporting and writing about politics, sports, criminal justice, business and other fields.

Prerequisite: Minimum grade of C- in JOUR201; and (MATH107 or MATH110; or must have completed a higher level math course).

Restriction: Must be in a major in JOUR-Philip Merrill College of Journalism.

JOUR434 Salzburg Seminar: Global Media Literacy (3 Credits)

An advanced analysis of the information, values underlying messages conveyed via television, newspapers, the Internet, magazines, radio and film from a cross-cultural perspective. Examines the accuracy of messages and explores how distinctive global media shape views of politics culture and society with nations, across regions and internationally.

Restriction: Must be in Salzburg Academy program. Jointly offered with JOUR734.

Credit Only Granted for: JOUR434 or JOUR734.

JOUR435 Salzburg Seminar: Global Change, Global Cooperation (3 Credits)

Practical and theoretical examination of a global problem (or problems) of contemporary importance from a cross-cultural, perspective. Analytical framework used to examine how media shape global problems, events and/or issues regionally.

Restriction: Must be in Salzburg Academy program. Jointly offered with JOUR735.

Credit Only Granted for: JOUR435 or JOUR735.

JOUR443 Sports, Society, Culture and the Media (3 Credits)

Designed to explore how sports, society, culture and the media critically relate to each other and the vast audiences of fans and interested parties. Students will study how journalists impact change; how sports shape culture; and how sports are seen throughout the world. College sports, children and sports, the business of sports, the history of sports media and the future of sports in society will be studied as well.

Restriction: Junior standing or higher.

Credit Only Granted for: JOUR459G or JOUR443.

Formerly: JOUR459G.

JOUR447 Sports, Protest and the Media (3 Credits)

Addresses why activists, whether athletes or not, have long commanded ceremonial and ritualistic games to promote a cause or take a stand. It examines the important role of media as collectors, editors, interpreters and disseminators of information or news about athletic competitions, athletes and political pronouncements revolving around athletic events and their participants.

Credit Only Granted for: JOUR447 or JOUR458M.

Formerly: JOUR458M.

JOUR451 Advertising and Society (3 Credits)

Advertising as an institution with manifest economic purposes and latent social effects. Influences of advertising on people, and related issues of ethics and social responsibility.

Restriction: Junior standing or higher.

JOUR452 Women in the Media (3 Credits)

Participation and portrayal of women in the mass media from colonial to contemporary times.

Cross-listed with: WGSS452.

Credit Only Granted for: JOUR452, WMST452 or WGSS452.

Formerly: WMST 452.

JOUR453 Media Coverage of Diversity (3 Credits)

Analysis of media coverage of issues relating to diversity in the United States, with special attention to race, ethnicity, class, gender, sexual orientation and religious affiliation.

Restriction: Junior standing or higher.

JOUR455 Media Entrepreneurship (3 Credits)

Basic business and entrepreneurship concepts will be covered and will explore how technology is transforming the business of media. Students develop and pitch ideas for media businesses, learn startup basics, do exercises in Internet advertising and business plan analysis, use social networks and other digital communication tools, and perform other hands-on exercises in business development and presentation.

JOUR456 Literature in Journalism (3 Credits)

From Truman Capote's *In Cold Blood* to Mark Bowden's *Black Hawk Down*, students will examine how literary works can help writers approach a subject in a different way than more traditional forms of journalism, including the advantages and limitations of the style.

Credit Only Granted for: JOUR456 or JOUR673.

JOUR458 Special Topics in Journalism (3 Credits)

Issues of special concerns and current interest.

Repeatable to: 6 credits if content differs.

JOUR459 Special Topics in Journalism (1-3 Credits)

Issues of special concern and current interest. Open to all students.

Repeatable to: 6 credits if content differs.

JOUR471 Follow the Money: Reporting on Business (3 Credits)

Business and economics reporting is one of the strongest sectors of journalism with lucrative employment opportunities. This class, designed for journalism and non-journalism majors, introduces students to the main economic and business themes that dominate news coverage. Topics will include: corporate money and power in Washington, the ups and downs of the stock market, rising income inequality, the immigration crisis, why we have a trade war with China and technology disruptors. This class will be helpful to students who want to enhance their career opportunities by understanding how the economy works, why globalization is important and how the biggest corporations—including technology companies—have such a big influence on the way we live.

Prerequisite: Must have completed a university statistics course.

Restriction: By permission of the College of Journalism.

Credit Only Granted for: JOUR479C or JOUR471.

Formerly: JOUR479C.

JOUR472 Data Journalism (3 Credits)

A practical, skills-based course in the basics of modern data journalism, data literacy and data storytelling. Students will learn to use data visualization, data analysis and other data-driven reporting techniques.

Prerequisite: JOUR320 or JOUR360.

Jointly offered with: JOUR772.

Credit Only Granted for: JOUR472 or JOUR772.

JOUR473 Computational Journalism (3 Credits)

Designed to teach the application of computational methods in journalism and reporting. The methods include natural language processing, visualization, and web data mining. The course will also cover the necessity and impact of journalistic ethics in designing computation solutions.

Prerequisite: Permission of the Philip Merrill College of Journalism.

Cross-listed with: INST403.

Jointly offered with: JOUR773.

Credit Only Granted for: JOUR479V, JOUR473, INST408I or INST403.

Formerly: JOUR479V and INST408I.

JOUR475 Understanding Audiences and Analytics (3 Credits)

As journalism evolves, it may be more important than ever to understand what were once simply called "audiences" – who they are, how they consume news, and what that engagement means for them and for society. Students will learn to think critically about news audiences and contemporary issues in audience research.

Prerequisite: Student must have completed a university statistics course.

Credit Only Granted for: JOUR479O or JOUR475.

Formerly: JOUR479O.

JOUR476 Researching Emerging Media in Journalism: Past, Present and Future (3 Credits)

Students will examine developments billed as innovative in the current technology-laden news ecology – such as social media, mobile reporting and virtual reality – and the blurring of lines between hard news, informed opinion and advocacy. While questions about the future cannot be answered with any certainty, an exploration of the past allows us to see what happened when new technologies, information systems and practices appeared as possible tools for use by journalists and the communities they served. Students will learn to use resources for researching emerging media, including UMD library databases and open access sources. The course will include presentations by the instructor, discussions, field trips, in-class exercises and student presentations. Each student will engage in a research project to understand the experience of emerging media in a decade between 1820 and 1980. Students will also write an essay contemplating current trends and the future of emerging media.

Prerequisite: Must have completed a university statistics course.

JOUR479 Special Topics in Data Gathering and Analysis (1-3 Credits)

Special research topics for reporting and writing.

Repeatable to: 3 credits.

JOUR480 Capstone Colloquium: The Business of News (1 Credit)

Students will learn the basic news business concepts and examine how revenue and cost structures for media businesses are evolving in new directions. Topics include basic principles and concepts that drive media businesses in the Internet age, including revenue sources, dynamics of online advertising and subscriptions, mobile media strategies, user metrics, engaging audiences, and market dynamics.

Restriction: Must be in a major in JOUR-Philip Merrill College of Journalism; and junior standing or higher; and permission of JOUR-Philip Merrill College of Journalism.

JOUR601 Theories of Journalism and Public Communication (3 Credits)

Survey and evaluation of current communication theories. Attention is given to the nature and function of scientific theory, models of communication behavior, the nature of information, social functions of journalism and public communication, attitude change and persuasive communication and theories of language and meaning.

Prerequisite: Permission of JOUR-Philip Merrill College of Journalism.

JOUR603 News Videography (3 Credits)

Introduction to shooting, editing and production of video stories for broadcast and the Web; includes newsgathering in the field.

Prerequisite: JOUR501 or JOUR502; or permission of JOUR-Philip Merrill College of Journalism.

Jointly offered with: JOUR347.

Restriction: Permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR503 or JOUR603.

Formerly: JOUR503.

JOUR604 Introduction to Multimedia Skills for Graduate Certificate Programs (3 Credits)

Examine the basics of producing and editing digital photos, video and audio for news. Topics include framing, lighting and other aspects of composition; sequencing, using wide, medium and tight shots; and ethical considerations when collecting sound and visuals.

Restriction: Permission of JOUR-Philip Merrill College of Journalism; and must not have completed JOUR504.

Credit Only Granted for: JOUR 604, JOUR504, or JOUR628G.

Formerly: JOUR628G.

Additional Information: This course is for students enrolled in graduate certificate programs in the College of Journalism.

JOUR610 Seminar in Mass Media History (3 Credits)

Analysis and discussion of the interrelationships between the mass media and society, including various social and cultural elements of modern society; responsibilities of the mass media and the mass communicator.

Credit Only Granted for: JOUR610 or JOUR710.

Formerly: JOUR710.

JOUR620 Public Affairs Reporting (3 Credits)

Designed to add to and sharpen the skills learned in JOUR501 or JOUR502. It is primarily an introduction to "beat" reporting that allows students to sample the most common new beats while reporting and writing on deadline. Students are required to develop and hone their multimedia skills by reporting in a variety of media.

Prerequisite: JOUR501 or JOUR502; or permission of JOUR-Philip Merrill College of Journalism.

JOUR623 Mobile Journalism (3 Credits)

A review of several mobile applications and the "hands-on" skills needed to collect and share news in the field. First, students learn how to remotely post information to blogs and social networks. Students then learn and practice the latest location-based production techniques using web services on wireless laptops and mobile devices. Students use laptops (and their own "SmartPhone") to record, edit and upload audio and video.

Prerequisite: Students must have basic computer skills.

Credit Only Granted for: JOUR689M or JOUR623.

Formerly: JOUR689M.

JOUR624 Commentary and Editorial Writing (3 Credits)

Journalistic interpretation and analysis; commentary and editorial writing.

Credit Only Granted for: JOUR624 or JOUR628N.

Formerly: JOUR628N.

JOUR625 Advanced Capital News Service Bureau (6 Credits)

Advanced journalism training. Students report as part of College's Capital News Service program.

Prerequisite: JOUR620; and permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR625 or JOUR729.

Formerly: JOUR729.

JOUR627 Urban Affairs Reporting (3 Credits)

Students are immersed in coverage of issues affecting cities, working on a semester-long multi-platform reporting project based in Baltimore.

Prerequisite: JOUR501; and permission of JOUR-Philip Merrill College of Journalism.

Corequisite: JOUR620; or permission of JOUR-Philip Merrill College of Journalism. Jointly offered with JOUR327.

Credit Only Granted for: JOUR327 or JOUR627.

JOUR628 Specialized Topics in News Writing and Reporting (1-3 Credits)

Advanced training and practice in writing and reporting news. Repeatable to a maximum of six credits provided the content differs.

Credit Only Granted for: JOUR628 or JOUR728.

Formerly: JOUR728.

JOUR634 Audio and Podcast Reporting (3 Credits)

Students will learn the tools needed to report and produce short- and long-form audio storytelling, including writing, reporting, interviewing, production, editing, hosting and delivery. Field reporting and audio gathering outside of class are required, along with writing and mixing broadcast-quality audio stories. The class will produce a complete newscast on deadline, with live and pre-recorded elements. Various interests in audio reporting are welcome and encouraged.

Prerequisite: JOUR660; or permission of Philip Merrill School of Journalism Associate Dean.

Jointly offered with: JOUR334.

Formerly: JOUR668L.

JOUR635 Advanced Public Affairs Reporting: Investigative Journalism (3 Credits)

Students will learn the essentials of accountability reporting while producing a publishable, in-depth project on an issue with national significance and impact on people's lives. Substantial fieldwork, teamwork and persistence are required.

Prerequisite: JOUR620 or comparable experience.

Restriction: Permission of College of Journalism.

Credit Only Granted for: JOUR698I or JOUR635.

Formerly: JOUR698I.

JOUR636 Studio Production (3 Credits)

Moves through every production aspect related to studio production. This includes learning how to plan and execute a live studio production featuring camera crews, a floor director, producer, director, technical director, audio and teleprompter. Labs focus on executing a live newscast production. Students will also be able to go on live shots with reporters to run camera/lighting.

Prerequisite: JOUR603.

Credit Only Granted for: JOUR636, JOUR336, JOUR668L or JOUR368L.

Formerly: JOUR668L.

JOUR637 Designing Stories with Motion Graphics (3 Credits)

Students learn to create motion graphics that turn data and facts into visually compelling, animated stories, using storyboarding, scripting and Adobe software. Theories and practices of animation, design and visual journalism are discussed.

Prerequisite: Must have completed or be concurrently enrolled in JOUR652.

Credit Only Granted for: JOUR668I, JOUR637 or JOUR368I.

Formerly: JOUR668I.

JOUR652 Interactive Design and Development (3 Credits)

Conceptualize, wireframe, design and build responsive Web pages using HTML, style sheets and other coding tools; work with open source interactive tools and JavaScript libraries to create charts, timelines and maps to tell stories.

Prerequisite: Master of Journalism students must have taken or be concurrently enrolled in JOUR620; or must have permission of the Philip Merrill College of Journalism.

Recommended: Multimedia Journalism certificate students are encouraged to take or be concurrently enrolled in JOUR604.

Restriction: Must be in a major in JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR652 or JOUR352.

JOUR654 Advanced Interactive Multimedia Storytelling (3 Credits)

Learning and applying Flash and/or other interactive tools to assemble multiple media (i.e. graphics, video, etc.) to create interactive narratives.

Prerequisite: JOUR652; and permission of JOUR-Philip Merrill College of Journalism.

JOUR655 Advanced Online News Bureau (6 Credits)

Advanced online journalism training. Students work as online reporters, editors and producers for a news site. Students also package copy from the print and broadcast news bureaus.

Prerequisite: JOUR603 or JOUR620; and JOUR652; or permission of JOUR-Philip Merrill College of Journalism.

JOUR656 Advanced Kaiser Health Multimedia Reporting (3 Credits)

Advanced reporting on health topics, using traditional and multimedia storytelling tools.

Prerequisite: JOUR504.

Corequisite: JOUR620 or JOUR503.

Restriction: Permission of instructor.

JOUR657 Social Media Content Creation, Audience Engagement and Analytics (3 Credits)

Provides students with an overview of social media best practices for journalists, and will work to develop their skills in social content creation, audience engagement, sourcing and verification and analytics. By the end of this course, students will have the practical skills needed to manage a social media account for themselves or contribute to the management of a news organization's social media presence.

Corequisite: JOUR620; or permission of the department.

Credit Only Granted for: JOUR657, JOUR668D or JOUR368D.

Formerly: JOUR668D.

JOUR660 Broadcast News Writing (3 Credits)

Descriptive and critical analysis of broadcast news; methods of evaluation of news judgments; decision-making and organizational aspects of the broadcast news industry.

Prerequisite: JOUR501 or JOUR502; or permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR660 or JOUR760.

Formerly: JOUR760.

JOUR661 Television Reporting and Production (3 Credits)

Reporting, writing, editing and production of broadcast news.

Prerequisite: JOUR603 and JOUR660.

Restriction: Must not be in Journalism Studies (Doctoral) program.

JOUR662 Broadcast News Producing (3 Credits)

Learn and practice the basics of broadcast newscast producing. Design, write, edit and implement a news program.

Prerequisite: Must have completed JOUR603 and JOUR660.

Jointly offered with: JOUR362.

Credit Only Granted for: JOUR362 or JOUR662.

JOUR663 Long Form Broadcast Journalism (3 Credits)

Productions of long form broadcast news reporting, reality videos or documentaries.

Prerequisite: JOUR503 or JOUR603; and JOUR661. Or students who have taken courses with comparable content may contact the department. Also offered as: JOUR363.

Credit Only Granted for: JOUR363, JOUR486, or JOUR663.

Formerly: JOUR486.

JOUR664 Advanced Audio and Podcast Reporting (3 Credits)

Students receive professional skills training in the reporting, writing, editing, voicing and production of radio news. Students will be required to do extensive field reporting, along with writing and mixing broadcast-quality radio pieces. They will also participate in other aspects of radio news production, including editing, directing, live interviewing and hosting. By the end of the semester, students will have created all the elements of a complete radio broadcast, including news spots, finished pieces, two-ways and a long-form audio segment. The class will also delve into the history and evolution of radio news and its future in podcasting and other forms.

Prerequisite: JOUR634; or permission of JOUR-Philip Merrill College of Journalism.

Jointly offered with: JOUR364.

Restriction: Permission of JOUR-Philip Merrill College of Journalism.

JOUR667 Broadcast News Bureau (6 Credits)

Advanced broadcast journalism training. Students report as part of the College's Capital News Service program.

Prerequisite: JOUR661.

Jointly offered with: JOUR367, JOUR357.

JOUR668 Topics in Broadcasting and Electronic Media (1-3 Credits)

Advance research and analysis of selected topics in broadcast journalism.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: JOUR668 or JOUR768.

Formerly: JOUR768.

JOUR670 Photojournalism (3 Credits)

Examining the basics of shooting, editing and storytelling with still photos taken with 35mm digital cameras. Students shoot portraits, feature photos and action shots. Final project is a photo story/essay.

Prerequisite: JOUR620.

Jointly offered with: JOUR370.

Restriction: Must be in a major in JOUR-Philip Merrill College of Journalism; and permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR368P, JOUR370 or JOUR670.

Additional Information: Students are required to borrow, rent or purchase a 35mm digital camera. Contact department for camera specifications.

JOUR681 Media Industry Reporting (3 Credits)

Students hone their reporting and writing skills as they produce work for the Web site of an award-winning professional publication, and immerse themselves in the news industry, which is undergoing dramatic transformation in the digital age.

Prerequisite: JOUR501; or permission of JOUR-Philip Merrill College of Journalism.

Corequisite: JOUR620; or permission of JOUR-Philip Merrill College of Journalism.

Jointly offered with: JOUR381.

Restriction: Permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR381 or JOUR681.

JOUR682 Sports Reporting and Writing (3 Credits)

Gives students wide-ranging instruction in all aspects of sports reporting and writing, from the history of the craft to its mechanics, including how to report, write, edit and lay out sports stories, incorporating multimedia and interactive elements. Ethics, objectivity, fairness and the future of sports journalism will be discussed.

Prerequisite: JOUR620.

Jointly offered with: JOUR382.

Credit Only Granted for: JOUR628B, JOUR682 or JOUR382.

Formerly: JOUR628B.

JOUR683 Advanced Photojournalism (3 Credits)

Provides a deeper dive into the storytelling medium of photojournalism. Students will learn the skills necessary to tell in-depth, long-term stories through the use of still photography. Topics of discussion will include the history of photojournalism, changing approaches to the photo story/essay over time, how to approach a variety of potential subject matters and situations, finding long-term photo story projects and organizing images for a variety of digital and traditional formats.

Prerequisite: JOUR670.

Jointly offered with: JOUR383.

Restriction: Permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR668N or JOUR683 .

Formerly: JOUR668N.

JOUR689 News Coverage of Specialized Topics (1-3 Credits)

Advance training and practice in writing and reporting news in on specialized field of interest.

Prerequisite: JOUR620; or JOUR660.

Repeatable to: 6 credits if content differs.

JOUR698 Special Problems in Communication (1-3 Credits)

Independent study in area of the student's interest.

Repeatable to: 6 credits.

JOUR702 Journalism Law and Ethics (3 Credits)

An examination of the legal rights and ethical problems and constraints of mass media, including libel, privacy, copyright, monopoly and contempt.

Restriction: Must be in one of the following programs (Journalism - Master (Master's); Journalism Studies (Doctoral)) ; or permission of JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: JOUR400, JOUR 600, JOUR700, or JOUR 702.

JOUR722 Mediacentric Politics (3 Credits)

Examination of the growing use of the media image and issues in electoral politics and interest-group advocacy.

Prerequisite: JOUR601.

JOUR725 Political Communication (3 Credits)

Critical examination of the interplay between the media, government and the political process.

Prerequisite: JOUR601 or JOUR801.

JOUR729 Reporting from Annapolis and Washington (6 Credits)

Advanced training in public affairs journalism. Students report state and federal news as part of College's Capital News Service.

Repeatable to: 12 credits if content differs.

JOUR734 Salzburg Seminar: Global Media Literacy (3 Credits)

An advanced analysis of the information, values and underlying messages conveyed via television, newspapers, the Internet, magazines, radio and film from a cross-cultural perspective. Examines the accuracy of messages and explores how distinctive global media shape view of politics, culture and society within nations, across regions and internationally.

Restriction: Must be in Salzburg Academy program. Jointly offered with JOUR434.

Credit Only Granted for: JOUR434 or JOUR734.

JOUR735 Salzburg Seminar: Global Change, Global Cooperation (3 Credits)

Practical and theoretical examination of a global problem (or problems) of contemporary importance from a cross-cultural, perspective. Analytical framework used to examine how media shape global problems, events and/or issues regionally.

Restriction: Must be in Salzburg Academy program. Jointly offered with JOUR435.

Credit Only Granted for: JOUR435 or JOUR735.

JOUR738 Topics in International and Cross-Cultural Communication (3 Credits)

Specialized topics in the fields of comparative journalism and mass communications and in the field of cross-cultural communication.

Repeatable to: 6 credits if content differs.

JOUR757 History of Investigative Journalism (3 Credits)

Teaches the history of investigative journalism in the U.S., focusing on key time periods from colonial times to the present.

Credit Only Granted for: JOUR757, JOUR779I, JOUR459I, or JOUR457.

Formerly: JOUR779I.

JOUR762 Professional Seminar in Public Affairs Reporting (3 Credits)

Examination of theoretical and practical issues in the press coverage on government and public affairs.

Prerequisite: JOUR620; and permission of JOUR-Philip Merrill College of Journalism.

Restriction: Must not have completed JOUR462.

JOUR763 Seminar in Newsroom Management (3 Credits)

Organization, operation, and administration of the departments of a newsroom: advertising, business-finance, circulation, news-editorial, personnel, production and promotion.

Credit Only Granted for: JOUR481, JOUR675, or JOUR763.

Formerly: JOUR675.

JOUR772 Data Journalism (3 Credits)

A practical, skills-based course in the basics of modern data journalism, data literacy and data storytelling. Students will learn to use data visualization, data analysis and other data-driven reporting techniques.

Prerequisite: Must have completed JOUR502, or students who have taken courses with comparable content may contact the department.

Jointly offered with: JOUR472.

Credit Only Granted for: JOUR772 or JOUR472.

JOUR773 Computational Journalism (3 Credits)

Designed to teach the application of computational methods in journalism and reporting. The methods include natural language processing, visualization, and web data mining. The course will also cover the necessity and impact of journalistic ethics in designing computation solutions.

Prerequisite: Permission of the Philip Merrill College of Journalism.

Cross-listed with: INST617.

Jointly offered with: JOUR473.

Credit Only Granted for: JOUR779V, JOUR773, JOUR473, JOUR479V, INST617, INST408I, or INST403.

Formerly: JOUR779V.

JOUR775 Quantitative Methods in Journalism and Public Communication Research (3 Credits)

Logic and methods of quantitative data collection and statistical analysis as applied to journalism and public communication studies.

Credit Only Granted for: JOUR701 or JOUR775.

Formerly: JOUR701.

JOUR776 Qualitative Research Methods in Journalism and Public Communication (3 Credits)

Methods of historical, critical and field research in journalism and public communication. Formulation of significant research questions, systematic collection of bibliographic and phenomenal information, formulating substantial claims, organizing and writing research for disciplinary outlets.

Credit Only Granted for: JOUR711 or JOUR776.

Formerly: JOUR711.

JOUR777 Advanced Historical/Critical Methods in Journalism and Public Communication (3 Credits)

Critical assessment of qualitative approaches to public communication. Introduction to significant schools of historical and critical research. Advanced techniques for inquiry and manuscript preparation. Students must have a dissertation research project requiring historical or critical theory.

Credit Only Granted for: JOUR712 or JOUR777.

Formerly: JOUR712.

JOUR779 Seminar in Research Problems (1-3 Credits)

Methods of research design and analysis in specialized areas of journalism and public communication research.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: JOUR779 or JOUR780.

Formerly: JOUR780.

JOUR798 Master's Professional Fieldwork (1-6 Credits)

Research for and preparation of news articles or programs for use in the media. Analysis of fieldwork experience using communication theory and research results. Fieldwork may be done independently or as an internship. Repeatable to a maximum of six credits.

Repeatable to: 6 credits.

JOUR799 Master's Thesis Research (1-6 Credits)**JOUR800 Introduction to Doctoral Study in Journalism and Public Communication (3 Credits)**

Basic skills in journalism and public communication research.

Credit Only Granted for: JOUR700 or JOUR800.

Formerly: JOUR700.

JOUR801 Advanced Public Communication Theory (3 Credits)

Advanced selected survey of communication & media theory.

Prerequisite: JOUR601, or students who have taken courses with comparable content may contact the department.

JOUR808 Doctoral Colloquium (1-3 Credits)

Guided discussion of professional and theoretical topics.

Prerequisite: Must have completed or be concurrently enrolled in JOUR800.

Repeatable to: 4 credits if content differs.

JOUR818 Seminar in Communication Theories and Journalism Practice (3 Credits)

Critical examination of existing theory and/or journalism practices suggesting hypotheses and formulating proposals for future research.

Prerequisite: Must have completed or be concurrently enrolled in JOUR800.

Repeatable to: 6 credits if content differs.

JOUR888 Doctoral Professional Field Work (1-9 Credits)

Critical analysis of a phase of a professional field in journalism and public communication. Analysis of professional activity through personal observation. Evaluation of the purpose, process, effectiveness, and efficiency of professional activity. Recommendations for training and further research.

Repeatable to: 9 credits if content differs.

Formerly: PCOM888.

JOUR889 Doctoral Tutorial in Journalism and Public Communication (1-9 Credits)

Individual research in journalism and public communication.

Repeatable to: 9 credits if content differs.

Formerly: PCOM889.

JOUR898 Pre-Candidacy Research (1-8 Credits)**JOUR899 Doctoral Dissertation Research in Journalism and Mass Communication (1-8 Credits)**

Formerly: PCOM899.

JWST - Jewish Studies

JWST408 Honors Seminar in Jewish Studies (3 Credits)

An in-depth exploration of a theme in Jewish history, literature, culture or thought. Course subject and readings will vary from year to year, but will generally cut across periods, locations, or disciplines. Students are expected to engage the course material critically and to use the seminar as an opportunity to develop an independent research agenda.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Restriction: Junior standing or higher.

JWST409 Research Seminar in Jewish Studies (3-4 Credits)

A capstone course for Jewish Studies. Guides students through advanced source material and subject matter, research skills, and presentation techniques. A substantive paper based on independent research and analysis is one expected outcome.

Prerequisite: Must have completed two upper-level courses in an appropriate area of Jewish Studies; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 9 credits if content differs.

Formerly: JWST309.

JWST418 Honors Thesis Research in Jewish Studies (3-6 Credits)

Guided research on a thesis under the supervision of the Jewish Studies faculty.

Repeatable to: 6 credits if content differs.

JWST419 Special Topics in Jewish Studies (3 Credits)

Repeatable to: 9 credits if content differs.

JWST427 The Epic of Gilgamesh (3 Credits)

One of the most famous tales from the ancient world, the Epic of Gilgamesh inspires readers with tales of friendship and loss, mortality, and the search for meaning. The story itself grew and changed over time and took on new meanings. Through study of the epic, its development over time, and the sources it drew from, this class will examine the meaning of the Gilgamesh epic and its impact on ancient Mesopotamian culture.

Prerequisite: JWST225, RELS225, HIST2191, or permission of the instructor.

Recommended: JWST262, ENGL262, or HEBR298B.

Cross-listed with: RELS427.

Credit Only Granted for: JWST419G, RELS419G, RELS427 or JWST427.

Formerly: JWST419G.

JWST429 Advanced Topics in Jewish Studies (3-4 Credits)

Special topics at an advanced level for Jewish Studies. Primarily intended for majors and graduate students.

Repeatable to: 12 credits if content differs.

JWST430 Dead Sea Scrolls (3 Credits)

A study of the Dead Sea Scrolls in their ancient and modern settings, and in terms of contemporary scholarly interpretations of their meaning. Interpretations of the historical significance of these documents, their connections to ancient Jewish sectarian movements, and their implications for our understanding of Judaism, Christianity, and the history of the Bible.

Prerequisite: Must have completed one JWST course or one RELS course; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies. Cross-listed with RELS430.

Credit Only Granted for: JWST430 or RELS430.

JWST432 Jews in Medieval Times 1000-1450 (3 Credits)

Social and cultural life of Jewish communities spread throughout Islam and Christendom. Major topics include the Gaonate, kehila organizations, legal, rationalist, and mystical thought, and the context of rising animosity against Jews linked to the Crusades and changing Church doctrines.

Recommended: HIST282, HIST330, HIST331, or JWST234.

Cross-listed with: HIST476.

Credit Only Granted for: HIST476 or JWST432.

JWST452 The Golden Age of Jewish Philosophy (3 Credits)

Jewish philosophy from Maimonides in the 12th century to the expulsion of the Jews from Spain at the end of the 15th Century. Topics include the limitations of human knowledge, creation of the world, foreknowledge and free will, and the existence of God.

Prerequisite: 3 credits in PHIL courses; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies; or permission of ARHU-Philosophy department.

Cross-listed with: PHIL417.

Credit Only Granted for: JWST452 or PHIL417.

JWST459 Readings in Medieval Hebrew (3-4 Credits)

Readings and analysis of Hebrew texts and literature from the Middle Ages. Language of instruction in English; all texts in Hebrew.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: JWST459 or JWST466.

Formerly: JWST466.

JWST468 Readings in the Hebrew Bible (3-4 Credits)

Readings in the Hebrew text of the Bible. Emphasis in close reading, grammar analysis, and modern interpretations of the Bible. Language of instruction English; all texts in Hebrew.

Prerequisite: HEBR313; or permission of instructor.

Repeatable to: 9 credits if content differs.

Formerly: HEBR441 and HEBR442.

JWST469 Readings in Rabbinic Hebrew (3-4 Credits)

Readings in classical rabbinic texts and related corpora. Emphasis on grammar and reading skills as well as critical analysis of the material. Language of instruction: English; all texts in original language.

Prerequisite: HEBR313; or permission of instructor.

Repeatable to: 9 credits if content differs.

JWST471 Modern Hebrew Literature in Translation (3 Credits)

An exploration of modern Hebrew prose, poetry, and literary essays written from the 1880s through the present in Europe, Palestine, and Israel. An investigation of the challenges confronting authors such as Mendele Mokher Sforim, Avraham Mapu, Chaim Nahman Bialik, Dvorah Baron, S.Y. Agnon, and David Fogel as they tried to create a contemporary secular literature out of an ancient sacred language. All texts in English translation.

JWST478 Readings in Modern Hebrew (3 Credits)

Variable topics in Modern Hebrew Literature.

Prerequisite: HEBR313; or permission of instructor.

Restriction: Junior standing or higher.

Repeatable to: 12 credits if content differs.

JWST491 Judaism and the Construction of Gender (3 Credits)

The study of Jewish culture, religious practice, communal authority, and literature through the frame of such critical categories of analysis as gender, sexuality, masculinity, power, ethics, and the feminine.

Prerequisite: 1 course in JWST; or 1 course in LGBT; or 1 course in WMST or WGSS.

Cross-listed with: WGSS491.

Credit Only Granted for: JWST491, WMST491 or WGSS491.

Formerly: WMST491.

JWST492 Sex, Gender, and Jewish Identity (3 Credits)

An exploration of Jewish embodiment, including dynamics related to biological sex, culturally-framed gender, and sexuality. Topics of discussion may include transgender and intersex Jews, stereotypes and gender performance, modesty, genetics, and body alteration. Focus is on contemporary Jewish culture, framed within the larger historical and textual tradition.

Prerequisite: 1 course in WGSS; or 1 course in JWST; or 1 course in LGBT; or permission of instructor.

Cross-listed with: LGBT448W, WGSS492.

Credit Only Granted for: JWST492, JWST409G, LGBT448W, WMST498W or WGSS492.

Formerly: WMST498W and JWST409G.

JWST498 Advanced Language Module for Jewish Studies (1-3 Credits)

A supplementary language module for students enrolled in designated Jewish Studies classes. Language of instruction English, texts in original language.

Prerequisite: HEBR212 or JWST282; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

JWST499 Independent Study in Jewish Studies (1-3 Credits)

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 6 credits if content differs.

JWST600 General Seminar in Jewish Studies (3 Credits)

Introduce graduate students to the fields, problems, and basic methods of research in the contemporary practice of Jewish Studies. Consideration of chronological and historiographical problems, questions of the development of Jewish thought and literature and Jewish religious and cultural history in four rough chronological periods: Biblical Israel, Judaism in Antiquity, Judaism in the Middle Ages and Early Modern Period, and Modern Judaism.

JWST609 Supervised Instruction-Practicum in Jewish Studies (1 Credit)

Supervised instruction or supervised practicum in Jewish Studies. Intended for graduate students whose course work includes field work or classroom teaching.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

JWST619 Directed Readings in Jewish Studies (3 Credits)

Independent Study in Jewish Studies. Readings and papers.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

JWST648 Readings in Jewish History (3 Credits)

Focus on the central issues in Jewish history as well as the key historiographical debates on those issues.

Repeatable to: 9 credits if content differs.

JWST658 Readings in Jewish Thought and Culture (3 Credits)

Examines key issues in the development of Jewish thought and culture.

Repeatable to: 9 credits if content differs.

JWST678 Readings in Jewish Literature (3 Credits)

Examines selected themes or literatures in the development of Jewish literary traditions.

Repeatable to: 9 credits if content differs.

JWST699 Independent Graduate Readings in Jewish Studies (1-3 Credits)

Independent readings or guided research in a field of Jewish Studies with a member of the Jewish Studies graduate faculty.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 12 credits if content differs.

JWST719 Readings in Jewish Studies (3 Credits)

Course exposes students to significant primary and secondary material on selected topics as well as the major methodological problems covered by professional scholars working on these topics.

Repeatable to: 99 credits if content differs.

JWST799 Masters Thesis Research (1-6 Credits)

Research and Writing the Masters Thesis in Jewish Studies.

Repeatable to: 6 credits.

KNES - Kinesiology

KNES400 The Foundations of Public Health in Kinesiology (3 Credits)

An investigation of the role of physical activity and inactivity in relation to health and well-being through a public health perspective. Past and current perspectives on health promotion, health education, and social policies and approaches will be examined for various populations.

Prerequisite: Minimum grade of C- in KNES287.

Restriction: Senior standing or higher; and must be in a major within the SPHL-Kinesiology department.

KNES401 Zip Code: Prediction of Physical Activity & Health (3 Credits)

An exploration of the relationship and impacts of built and other social environments on health, including physical activity, social equity, gentrification, and many others.

Prerequisite: Minimum grade of C- in SPHL100.

Restriction: Must have earned a minimum of 75 credits; and must be in a major within, SPHL-Kinesiology department.

KNES402 Biomechanics of Sport (3 Credits)

Mechanical determinants influencing sport techniques. A quantitative, scientific basis for sport analysis with emphasis on the application to numerous sport activities. Evaluation and quantification of the filmed performance of athletes.

Prerequisite: Minimum grade of C- in KNES300.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES405 Principles & Techniques of Manual Muscle Testing (3 Credits)

It is critical for sports medicine and sport performance specialists to understand the location and inter-relationships of the structures of the body that impact human movement. Thus, the primary purpose of this course is to facilitate an in-depth, understanding of the muscles of the body. Specifically, students will learn the origins, insertions, primary and secondary functions, as well as nervous innervations of the major muscle groups of the body. In addition, students will develop palpation skills and learn to grade the function of each muscle through manual muscle testing techniques. These skills form the foundation for assessing functional movement as well as performing safe and effective manual therapy techniques. Thus, while the focus of the class will be to develop sound, introductory palpation and manual muscle testing skills, basic principles of functional movement and manual therapy will also be addressed through hands-on application as well as case study.

Prerequisite: Minimum grade of C- in BSCI201 and BSCI202; and 1 course with a minimum grade of C- from Kinesiology core courses at the 300-level or higher.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

Additional Information: This course emphasizes hands-on application of skills. Course participation is critical.

KNES440 Psychology of Athletic Performance (3 Credits)

Examines the psychological factors, mechanisms, and processes in athletic performance. Utilizes a social psychological approach to focus on the study and review of individual performance in both the interpersonal and social context.

Prerequisite: Minimum grade of C- in KNES350.

Restriction: Must have earned a minimum of 75 credits.

KNES442 Psychology of Exercise and Health (3 Credits)

Examines the antecedents and consequences of exercise behavior. Explores motivation, attitude, control, socialization. Proposes intervention strategies at the individual, organizational and societal levels.

Prerequisite: Minimum grade of C- in KNES350.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES445 Exercise and Brain Health (3 Credits)

Examines the evidence for exercise to affect brain function and brain health in children, in adults, and in old age. Covers the adaptations to acute and chronic exercise within brain networks related to emotion, stress reactivity, memory, and executive function, and the effectiveness of physical activity and exercise as treatments for depression, anxiety disorders, and cognitive impairment.

Prerequisite: Minimum grade of C- in KNES350.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES450 From the Olympics to the Rehabilitation Clinic: Mental Skills Training Applications (3 Credits)

The examination and application of the major concepts of human performance psychology in, and beyond, the professional, collegiate, amateur and youth sport athletic spaces to allied health practitioner (PT, OT, OR, PA, RN), athletic and personal training, and tactical athlete (i.e., military, law enforcement, and firefighting) environments. An essential component of the class will be the reliance on reading and reviewing both classic articles and the recent evidence-based research in which applied strategies and techniques are based. Students will be taught to critically analyze the research by 1) understanding the purpose of the research, 2) identifying the experimental design and how it contrasts the difference between experimental and control conditions, 3) understanding the outcome of the research, and 4) understanding how the outcome of the research may be applicable to the human performance and allied health environments.

Prerequisite: Minimum grade of C- in KNES350.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

Credit Only Granted for: KNES498G or KNES450.

Formerly: KNES498G.

KNES451 Children and Sport: A Psychosocial Perspective (3 Credits)

Examination of youth sports from a psychosocial perspective, including the impact of highly structured sports on young athletes and the complex social network of coaches, parents and peers.

Prerequisite: Minimum grade of C- in KNES350.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES455 Scientific Bases of Athletic Conditioning (3 Credits)

An examination of physical fitness/athletic conditioning programs stressing the practical application of exercise physiology theory for enhancing athletic performance. Cardiovascular considerations, strength and power development, nutrition, speed, muscular endurance, environmental considerations and ergogenic aids.

Prerequisite: Minimum grade of C- in KNES360.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES457 Managing Youth Programs: Educational, Fitness and Sport (3 Credits)

An examination of the basic functions involved in managing physical education, fitness, and youth sports programs. Focus on leadership skills, organizational management, and techniques for applying learned skills in a variety of organizational settings that serve the nation's youth.

Prerequisite: Minimum grade of C- in KNES350 and KNES370.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES460 Physiology of Aging and the Impact of Physical Activity (3 Credits)

Biology of the aging process in healthy individuals and those with chronic disease, the effects of acute exercise and exercise training on the physiological decline that occurs in humans, and the role that regular physical activity plays on enhancing the quality of life and activities of daily living in individuals.

Prerequisite: 1 course with a minimum grade of C- from (KNES320, KNES360).

Restriction: Must be in one of the following programs (Kinesiology; Public Health Science); and must have earned a minimum of 75 credits.

KNES461 Exercise and Body Composition (3 Credits)

An in-depth overview on how body composition is measured, what it is composed of, and the physiological and biochemical signals that change it. The effects of acute and chronic exercise on food storage, breakdown, and use as an energy source, is the major focus. This information is applied to important issues in public health and athletic performance.

Prerequisite: 1 course with a minimum grade of C- from (KNES320, KNES360).

Restriction: Must be in one of the following programs (Kinesiology; Public Health Science) ; and must have earned a minimum of 75 credits.

KNES462 Neural Basis of Human Movement (3 Credits)

An introduction to the neural substrates which underlie postural and volitional movement. Neuroanatomical and neurophysiological basis of motor functioning; past and present conceptualizations of motor control and coordination; movement disorders; and maturation of the neuromuscular system.

Prerequisite: Minimum grade of C- in BSCI201, BSCI202, and KNES385; or permission of SPHL-Kinesiology department.

Restriction: Must have earned a minimum of 75 credits.

KNES463 Principles and Methods of Physical Activity Interventions (3 Credits)

Understanding of the planning, implementation, and evaluation of physical activity interventions. Intervention methods and practical strategies fo formulate well-conceived physical activity interventions across a variety of settings and participant populations.

Prerequisite: Minimum grade of C- in KNES350 and KNES360.

Restriction: Must have earned a minimum of 75 credits.

KNES464 Exercise Metabolism: Role in Health and Disease (3 Credits)

Examines the role of metabolism in kinesiology, especially as it relates to physical inactivity, health and disease. Includes bioenergetics, substrate utilization, cell signaling, and metabolic gene expression and their impact on chronic health conditions or disease.

Prerequisite: Minimum grade of C- in KNES360.

Restriction: Must have earned a minimum of 75 credits.

KNES465 Physical Activity and Disease Prevention and Treatment (3 Credits)

Critically examines the scientific evidence that supports the use of physical activity to prevent and treat age-related diseases, including cardiovascular disease, diabetes, abnormal lipoprotein-lipid levels, hypertension, obesity, osteoporosis and cancer.

Prerequisite: 1 course with a minimum grade of C- from (KNES320, KNES360).

Restriction: Must have earned a minimum of 75 credits.

KNES466 Graded Exercise Testing (3 Credits)

Functional and diagnostic examination of the cardiovascular responses to graded exercise testing. Emphasis on electrophysiology, mechanisms of arrhythmias, normal electrical activation of the heart, axis termination and the normal 12-lead electrocardiogram.

Prerequisite: Minimum grade of C- in KNES360.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES467 Genetics in Physical Activity and Sport (3 Credits)

Dedicated to understanding the role of genetics in kinesiology, especially within the contexts of physical activity and sport. Specific genes and phenotypes will be explored.

Prerequisite: Minimum grade of C- in KNES360. And must be concurrently enrolled in STAT100 or have completed STAT100 with a minimum grade of C-; or students who have taken courses with comparable content may contact the department.

Restriction: Must have earned a minimum of 75 credits.

KNES474 Quantitative Methods in Cognitive Motor Behavior - MATLAB (3 Credits)

Includes basic computer programming, algorithm, and quantitative techniques for time-series data with an emphasis on, but not limited to, human movement. These topics will be taught using MATLAB, a programming language and environment for numerical computation, data analysis, and visualization.

Prerequisite: MATH115 or equivalent; or permission of Kinesiology department.

Recommended: MATH240.

Restriction: Must have earned a minimum of 75 credits.

KNES476 Honors Thesis Proposal (3 Credits)

Development of honors thesis proposal based on preliminary research and literature review. Presentation of formal proposal to the thesis committee and fellow honors students.

Corequisite: KNES478.

Restriction: Must be a KNES Honors student; and senior standing.

KNES477 Honors Thesis (3 Credits)

Advisement will be on the individual basis. Thesis must be defended in the honors seminar.

Prerequisite: KNES476.

Corequisite: KNES478.

Restriction: Must be a KNES Honors student; and senior standing.

KNES478 Honors Seminar (1-3 Credits)

Guided discussion of research topics of current interest.

Restriction: Must be a KNES Honors student; and junior standing or higher.

Repeatable to: 4 credits if content differs.

KNES482 Socio-behavioral Aspects of Human Movement (3 Credits)

Derivation, formulation, and application of research in the socio-behavioral aspects of human movement.

Prerequisite: KNES293, KNES350, and KNES287.

KNES483 Sport Marketing and Media (3 Credits)

Industry practices in sport marketing and media. Marketing strategies and consumer behavior in different sport contexts. Critical examination of selected social and economic issues related to the buying and selling of sport.

Prerequisite: Minimum grade of C- in KNES287.

Recommended: KNES355.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES484 Sporting Hollywood (3 Credits)

Popular representations of sport within the film media related to wider social discourses on bodies and the politics of various categories of subjectivity (gender, sex, race, class and nationality).

Prerequisite: Minimum grade of C- in KNES285 and KNES287.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES485 Sport and Globalization (3 Credits)

Examination of sport culture from a global perspective; focuses on theorizing the similarities and differences between various national sporting cultures.

Prerequisite: Minimum grade of C- in KNES287.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES487 Women, Sports and Culture (3 Credits)

A study of the historical barriers to women's participation in physical activity, efforts to dismantle those barriers, and the differentiation that exists in women's sport and physical culture today. Exploration of the historical and contemporary factors involving female athletes in U.S. culture.

Prerequisite: Minimum grade of C- in KNES287.

Restriction: Must be in a major within the SPHL-Kinesiology department; and must have earned a minimum of 75 credits.

KNES497 Kinesiology Senior Seminar (3 Credits)

Discussions of contemporary issues vital to the discipline, critiques of research in the student's area/areas of special interest, completion of a major project where the student will be asked to demonstrate the ability to carry out investigative processes in problem solving and critical writing under faculty direction.

Prerequisite: A professional writing course with a minimum grade of C-; and must have completed 6 KNES core courses and 2 KNES option courses, all with a C- or higher; and must have completed STAT100 with a C- or better.

Restriction: Senior standing or higher; and must be in Kinesiology program; and permission of department.

KNES498 Special Topics in Kinesiology (3 Credits)

Topics of special interest in areas not covered by regularly scheduled courses.

Prerequisite: Permission of SPHL-Kinesiology department.

Repeatable to: 99 credits if content differs.

KNES600 Kinesiology in Public Health (3 Credits)

A broad introduction to public health within the context of the discipline of kinesiology, focusing on furthering the understanding of the ways kinesiology contributes toward achieving the goals of public health.

KNES601 Epidemiology of Physical Activity (3 Credits)

An exploration of basic epidemiological study design, methods, and health outcomes in the field of physical activity.

Prerequisite: KNES600; and must have completed an undergraduate statistics course (e.g., STAT100 or equivalent).

KNES602 Physical Activity Program Planning and Evaluation (3 Credits)

An in-depth analysis of the planning, implementation, and evaluation of physical activity interventions and programs intended to achieve physical activity and public health goals.

Recommended: KNES600.

KNES603 Research Methods in Kinesiology & Public Health (3 Credits)

The purpose of this course is to expose students: (1) to some of the key issues involved in physical activity and public health related research, and (2) the process of conducting and communicating research. In addition to learning the central aspects of a range of quantitative and qualitative research methods, students will gain practice evaluating and synthesizing existing research, as well as writing a research proposal specific to a topic of their choice.

Prerequisite: KNES600, KNES601, and KNES602.

KNES604 Development of Posture and Locomotion (3 Credits)

Development of posture and locomotion in humans integrating the perspectives of biomechanics, neurophysiology, perception-action theory and dynamical systems.

KNES609 Research Issues in Kinesiology (1-3 Credits)

Issues, methodologies, and critical analyses of current research in Kinesiology.

Prerequisite: Permission of SPHL-Kinesiology department.

Repeatable to: 6 credits.

KNES610 Methods and Techniques of Research (3 Credits)

Studies methods and techniques of research used in Kinesiology; an analysis of examples of their use; and practice in their application to problems of interest to the student.

KNES612 Qualitative Research Methods in Physical Cultural Studies (3 Credits)

Prepares students to design, prepare, and produce independent research projects in Physical Cultural Studies (PCS). Topics include: the philosophy of PCS through its epistemological, ontological, and axiological bases; the politics of PCS as an interventionist project; and the practice of PCS as critical pedagogy, within research methodologies, and through the ways in which PCS work is analyzed and expressed.

KNES613 Theories Physical Culture (3 Credits)

Examines and assesses numerous social and cultural theories as frameworks for critically interpreting the varied institutions, ideologies, and embodiments of physical culture.

Credit Only Granted for: KNES613 or KNES689I.

Formerly: KNES689I.

KNES614 Cultural Studies and Physical Culture (3 Credits)

Discusses the political commitments, constituents, and complexities of cultural studies, and their relevance for furthering the understanding of physical culture and the project of physical cultural studies.

Credit Only Granted for: KNES614 or KNES689P.

Formerly: KNES689P.

KNES615 The Body, Culture, and Physical Activity (3 Credits)

Critically examines the social constitution and embodied experience of various empirical fields of physical culture, including sport, health, movement, exercise, recreation dance, and daily living related activities.

KNES616 Physical Cultural Studies (3 Credits)

Provides an introduction to the derivation, elements, focus, and future of the Physical Cultural Studies project, specifically related to the empirical, theoretical, methodological, and axiological aspects of Physical Cultural Studies.

Credit Only Granted for: KNES616 or KNES689B.

Formerly: KNES689B.

KNES618 Current Readings in Exercise and Applied Physiology (1 Credit)

Student-led presentations of contemporary literature in the areas of genetics, exercise science, fitness and health. Emphasis on papers describing new research findings, novel techniques, innovative methods, and emerging issues.

Prerequisite: KNES360; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: KNES618, KNES609P, or KNES609N.

KNES619 Current Readings in Physical Cultural Studies (1 Credit)

Student led presentations of contemporary literature in physical cultural studies and related areas. Emphasis on material describing new empirical and/or theoretical insights, innovative methods, and emerging issues.

Repeatable to: 10 credits.

Credit Only Granted for: KNES609 or KNES619.

Additional Information: Priority enrollment for students in Kinesiology in the Physical Cultural Studies specialization area.

KNES621 Teaching Elementary Physical Education (3 Credits)

Students will learn aspects of teaching elementary physical education including: characteristics of elementary school students, testing, grading, teaching lifetime skills, and effective teaching techniques using SHAPE America Standards.

Restriction: Must be enrolled in Pre-K to 12 Physical Education Master of Education program.

Credit Only Granted for: KNES689V or KNES621.

Formerly: KNES689V.

KNES622 Teaching Secondary Physical Education (3 Credits)

Students will learn aspects of teaching secondary physical education including: characteristics of secondary school students, testing, grading, teaching lifetime activities, and effective teaching techniques using SHAPE America Standards.

Restriction: Must be enrolled in PreK-12 Physical Education Master of Education program.

Credit Only Granted for: KNES689I OR KNES622.

Formerly: KNES689I.

KNES628 PCS Research & Writing Workshop (3 Credits)

This directed and project focused writing workshop provides students in Physical Cultural Studies, and related fields, the opportunity to develop a processual understanding of the writing craft, focused on enhancing academic writing and editing skills, practices, and routines.

Repeatable to: 6 credits.

Credit Only Granted for: KNES628 or KNES789P.

Formerly: KNES789P.

KNES630 Sociology of Sport in Contemporary Perspective (3 Credits)

Studies social organization and the role of individuals and groups in sport situations: the interrelationship of sport with traditional social institutions; sport as a sub-system and its structure; and sport and social problems.

KNES643 Public Health & Physical Activity in the Classroom (3 Credits)

The purpose of the course is to engage students in developing curriculum that blends movement activity with courses such as math, science, social studies, literature, writing, art, and music to teach traditional classroom courses as an instrument of public health.

Recommended: KNES600.

Restriction: Must be in the Master of Public Health program; or permission of the Kinesiology Department.

KNES645 Exercise and Brain Health (3 Credits)

Examines the evidence for exercise to affect brain function and brain health in children, in adults, and in old age. Covers the adaptations to acute and chronic exercise within brain networks related to emotion, stress reactivity, memory, and executive function, and the effectiveness of physical activity and exercise as treatments for depression, anxiety disorders, and cognitive impairment.

Prerequisite: Minimum grade of C- in KNES350; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: KNES645 or KNES689X.

Formerly: KNES689X.

KNES651 Motor Control & Synergy (3 Credits)

Students will learn the history, concepts, theories, computations, and pathology regarding motor synergies of human movements.

Credit Only Granted for: KNES651 or KNES789P.

Formerly: KNES789P .

KNES658 Teaching Internship in Physical Education (1-6 Credits)

The MCERT PE internship is an intense experience that immerses interns into the life of their assigned Secondary school. The internship experience is designed to provide our pre-service teachers with a rich opportunity to learn the craft of teaching through close observation of experts as well as practice in the planning, delivery and assessment of instruction.

Restriction: Must be in the Pre-K to 12 Physical Education Master of Education program.

Repeatable to: 6 credits.

Credit Only Granted for: KNES658 or KNES689T.

Formerly: KNES689T.

KNES660 Psychology of Athletic Performances (3 Credits)

Psychological factors, mechanisms, and processes in athletic performance. The basic approach is social psychological, according to which the focus is on individual performance in the interpersonal athletic context. Intrapersonal and interpersonal factors and their effects on athletic performance. Psychology of peak performance, choking, and errors of mental control. Analysis of the general principles and types of mental training.

Prerequisite: KNES350.

Credit Only Granted for: KNES660 or KNES689Z.

Formerly: KNES689Z.

KNES662 Psychology of Exercise and Health (3 Credits)

Examines the antecedents and consequences of exercise behavior. Explores motivation, attitude, control, socialization. Proposes intervention strategies at the individual, organizational and societal levels.

Prerequisite: KNES350; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: KNES662 or KNES689O.

Formerly: KNES689O.

KNES663 History of Sport in Western Culture (3 Credits)

The history of sport in the ancient, medieval and renaissance West.

KNES670 Biomechanics Theory (3 Credits)

Theoretical basis for understanding the investigation of biomechanical aspects of the human body. Integration of subject matter from physics, engineering, anatomy, kinesiology, and physiology as it relates to the study of human motion and the body as a mechanical system.

Prerequisite: MATH121 or MATH141; or must have completed MATH221.

KNES674 Quantitative Methods in Cognitive Motor Behavior (3 Credits)

Includes basic computer programming, algorithm, and quantitative techniques for time-series data with an emphasis on, but not limited to, human movement. These topics will be taught using MATLAB, a programming language and environment for numerical computation, data processing, analysis, and visualization.

Recommended: Proficiency in Precalculus and Linear Algebra or permission of department.

Credit Only Granted for: KNES689R or KNES674.

Formerly: KNES689R.

KNES676 Multisensory Perception and Human Motor Control (3 Credits)

Overview of the major sensory inputs to human motor control and spatial orientatin including auditory, somatosensory, visual and vestibular.

KNES678 Professional Seminar for Teacher Development in Physical Education (1-3 Credits)

The spring seminar course is an extension of the fall seminar course and spring internship course. It accompanies a full time undergraduate level teaching internship and is intended to support and extend students' field experience learning. The spring seminar course is designed to continue to provide students with the support they need to successfully meet the College of Education's Middle School Mathematics and Science programmatic requirements and the Maryland State Department of Education's Middle School Mathematics and Science Teacher Certification Requirements. These requirements include demonstrating mastery on all of the College of Education's Foundational Competencies (FCCs) and Performance Based Assessments (PBAs) and the national edTPA, InTASC, and AMLE Standards.

Restriction: By permission only for graduate students enrolled in the KNES MCERT program.

Repeatable to: 3 credits.

KNES689 Special Problems in Kinesiology (1-6 Credits)

Master or doctoral candidates who desire to pursue special research problems under the direction of their advisor may register for 1-6 hours of credit under this number.

KNES691 Muscular Aspects of Exercise Physiology (3 Credits)

Skeletal muscle structure and function including muscle development, excitation-contraction coupling, muscle fiber types and fatigue, muscle biochemistry, gene expression, muscle damage and regeneration. The effects of aging and exercise training on skeletal muscle.

Prerequisite: KNES360.

Recommended: BSCI422.

KNES692 Cardiovascular Aspects of Exercise Physiology (3 Credits)

A comprehensive consideration of the various cardiovascular factors affecting human physical performance. Emphasis on the regulation of cardiovascular functions during physical activity. Energy liberation and transfer, circulation, respiration, temperature regulation, physiology of work at altitudes, aerobic endurance training, and exercise, health and aging.

Prerequisite: KNES360.

KNES694 Metabolic Aspects of Exercise Physiology (3 Credits)

Effects of exercise on digestion, absorption, transport, storage, mobilization, and utilization of macronutrients. Emphasis on the effects of exercise training on energy metabolism.

Prerequisite: KNES360.

Recommended: BCHM462 and BCHM461.

KNES695 Laboratory Techniques in Exercise Physiology (3 Credits)

Lab exercise testing techniques and interpretation. Includes graded exercise testing, VO₂ max, lactate threshold, phlebotomy, exercise economy, body composition, muscle biopsy, resting metabolic rate, anaerobic power and blood flow.

Prerequisite: KNES360.

KNES711 Professional Development and Grantsmanship (3 Credits)

Enhance continued professional development through an exploration of culture, climate, expectations and mentoring in research I universities. Generate a grant application including the hypothesis, structure, specific aims, background and significance, and submission of a total grant. Grant process and product will be emphasized.

Restriction: Must be a Doctoral student; and must be in a major in SPHL-School of Public Health.

Credit Only Granted for: KNES711 or KNES789X.

Formerly: KNES789X.

KNES751 Advanced Neuromechanics (3 Credits)

Covers the neurophysiological mechanisms relevant to the processes of generating voluntary movements. The course promotes independent thinking of students and enhances knowledge of basic facts about the design of cells, muscles, neuronal structures, and the whole body for the understanding of typical and atypical movement production related to the nervous system and the functioning brain.

Recommended: Undergraduate-level biomechanics and motor control or equivalents.

Credit Only Granted for: KNES751 or KNES789A.

Formerly: KNES789A.

KNES778 Practical Experience in Physical Activity and Public Health (1-4 Credits)

The practical experience is a time-limited, supervised period of public/community health activities carried out in a health or allied health organization involved with physical activity. Students gain practical experience in areas such as program planning and implementation, program evaluation, public policy analysis, research, and management.

Prerequisite: KNES600, KNES601, and KNES602.

Repeatable to: 4 credits.

Credit Only Granted for: KNES778 or KNES785.

KNES780 Preparation for Capstone Project in Physical Activity and Public Health (3 Credits)

Provides detailed preparation for the culminating experience in which the student applies knowledge and skills learned in the MPH program to conduct independent work on a physical activity problem under the supervision of a faculty advisor. Students will gain proficiency in conducting literature research and reviews, analyzing research methodology for appropriateness for their individual capstone projects, identifying gaps in the literature to support potential capstone topics, and preparing the capstone proposal presentation.

Recommended: Quantitative/Qualitative research methods course.

Restriction: Must be in the Master of Public Health program; or permission of the Kinesiology Department.

Additional Information: This course is also available for students in programs other than PHAO. Priority enrollment reserved for MPH in PA students.

KNES785 Internship in Physical Activity and Public Health (3 Credits)

The internship is a time-limited, supervised period of public/community health activities carried out in a health or allied health organization involved with physical activity. Students gain practical experience in areas such as program planning and implementation, program evaluation, public policy analysis, research, and management.

Prerequisite: EPIB610, EPIB650, HLSA601, HLTH665, KNES600, KNES601, and MIEH600.

Recommended: KNES602.

Credit Only Granted for: KNES778 or KNES785.

KNES786 Capstone Project in Physical Activity and Public Health (3 Credits)

The culminating experience in which the student applies knowledge and skills learned in the MPH program to conduct independent work on a physical activity problem under the supervision of a faculty advisor.

Prerequisite: KNES600, KNES601, and KNES602.

KNES789 Advanced Projects in Kinesiology (1-3 Credits)

Advanced projects examining current problems and trends in kinesiology.

Repeatable to: 3 credits.

KNES798 Internship in Physical Education/Sports Management (1-8 Credits)

Practical application of previously acquired skills and knowledge in a sport and/or physical education setting. Emphasis on selected experiences to enhance the total academic program of the student. The internship site assignment will depend upon student's background and career goals.

Prerequisite: Permission of SPHL-Kinesiology department.

Repeatable to: 8 credits.

KNES799 Master's Thesis Research (1-6 Credits)**KNES898 Pre-Candidacy Research (1-8 Credits)****KNES899 Doctoral Dissertation Research (1-8 Credits)**

KORA - Korean

KORA499 Independent Study Korean (1-3 Credits)

Independent study under faculty supervision.

Prerequisite: Permission of instructor.

Repeatable to: 6 credits if content differs.

LARC - Landscape Architecture

LARC411 Construction Technology I: Principles of Site Engineering (4 Credits)

First of three courses in the landscape architecture engineering and construction sequence that focuses on the principles, procedures, and applications of site grading. Included in this subject area are the topics of relief visualization and representation, slope and contour calculations, grading objectives and methodology, structure siting principles, drainage principles, contour manipulation procedures, stormwater management, horizontal and vertical road alignment, and cut-fill calculations.

Corequisite: LARC231 or LARC641.

Restriction: Must be in Landscape Architecture program.

Credit Only Granted for: LARC320, LARC411 or LARC720.

Formerly: LARC320.

LARC412 Construction Technology II: Materials and Structures (4 Credits)

Second of three courses in the landscape architecture engineering and construction sequence focuses on site construction, soil and water-centric Best Design Practices (BDPs). Included in this subject area are the topics of construction operations and earthwork, soil erosion and sediment control, retaining wall, soil and constructed media, shoreline construction, bioretention and planting systems and green roofs

Prerequisite: LARC411.

Corequisite: LARC330 or LARC642.

Restriction: Must be in Landscape Architecture program.

Credit Only Granted for: LARC321, LARC412 or LARC721.

Formerly: LARC321.

LARC413 Construction Technology III: Water Soil-Centric Practices (4 Credits)

Third of three courses in the landscape architecture engineering and construction sequence focuses on site construction, soil and water-centric Best Design Practices (BDPs). Included in this subject area are the topics of construction operations and earthwork, soil erosion and sediment control, retaining wall, soil and constructed media, shoreline construction, bioretention and planting systems and green roofs.

Prerequisite: LARC412.

Restriction: Must be in Landscape Architecture program.

LARC420 Professional Practice (3 Credits)

An introduction to and comparative study of the professional concerns of design firms. Focus on planning, legal, ethical, marketing and management considerations of interdisciplinary practices.

Prerequisite: LARC321.

Restriction: Must be in Landscape Architecture program.

LARC421 Computer-Aided Design and Drafting (CADD): Urban Construction (3 Credits)

This Computer-Aided Design and Drafting (CADD) course applies computer drafting using AutoCAD. It focuses on providing the technical skills for students who are working in built environment professions. Drawing types may include (but not be limited to) site plan drawings, construction detailing, grading plans, site layout plans and sheet layout conventions.

Credit Only Granted for: LARC4890 or LARC421.

Formerly: LARC4890.

LARC430 Community Design Studio (5 Credits)

Studio that emphasizes the integration of critical thinking skills and methodologies introduced throughout the landscape architecture curriculum. Students apply design and analysis methodologies, evaluate alternative solutions, involve community residents and engage in final design development, using the master plan and site design process, report writing, and oral and graphic presentations. Final presentations are open to the university and the community.

Prerequisite: LARC331 and LARC413; and must have completed or be concurrently enrolled in LARC420.

Restriction: Senior standing; and must be in Landscape Architecture program.

LARC440 Urban Design Studio (5 Credits)

The landscape architect's role within the interdisciplinary urban design process, focusing on urban site design issues. Pedestrian friendly site design and the future of sustainable development will be studied.

Prerequisite: LARC321; and LARC340; and LARC341.

Restriction: Must be in Landscape Architecture program.

LARC451 Sustainable Communities (3 Credits)

Explores concepts, strategies and examples of community design which address the needs of a growing population while preserving the environment and its resources.

LARC452 Green Infrastructure and Community Greening (3 Credits)

A critical look and exploration of green infrastructure (GI) elements in the built environment in contributing to ecosystems services and the sustainability of the built environment. The course explores the science, issues, challenges, and the policy, planning and design solutions offered by green infrastructure.

Prerequisite: PLSC110 and PLSC111; or (PLSC112 and PLSC113); or permission of instructor.

Restriction: Junior standing or higher.

Credit Only Granted for: LARC489G or LARC452.

Formerly: LARC489G.

LARC453 Introduction to GIS and Hydrologic Modeling (3 Credits)

Introduction to Geographic Information Systems (GIS) and their application to hydrologic modeling. Basic GIS skills are used to manipulate and analyze spatial data to populate NRCS TR-55 hydrologic model for use in sizing constructed wetlands, bio-retention cells, and minor flood zones. No prior knowledge of GIS or hydrologic modeling is required. Stormwater and erosion control permitting as well as basic design principles for Maryland Environmental Site Design standards are introduced.

LARC454 Principles for Planting Design (3 Credits)

Emphasis will be placed on the analysis of natural systems of the landscape as they relate to visual thinking and to the rigor of the design process. Planting Design will familiarize you with native habitats, reinforce the application of design principles, and assess human response to the built environment in terms of developing a planting scheme. Students will acquire an understanding of and an appreciation for complex, interdependent relationships that exist in a healthy plant community. Students will graphically represent planting plans as communication tools suitable for client and contractor discussion as well as the basic construction documentation process through plant schedules, details, technical specifications, soil analysis, cost estimating, site preparation, and landscape maintenance procedures.

Prerequisite: PLSC253 or equivalent; and LARC220 or LARC620.

Restriction: Permission of Landscape Architecture program; and must be in Landscape Architecture program; or permission of Landscape Architecture program.

Credit Only Granted for: LARC454 or LARC489E.

Formerly: LARC489E.

LARC461 People and the Environment (3 Credits)

Focus is placed on human and environmental interactions. Students will look at both natural and built environments and how they influence human health and well-being. Many environmental settings will be examined. These include hospitals, public housing neighborhoods, school settings, retirement communities, transportation corridors and green spaces. We will also explore how racial and socio-economic factors affect living and working environmental conditions. Ultimately, students will be using this knowledge to create environments that support individuals, families and various community groups' health and well-being.

Credit Only Granted for: LARC489K or LARC461.

Formerly: LARC489K.

LARC470 Landscape Architecture Seminar (3 Credits)

A combination of self-directed study, seminar, and lecture formats. An introduction to aspects of research methods, critical analysis, and proposal writing with a focus on urban and community design.

Prerequisite: LARC321; and LARC341.

Corequisite: LARC440.

Restriction: Senior standing; and must be in Landscape Architecture program.

LARC471 Capstone Praxis Studio (5 Credits)

A capstone experience with projects of varied thematic content that emphasize the integration of critical thinking skills and methodologies introduced throughout the landscape architecture curriculum. Students apply design and analysis methodologies, evaluate alternative solutions, involve community residents and engage in final design development, using the master plan and site design process, report writing, and oral and graphic presentations. Final presentations are open to the university and the community.

Prerequisite: LARC430.

Restriction: Senior standing; and must be in Landscape Architecture program.

LARC489 Special Topics in Landscape Architecture (1-4 Credits)

Credit according to time scheduled and organization of course. A lecture and/or studio course organized as an in-depth study of a selected specialization of landscape architecture not covered by existing courses.

Prerequisite: Permission of AGNR-Plant Science & Landscape Architecture department.

Repeatable to: 4 credits if content differs.

LARC499 Independent Studies in Landscape Architecture (1-4 Credits)

Independent studies in landscape architecture including field, studio or library research under the direction of a faculty member.

Prerequisite: 12 credits in LARC courses; or permission of AGNR-Plant Science & Landscape Architecture department.

Restriction: Must be in Landscape Architecture program; or must be in Plant Sciences program.

Repeatable to: 4 credits if content differs.

LARC620 Graphic Tools for Landscape Representation (3 Credits)

This course integrates digital and analog methods of communication and provides an introduction to computer tools and techniques commonly used in landscape architecture practice. Non-drafting computer tools will be used to orient basic digital image capture, manipulation, and presentation formatting. Also includes techniques and application of various media for graphic communication associated with landscape architecture.

Corequisite: LARC640.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC621 Digital Drafting and Mapping (3 Credits)

The development and application of computing tools as used by the landscape architecture profession. Computer-Aided Design and Drafting (CADD) develops computer drafting skills using a variety of software programs. It also introduces students to Geographic Information Systems (GIS) mapping technologies, computational representations and modeling of landscape processes and solution methods for problems involving the special arrangement of land use activities.

Prerequisite: LARC620; or permission of AGNR-Plant Science & Landscape Architecture department.

LARC640 Graduate Studio I (5 Credits)

Principles and techniques of design as applied to shaping the landscape; developing concepts in visual thinking, environmental awareness, and design intervention through studio exercises and projects.

Corequisite: LARC620.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC641 Graduate Studio II (5 Credits)

Principles and techniques of site analysis, environmental design and site development for human settlements and interaction with natural systems. Will expand analytical skills through complex site design problems. Students will research, observe and apply low impact development and sustainable practices, become familiar with building and landscape types by investigating alternative arrangements on the land, and understand user needs and design for populations with a range of abilities. Will support LEED and sustainable practices and acknowledge the requirements of public health, safety, and welfare.

Prerequisite: LARC640.

Corequisite: LARC720.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC642 Graduate Studio III (5 Credits)

A focus on the interaction of landscape science (hydrology, geology, etc.) with the necessities and mechanisms of human settlements (transportation, economics, etc.) emphasizing innovative and forward thinking solutions to urbanization and ecological problems. It will apply this knowledge to landscape analysis, recreational planning and design, and community development, emphasizing resource management, spatial organization, landscape character, and the physical and social structure of community services. This course will be required for both Track 1 and Track 2 students.

Prerequisite: LARC641.

Corequisite: LARC670.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC648 Graduate Studio IV (5 Credits)

An exploration that will focus on issues in landscape planning and design such as campus planning, urban housing and recreation, and neighborhood preservation, restoration and development. Projects will emphasize the value of responsible academic and civic landscapes, the place of historic resources in contemporary life, and innovative solutions for the integration of past and future landscapes.

Prerequisite: LARC721 and LARC642.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

Repeatable to: 6 credits if content differs.

LARC661 Seminar in Landscape Architecture (1 Credit)

Explore the multifaceted realm of the profession and discipline for landscape architecture. Students will explore a select topic or technology for the intersection of nature, culture, and human intervention in shaping the built environment. Through critical readings or exercise, participants learn critical technologies, analyze historical precedents, contemporary theories, and design and planning practices. Engaging discussions and collaborative projects or exercise empower students to synthesize knowledge, fostering a holistic perspective.

Restriction: Must be in Landscape Architecture program .

LARC663 Landscape and Garden History (3 Credits)

History of garden making and its evolution into design practice. Students will become familiar with narratives of garden art and landscape architecture through the study of selected key sites, designers, and visual written sources. A focus on gardens' past and afterlife; the nature of primary sources (both built and written), and how these can be evaluated and used. Primary sources will be drawn from several disciplines and include a wide array of genres: treatises, epistolary exchanges, tax returns, novels, poems, paintings and drawings.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC670 Landscape Architecture Theory and Criticism (3 Credits)

Review and analysis of the body of literature concerning landscape architecture and relationships between humans and both natural and designed environments. Topics may include: rationalism, ethics, aesthetics, social and economic values, postmodernism, feminist, multiculturalism, ecological determinism, preservation/conservation, and sustainability and ecological design. Each week students will lead a debate and discussion on a theoretical issue based on the assigned readings for that week.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC671 Landscape Architecture Research Methods (3 Credits)

Investigation and discussion of broad scope of research methods and the development of landscape design and planning research techniques and skills. The urban environment will be viewed primarily as a social and psychological environment, with concern for who uses these environments and the conflicts that can arise between user groups.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC689 Special Topics in Landscape Architecture (1-6 Credits)

Special topics in landscape architecture

Repeatable to: 6 credits if content differs.

LARC699 Independent Studies in Landscape and Architecture (1-3 Credits)

Individual Instruction course.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

LARC720 Environmental Analysis and Site Engineering (3 Credits)

Techniques for prediction of alterations in social and natural processes brought about by human use of the land; application of such assessments to environmental management; basic methods of landscape alteration, augmentation, and control including grading, drainage, road and trail design, and stormwater management.

Prerequisite: LARC640; or permission of AGNR-Plant Science & Landscape Architecture department.

Corequisite: LARC641.

LARC721 Landscape Construction Methods and Materials (3 Credits)

Basic methods of constructing landscapes and manipulating the appropriate plant and inorganic materials for the creation of ecologically sustainable environments for human use. An examination of the use, properties, and detailing of materials used in landscape construction.

Prerequisite: LARC720.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

LARC748 Advanced Special Topics Studio (5 Credits)

Advanced special topics comprehensive landscape architecture studio-exploration will focus on cultural, behavioral and ecological issues in the physical planning and design of urban landscapes.

Prerequisite: LARC648 and LARC671.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

Repeatable to: 10 credits if content differs.

LARC799 Master's Thesis Research (1-6 Credits)

Development of a terminal thesis on a problem in landscape architecture, designed to demonstrate comprehensive skills and knowledge achieved in the graduate program. The subject will be selected in consultation with an advisor and periodically reviewed with a committee headed by the advisor.

Prerequisite: LARC748.

Restriction: Permission of AGNR-Plant Science & Landscape Architecture department.

Repeatable to: 12 credits if content differs.

LASC - Certificate in Latin American Studies

LATN - Latin

LATN405 Lucretius (3 Credits)

Readings are in Latin.

LATN410 Latin Historians (3 Credits)

Latin historical writing as a literary genre. Influences, style, and literary techniques. Readings are in Latin.

LATN415 Vergil's Aeneid (3 Credits)

Vergil's Aeneid: readings of selections in Latin and of the entire epic in English translation along with critical essays.

Formerly: LATN305.

LATN472 Historical Development of the Latin Language (3 Credits)

An analysis of the development of the Latin language from archaic times to the Middle Ages.

Credit Only Granted for: LATN472 or LING431.

LATN488 Latin Readings (3 Credits)

The reading of one or more selected Latin authors from antiquity through the Renaissance. Reports.

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits if content differs.

Additional Information: Readings are in Latin.

LATN499 Independent Study in Latin Language and Literature (1-3 Credits)

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits if content differs.

LATN604 Cicero (3 Credits)

A study of Cicero's contributions to Roman literature and culture. Readings from the speeches, letters, and/or philosophical and rhetorical works. The development of Cicero's style, his philosophy, and his attitudes toward the changing political scene between 82 and 43 B.C.

LATN605 Vergil (3 Credits)

A study of Vergil's development as a literary artist and Augustan poet through readings in the Eclogues, Georgics, and Aeneid. Readings are in Latin.

LATN623 The Augustan Age (3 Credits)

Analysis of the major literary figures and genres in prose and poetry of the period from 43 BC to AD 14.

LATN624 Silver Age Latin (3 Credits)

An investigation of both the evolving Latin language and the major literary figures and genres in prose and poetry of the period from A.D. 14 through the mid-second century.

LATN630 Latin Literature of the Late Empire (3 Credits)

An examination of Latin literary texts from the third to the fifth centuries A.D., Christian as well as pagan.

LATN631 Medieval Latin (3 Credits)

An examination of literary documentary texts in Latin from the end of the Roman Empire to the Renaissance.

LATN672 Historical Development of the Latin Language (3 Credits)

An analysis of the development of the Latin language from the archaic period to the Middle Ages.

LATN688 Special Topics in Latin Literature (3 Credits)

Repeatable to: 9 credits if content differs.

LATN699 Independent Studies in Latin Literature (1-3 Credits)

Prerequisite: Permission of ARHU-Classics department.

Repeatable to: 6 credits.

LATN799 Master's Thesis Research (1-6 Credits)

LBSC - Library Science

LBSC499 Workshops, Clinics, and Institutes (1-9 Credits)

Workshops, clinics, and institutes developed around specific topics or problems. Primarily for practicing librarians.

Repeatable to: 9 credits.

LBSC602 Serving Information Needs (3 Credits)

An introduction to the skills necessary to interact directly with individuals through the exploration of user behavior theory, strategies to locate and evaluate information from print and electronic resources, and policies and procedures to ensure that all individuals can become information literate.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC602, or both LBSC601 and LBSC650.

LBSC611 History of the Book (3 Credits)

Introduction to the history and development of the book from pre-printing and incunabula to the post-modern book. Book illustration; publishing; collecting.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC611 or LBSC078B.

Formerly: LBSC708B.

LBSC631 Achieving Organizational Excellence (3 Credits)

Overview of the principles, practices, and techniques required for effective leadership and management. The innovative strategies, management responsibilities, and skills needed to achieve and sustain high organizational performance in information-based cultural institutions.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC631 or LBSC635.

LBSC641 Selecting and Evaluating of Resources for Learning (3 Credits)

Policies and procedures for collection development, including identifying, evaluating, acquiring, providing, and promoting resources in all formats, to support learning and teaching in elementary and secondary schools.

Restriction: Permission of INFO-College of Information Studies.

LBSC644 Collection Development (3 Credits)

Activities through which library collections are systematically developed and managed are explored, especially the formulation and implementation of written collection development policies. Other specific topics include identification of user needs; collection evaluation; fund allocation among competing departments, subjects, and/or media; selection methods; intellectual freedom; storage alternatives; and cooperative collection development.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC 644 or LBSC 708G.

Formerly: LBSC 708G.

LBSC645 Literature and Materials for Children (3 Credits)

Survey of literature and other materials for children and youth. Criteria for evaluating and using such materials as they relate to the needs, interests, reading abilities, and other capabilities of young readers.

Restriction: Permission of INFO-College of Information Studies.

LBSC646 Literature and Materials for Young Adults (3 Credits)

Survey of literature and other materials for older children and adolescents. Criteria for evaluating and using such materials as they relate to the needs, interests, reading abilities, and other capabilities of young readers.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC646 or LBSC746.

Formerly: LBSC746.

LBSC647 Children's Services in the Public Library (3 Credits)

Public library services for children, birth to 12 years of age.

Developmental characteristics and information needs of children.

Children as a client group. Programming and collection development.

Management of children's services, including planning, staffing, and advocacy.

Restriction: Permission of INFO-College of Information Studies.

LBSC671 The Lifecycle of Information (3 Credits)

Introduction to methods used to create, acquire, organize, manage and preserve information. Information systems currently used to support digital and physical libraries, databases, and repositories will be explored.

Restriction: Permission of INFO-College of Information Studies.

Credit Only Granted for: LBSC671, or LBSC670 and LBSC690.

LBSC702 User Instruction (3 Credits)

Critical analysis of the rationale, content, and processes of user instruction in library and information settings.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC703 Field Study in Archives and Digital Curation (3 Credits)

Supervised internship experience in archives or digital curation programs in organizations and institutions.

Prerequisite: LBSC602, LBSC631, and LBSC671; and must have completed 9 additional credits. Or permission of instructor.

Restriction: Must be in Library and Information Science (Master's) program; and permission of INFO-College of Information Studies.

LBSC706 Seminar in International and Comparative Librarianship and Information Science (3 Credits)

Comparison and contrast of bibliographic systems, institutions, service arrangements, and professional patterns in developed and developing cultures. Libraries, information organizations, and international information systems viewed against the backdrop of national cultures. Influences of social, political, and economic factors upon these forms.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC707 Field Study in Information Service (3 Credits)

Supervised internship experience in a library, archive, museum, or other information organization.

Prerequisite: LBSC602, LBSC671, and LBSC631; and must have completed an additional 9 credits. Or permission of instructor.

Restriction: Must be in Library and Information Science (Master's) program; and permission of INFO-College of Information Studies.

LBSC708 Special Topics in Library and Information Science (1-3 Credits)

A special topics course with content determined by individual instructors. For questions about the content of the course contact the College of Information Studies.

Restriction: Permission of INFO-College of Information Studies.

Repeatable to: 9 credits if content differs.

Additional Information: No student may earn more than a total of 12 credits (combined) in LBSC 708 and LBSC 709.

LBSC709 Independent Study (1-3 Credits)

Intensive individual study, reading, or research in an area of specialized interest under faculty supervision.

Restriction: Permission of instructor; and permission of INFO-College of Information Studies.

Repeatable to: 9 credits.

LBSC713 Planning and Evaluating Library and Information Services (3 Credits)

An investigation of quantitative and qualitative methods used to plan and evaluate the effectiveness of library and information services. Planning and evaluation methodologies will be analyzed and critiqued. Selected methods will be demonstrated and/or utilized.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC723 Advocacy and Support for Information Services (3 Credits)

Role and influence of government, foundations, associations, and other organizations in supporting and setting the agenda for information services of all types. Role of information professionals in demonstrating advocacy, fund-raising, public relations, lobbying, and seeking external support.

Restriction: Permission of INFO-College of Information Studies.

LBSC724 Public Library Seminar (3 Credits)

Organization, support, and service patterns of public libraries. The public library in national, state, and local contexts.

Prerequisite: Permission of INFO-College of Information Studies.

LBSC731 Special Collections (3 Credits)

Management of special collections, whose holdings may include manuscripts (particularly personal papers), non-textual materials, graphical materials, and rare books, with analysis of the custodial and management functions associated with special collections.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC734 Seminar in the Academic Library (3 Credits)

Role of the academic library within the framework of higher education. Planning programs and services, collections, support, fiscal management, physical plant, and cooperation.

Prerequisite: LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC741 Seminar in School Library Administration (3 Credits)

Development, management, and evaluation of school library programs at all levels.

Prerequisite: INST650; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC742 Collaborative Instructional Design and Evaluation (3 Credits)

School librarians' collaborative role in instruction. Systematic design, development, and evaluation of instructional strategies and products for learning.

Prerequisite: INST650; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC745 Storytelling Materials and Techniques (3 Credits)

Literary sources and instruction and practice in oral techniques.

Prerequisite: LBSC645; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC748 Advanced Seminar in Children's Literature (3 Credits)

Selected topics in literature for children and adolescents, including historical aspects, individual authors, and major themes and trends.

Prerequisite: LBSC645; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC749 Internship in School Libraries (1-6 Credits)

Opportunities to observe and participate in the operation of school libraries at the elementary and secondary levels under the supervision of certified school librarians. Required of all School Library Media certification candidates.

Prerequisite: INST650, LBSC641, INST651, and LBSC741; or permission of instructor.

Restriction: Permission of instructor; and permission of INFO-College of Information Studies.

Repeatable to: 6 credits.

Credit Only Granted for: LBSC744 or LBSC749.

Formerly: LBSC744.

LBSC750 Research and Teaching Fellowship I (1 Credit)

Part of the Research and Teaching Fellowship program, a three-semester teacher training and professional development program in academic libraries. Fellows will complete weekly readings, participate in weekly discussions, observe information literacy instruction sessions, and co-teach at least one research session with another fellow.

Restriction: Permission of INFO-College of Information Studies.

LBSC751 Research and Teaching Fellowship II (1 Credit)

Part of the Research and Teaching Fellowship program, a three-semester teacher training and professional development program in academic libraries. Fellows will complete weekly readings, complete weekly teaching reflections, and begin preparations for the academic job search.

Restriction: Permission of INFO-College of Information Studies.

LBSC752 Research and Teaching Fellowship III (1 Credit)

Part of the Research and Teaching Fellowship program, a three-semester teacher training and professional development program in academic libraries. Fellows will complete weekly readings, participate in weekly discussions, and serve as a Discussion Leader for two class periods of LBSC750, Research and Teaching Fellowship I. Taken in conjunction with the field study course, either LBSC 703 or LBSC 707.

Restriction: Permission of INFO-College of Information Studies.

LBSC753 Information Access in the Social Sciences (3 Credits)

Research methods, information needs, information structure, and information sources and services in the social sciences (for example, anthropology, economics, education, geography, history, political science, psychology, sociology).

Prerequisite: LBSC650 or LBSC602; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC770 Metadata and Tools for Information Professionals (3 Credits)

Principles, standards, and practices of information representation to facilitate accessing needed information in digital bibliographic environments. Includes exposure to Metadata, XML, RDA/AACR2R, DTDs, MARC, Dublin Core, MODS, ISBN and ISSN, FRBR, FRAD, Classification systems, and Controlled Vocabularies such as LCSH, SEARS, NLM, Getty and ERIC Thesauri, and others.

Prerequisite: LBSC671; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC773 Classification Theory (3 Credits)

Survey of classificatory principles from bibliographic, philosophical, biological, psychological, and linguistic perspectives. Challenges to traditional principles from the cognitive sciences and their implementations for bibliographic classification.

Prerequisite: LBSC671; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC774 Seminar in Linguistic Topics (3 Credits)

Topics in linguistics with applications in information science. Syntax and semantics as they apply to the analysis of communication processes and to natural language processing for information storage and retrieval.

Prerequisite: LBSC671; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC775 Indexing, Abstracting and Thesaurus Construction (3 Credits)

Fundamentals of indexing, abstracting, and thesaurus construction in theory and practice, including: the formation of vocabularies; construction of a thesaurus; systems of indexing; effects of systems upon information retrieval; style and format of abstracts; evaluation of abstracting services; and requirements of users of abstracts. The design and construction of index languages/thesauri and analysis and evaluation of existing index languages/thesauri. Discussion of currently available indexing software packages.

Prerequisite: LBSC671; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC786 Library and Archives Preservation (3 Credits)

An introduction to library and archives materials and media, the risks that affect their preservation and strategies used to enhance preservation of library and archives collections. The course reviews preservation knowledge and skills that archival and library staff uses when providing access, managing, processing and working with collections.

Prerequisite: INST604; and permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC789 Special Topics in Contemporary Archives (3 Credits)

Issues in administering contemporary archives and records management programs. Topics are selected by individual instructors. For course content information please contact the College of Information Studies.

Prerequisite: INST604; or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC791 Designing Principled Inquiry (3 Credits)

Critical analysis of roles of information professions and institutions in integrating theory, methods, practice, policies, and values of the field, and applying them to the design of future information systems and services.

Prerequisite: LBSC671, LBSC602, and LBSC631; and additional 9 credits of coursework applied to the MLIS degree. Or permission of instructor.

Restriction: Permission of INFO-College of Information Studies.

LBSC799 Master's Thesis Research (1-6 Credits)

Intensive research conducted under the supervision of a faculty member.

Prerequisite: INST701; and permission of instructor.

Restriction: Must be in Library and Information Science (Master's) program; and permission of instructor; and permission of INFO-College of Information Studies.

Repeatable to: 9 credits.

LGBT - Lesbian Gay Bisexual Transgender Studies

LGBT448 Special Topics in Lesbian, Gay, Bisexual, and Transgender Studies (3 Credits)

In-depth study of particular themes and issues in LGBT studies.

Prerequisite: LGBT200; or permission of LGBT Studies Program.

Restriction: Junior standing or higher.

Repeatable to: 9 credits if content differs.

LGBT448W Sex, Gender, and Jewish Identity (3 Credits)

An exploration of Jewish embodiment, including dynamics related to biological sex, culturally-framed gender, and sexuality. Topics of discussion may include transgender and intersex Jews, stereotypes and gender performance, modesty, genetics, and body alteration. Focus is on contemporary Jewish culture, framed within the larger historical and textual tradition.

Prerequisite: 1 course in WGSS; or 1 course in JWST; or 1 course in LGBT; or permission of instructor.

Cross-listed with: JWST492, WGSS492.

Credit Only Granted for: JWST492, JWST409G, LGBT448W, WMST498W or WGSS492.

Formerly: WMST498W and JWST409G.

LGBT459 Selected Topics in Sexuality and Literature (3 Credits)

Detailed study of sexuality as an aspect of literary and cultural expression.

Prerequisite: Must have completed two lower-level English courses, at least one in literature.

Repeatable to: 9 credits if content differs.

LGBT488 Seminar in Lesbian, Gay, Bisexual, and Transgender Studies (1-3 Credits)

Developments in theories and methods of LGBT Studies, with emphasis upon interaction between the humanities and the social sciences in the elaboration of this interdisciplinary area of scholarship.

Prerequisite: 9 credits in LGBT courses; and permission of LGBT Studies Program.

Recommended: LGBT200. And ENGL265; or CMLT291.

Repeatable to: 9 credits if content differs.

Formerly: CMLT498Y.

LGBT499 Independent Study (1-3 Credits)

Directed research and analysis in LGBT Studies on a topic selected by the student.

Prerequisite: LGBT200; and permission of LGBT Studies Program.

Restriction: Senior standing.

Repeatable to: 6 credits if content differs.

LING - Linguistics

LING410 Grammar and Meaning (3 Credits)

The basic notions of semantic theory: reference, quantification, scope relations, compositionality, thematic relations, tense and time, etc. The role these notions play in grammars of natural languages. Properties of logical form and relationship with syntax.

Prerequisite: Permission of instructor; or LING311.

LING419 Topics in Syntax (3 Credits)

Topics vary.

Prerequisite: LING311.

Repeatable to: 12 credits if content differs.

LING420 Word Formation (3 Credits)

Examination of shape and meaning of possible words, both across languages and within particular languages. Interaction between principles of word formation and other components of a grammar: syntax, logical form and phonology.

Prerequisite: LING321 and LING311.

LING429 Topics in Phonology (3 Credits)

Advanced seminar in phonology. Topics vary.

Prerequisite: LING322.

Repeatable to: 6 credits if content differs.

LING439 Topics in Diachronic Linguistics (3 Credits)

Repeatable to: 6 credits if content differs.

LING440 Grammars and Cognition (3 Credits)

Relationship between the structure, development and functioning of grammars and the structure, development and functioning of other mental systems. Interpretations of experimental and observational work on children's language, aphasia, speech production and comprehension.

Prerequisite: LING321 and LING311.

LING444 Child Language Acquisition (3 Credits)

Examines language acquisition in infancy and early childhood: the nature of children's linguistic representations and how these develop naturally. Role of (possible) innate linguistic structure and interaction of such structure with experience. Evaluation of methods and results of current and classic research leading to contemporary models of language development.

Prerequisite: LING311.

LING448 Advanced Laboratory Research in Linguistics (2-3 Credits)

Individualized, collaborative research course aimed at developing skills for laboratory research in language acquisition, sentence processing or neurolinguistics. Conducting a research project in laboratory linguistics as part of a team creating original research relevant to current issues in linguistics.

Prerequisite: LING248; and (LING200 or LING240).

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

Additional Information: This course is part of a two-semester sequence. Ling248 is a prerequisite. Ling248 and Ling448 must be completed in the same laboratory.

LING449 Topics in Psycholinguistics (3 Credits)

Critical evaluation of primary research in psycholinguistics. Relating theoretical hypotheses to experimental hypotheses and predictions. Evaluation of experimental results. Emphasis on hands-on experience and experimental methodologies. Specific topics vary.

Prerequisite: LING321 and LING311; or permission of ARHU-Linguistics department.

Repeatable to: 6 credits if content differs.

LING451 Grammars and Variation (3 Credits)

Grammars and the use of language in a variety of styles: formal, casual, literary, etc. Consequences for concepts of grammars. Variation theory. Literary styles.

Prerequisite: LING311.

LING460 Diversity and Unity in Human Languages (3 Credits)

Fundamentals of grammatical typology as they relate to issues in social attitudes towards language. Linguistic structure of standard and non-standard languages and dialects. Relationship of different writing systems to linguistic structure. Issues in bilingualism and multilingualism.

Prerequisite: LING240 or LING200.

LING499 Directed Studies in Linguistics (1-3 Credits)

Independent study or research on language under the supervision of a faculty member.

Prerequisite: Permission of ARHU-Linguistics department.

Repeatable to: 6 credits if content differs.

LING610 Syntactic Theory (3 Credits)

Intensive introduction to transformational syntax.

Prerequisite: LING312.

LING611 Issues in Syntax (3 Credits)

Topics of current theoretical interest examined through data from a variety of languages.

Prerequisite: LING610.

LING620 Phonological Theory (3 Credits)

Topics in current phonological theory, as they relate to data from various languages. Segmental and prosodic analysis. Autosegmental theory, metrical theory, etc.

Prerequisite: LING322.

LING621 Issues in Phonology (3 Credits)

Topics of current interest in phonological theory examined through data from several languages.

Prerequisite: LING620.

LING625 Morphology and the Lexicon (3 Credits)

The structure of words and investigation of how word formation processes interact with other components of grammar.

LING640 Psycholinguistics (3 Credits)

Core graduate course in psycholinguistics, covering leading theoretical approaches and experimental methods in language acquisition, language processing, and neurolinguistics.

Restriction: Permission of instructor.

LING641 Issues in Psycholinguistics (3 Credits)

Topics of current interest in psycholinguistics, including both theoretical approaches and experimental and analytical issues in language acquisition, language processing, and neurolinguistics.

Prerequisite: LING640.

LING644 Language Acquisition (3 Credits)

Interpretations of observational and experimental work on children's language development, and relationship between developmental stages and theories of human language faculties.

Prerequisite: LING640.

LING646 Cognitive Neuroscience of Language (3 Credits)

Overview of classical and recent work on the neural basis of speech and language, with a goal of introducing contemporary methods and results to prepare the student to read the neurolinguistics and cognitive neuroscience literature. An emphasis will be placed on current techniques.

LING658 History of a Language (3 Credits)

Detailed examination of the history of a single language or language family.

Repeatable to: 6 credits if content differs.

LING659 Structure of a Language (3 Credits)

Detailed examination of a particular language or language family.

Repeatable to: 6 credits if content differs.

LING660 Introduction to Semantics (3 Credits)

Basic concepts and methods of contemporary semantic theory including basic set theory, elementary propositional and predicate calculus, the structure of predicates and propositions, quantification binding. Prepares students for study of more advanced topics in semantics.

Restriction: Permission of instructor.

LING661 Issues in Semantics (3 Credits)

A second course in semantic theory. Application of basic concepts and methods to topics of current theoretical interest.

Prerequisite: LING660; or permission of ARHU-Linguistics department.

LING663 Pragmatics (3 Credits)

An intensive introduction to formal linguistic pragmatics: the study of systematic dependencies of meaning on context of use. Topics will include implicature, presupposition, reference, topic, focus, and the linguistic means of expressing these.

Prerequisite: LING660 or PHIL660; or permission of instructor.

Recommended: LING661.

LING678 Linguistic Field Methods (3 Credits)

A hands-on introduction to conducting linguistic analysis on an unfamiliar language. Students work with a native speaker of a language that they are not familiar with, devising elicitations and developing analyses. Investigations will include phonological, morphological, syntactic, and semantic properties of the language.

Prerequisite: Minimum grade of B- in LING311 and LING321.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

LING689 Independent Study (1-3 Credits)

Independent studies in grammatical theory.

Restriction: Permission of instructor; and must be in a major within ARHU-Linguistics department.

Repeatable to: 6 credits if content differs.

LING698 Directed Study (1-3 Credits)

Repeatable to: 6 credits if content differs.

LING723 Natural Language Processing (3 Credits)

Introduce fundamental concepts, techniques, and algorithms for the computational handling of natural language. Statistical and machine learning techniques, models, and algorithms that enable computers to deal with the ambiguity and implicit structure of human language. Approaches that focus on uncovering linguistic structure, such as syntactic or semantic parsing, as well as those that focus on manipulating text in useful ways, such as question answering or machine translation.

Prerequisite: Minimum grade of C- in CMSC422; and permission of CMNS-Computer Science department.

Cross-listed with: CMSC723, INST735.

Credit Only Granted for: CMSC723, LING723, or INST735.

Additional Information: CMSC students may only receive PhD Comp. credit for CMSC723 or CMSC823, not both.

LING773 Computational Linguistics II (3 Credits)

Natural language processing with a focus on corpus-based statistical techniques. Topics include: stochastic language modeling, smoothing, noisy channel models, probabilistic grammars and parsing; lexical acquisition, similarity-based methods, word sense disambiguation, statistical methods in NLP applications; system evaluation.

Prerequisite: LING723, CMSC723, or INST735; or permission of instructor. Cross-listed with CMSC773, INST736.

Credit Only Granted for: CMSC773, LING773, or INST736.

Additional Information: CMSC students may only receive PhD Comp. credit for CMSC723 or CMSC823, not both.

LING798 Research Papers in Linguistics (1-6 Credits)

Prerequisite: LING611 and LING621.

Repeatable to: 6 credits if content differs.

LING799 Master's Thesis Research (1-6 Credits)**LING819 Seminar in Syntactic Theory (3 Credits)**

Current topics in research on syntactic theory.

Prerequisite: LING611.

Repeatable to: 6 credits if content differs.

LING829 Seminar in Phonological Theory (3 Credits)

Current topics in research on phonology and morphology.

Prerequisite: LING621.

Repeatable to: 6 credits if content differs.

LING839 Seminar in Language Change (3 Credits)

Topics in research on historical change in language.

Prerequisite: LING630.

Repeatable to: 6 credits if content differs.

LING848 Seminar in Computational Linguistics (3 Credits)

Current topics in research in computational linguistics.

Prerequisite: LING645; or permission of instructor.

LING849 Seminar in Psycholinguistics (3 Credits)

Current topics in research on psycholinguistics.

Prerequisite: LING640 or LING641; or permission of instructor.

Repeatable to: 6 credits if content differs.

LING859 Seminar in Language Acquisition (3 Credits)

Current topics in research on language acquisition.

Prerequisite: LING640 or LING641; or permission of ARHU-Linguistics department.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: LING859 or LING889A.

Formerly: LING889A.

LING869 Seminar in Neurolinguistics (3 Credits)

Current topics in research on neurolinguistics.

Prerequisite: LING640 or LING641; or permission of ARHU-Linguistics department.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: LING869 or LING889A.

Formerly: LING889A.

LING879 Seminar in Semantics (3 Credits)

Current topics in research in semantics.

Prerequisite: LING660 or LING661.

Repeatable to: 9 credits if content differs.

Formerly: LING889.

LING888 Doctoral Research Paper (1-6 Credits)

Students will strengthen their abilities to formulate coherent research questions, conduct research and create a publishable piece of work. In addition, the course is part of a set of requirements to advance to doctoral candidacy.

Repeatable to: 6 credits.

Credit Only Granted for: LING888 or LING895.

Formerly: LING895.

LING889 Directed Research (1-8 Credits)**LING896 Research Paper in Minor Area (3 Credits)**

This course is designed to strengthen the students' ability to do research in a minor area of expertise, and to help them create a publishable piece. In addition, the course constitutes part of a set of requirements to advance to doctoral candidacy.

Prerequisite: LING888.

LING898 Pre-Candidacy Research (1-8 Credits)**LING899 Doctoral Dissertation Research (1-8 Credits)**

MAIT - Masters in the Mathematics of Advanced Industrial Tech

MAIT623 Modern Mathematical Methods of Signal and Image Processing I (3 Credits)

Introduction to current signal/image processing techniques, including wavelets and frames, in the context of applied and numerical harmonic analysis. Topics include time-frequency and time-scale representations, sub-band filterbanks, and applications to compression and denoising.

Prerequisite: Must have knowledge of advanced calculus and applications.

MAIT626 Statistical Pattern Recognition and Classification (3 Credits)

Mathematical and statistical tools for decision making based on categorization of patterns present in data. Topics include regression, feature extraction, dimensionality reduction, parametric and non-parametric approaches to decision, estimation, and classification problems.

MAIT679 Special Topics in Mathematics of Advanced Industrial Technology (3 Credits)

Special topics courses are intended to expose students to the latest developments in mathematical applications. As such, the content will vary depending on the instructor and the current state-of-the-art. 679 will appear with a letter appended to distinguish different topics. New 679 courses will be added as areas of interest arise.

MAIT699 Independent Masters Project (1-3 Credits)

This course allows students to apply advanced mathematical methods to practical, real-world problems. Projects are supervised individually by faculty members from the MAIT Program. The project's nature is flexible and determined jointly by the student and supervisor. A detailed final report must be prepared by the student and approved by the supervisor.

Restriction: Permission of instructor.

Repeatable to: 12 credits if content differs.

MATH - Mathematics

MATH401 Applications of Linear Algebra (3 Credits)

Various applications of linear algebra: theory of finite games, linear programming, matrix methods as applied to finite Markov chains, random walk, incidence matrices, graphs and directed graphs, networks and transportation problems.

Prerequisite: 1 course with a minimum grade of C- from (MATH461, MATH240, MATH341).

MATH402 Algebraic Structures (3 Credits)

For students having only limited experience with rigorous mathematical proofs. Parallels MATH403. Students planning graduate work in mathematics should take MATH403. Groups, rings, integral domains and fields, detailed study of several groups; properties of integers and polynomials. Emphasis is on the origin of the mathematical ideas studied and the logical structure of the subject.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH341, MATH461).

Restriction: Must not be in any of the following programs (Mathematics (Master's); Mathematics (Doctoral)).

Credit Only Granted for: MATH402 or MATH403.

MATH403 Introduction to Abstract Algebra (3 Credits)

Integers; groups, rings, integral domains, fields.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH340); and 1 course with a minimum grade of C- from (MATH341, MATH241); and minimum grade of C- in MATH310. Or

students who have taken courses with comparable content may contact the department.

Credit Only Granted for: MATH402 or MATH403.

MATH404 Field Theory (3 Credits)

Algebraic and transcendental elements, Galois theory, constructions with straight-edge and compass, solutions of equations of low degrees, insolubility of the quintic equation, Sylow theorems, fundamental theorem of finite Abelian groups.

Prerequisite: Minimum grade of C- in MATH403.

MATH405 Linear Algebra (3 Credits)

An abstract treatment of finite dimensional vector spaces. Linear transformations and their invariants.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and minimum grade of C- in MATH310.

MATH406 Introduction to Number Theory (3 Credits)

Integers, divisibility, prime numbers, unique factorization, congruences, quadratic reciprocity, Diophantine equations and arithmetic functions.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH241, MATH246, MATH340, MATH341, MATH461); or permission of CMNS-Mathematics department.

MATH410 Advanced Calculus I (3 Credits)

Subjects covered: sequences and series of numbers, continuity and differentiability of real-valued functions of one variable, the Riemann integral, sequences of functions and power series.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and 1 course with a minimum grade of C- from (MATH340, MATH241); and minimum grade of C- in MATH310.

MATH411 Advanced Calculus II (3 Credits)

Continuation of MATH410. Topics include: The topology of sets in \mathbb{R}^n , the derivative matrix, the general chain rule, inverse and implicit function theorems with applications, smooth curves and surfaces in \mathbb{R}^3 , Lagrange multipliers. Additional topics may include: Metric spaces, the contraction principle, the existence and uniqueness theorem for nonlinear first order differential equations, the Riemann integral of \mathbb{R}^n , introduction to integration on curves and surfaces, Green's theorem.

Prerequisite: Minimum grade of C- in MATH410; and permission of CMNS-Mathematics department.

MATH416 Applied Harmonic Analysis: An Introduction to Signal Processing (3 Credits)

Introduces students to the mathematical concepts arising in signal analysis from the applied harmonic analysis point of view. Topics include applied linear algebra, Fourier series, discrete Fourier transform, Fourier transform, Shannon Sampling Theorem, wavelet bases, multiresolution analysis, and discrete wavelet transform.

Prerequisite: Minimum grade of C- in MATH141; and 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and familiarity with MATLAB is required.

MATH420 Mathematical Modeling (3 Credits)

The course will develop skills in data-driven mathematical modeling through individual and group projects. Emphasis will be placed on both analytical and computational methods, and on effective oral and written presentation of results.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and 1 course with a minimum grade of C- from (MATH241, MATH340); and 1 course with a minimum grade of C- from (MATH246, MATH341); and 1 course with a minimum grade of C- from (STAT400, STAT410); and 1 course with a minimum grade C- from (CMSC106, CMSC131).

Cross-listed with: AMSC420.

Credit Only Granted for: AMSC420 or MATH420.

MATH423 Linear Optimization (3 Credits)

Mathematical formulation of linear programming, graphical solutions, simplex method, duality, transportation problems, assignment problems, and game theory.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH401, MATH461, or MATH341).

Credit Only Granted for: MATH423 or MATH498T.

Formerly: MATH498T.

MATH424 Introduction to the Mathematics of Finance (3 Credits)

Introduction to the mathematical models used in finance and economics with emphasis on pricing derivative instruments. Designed for students in mathematics, computer science, engineering, finance and physics. Financial markets and instruments; elements from basic probability theory; interest rates and present value analysis; normal distribution of stock returns; option pricing; arbitrage pricing theory; the multiperiod binomial model; the Black-Scholes option pricing formula; proof of the Black-Scholes option pricing formula and applications; trading and hedging of options; Delta hedging; utility functions and portfolio theory; elementary stochastic calculus; Ito's Lemma; the Black-Scholes equation and its conversion to the heat equation.

Prerequisite: Minimum grade of C- in MATH141; and 1 course with a minimum grade of C- from (STAT400, STAT410); and permission of CMNS-Mathematics department.

Recommended: MATH246, MATH240, MATH241, MATH340, or MATH341.

Credit Only Granted for: BMGT444, MATH424.

MATH430 Euclidean and Non-Euclidean Geometries (3 Credits)

Hilbert's axioms for Euclidean geometry. Neutral geometry: the consistency of the hyperbolic parallel postulate and the inconsistency of the elliptic parallel postulate with neutral geometry. Models of hyperbolic geometry. Existence and properties of isometries.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH341, MATH461).

MATH431 Geometry for Computer Applications (3 Credits)

Topics from projective geometry and transformation geometry, emphasizing the two-dimensional representation of three-dimensional objects and objects moving about in the plane and space. The emphasis will be on formulas and algorithms of immediate use in computer graphics.

Prerequisite: 1 course with a minimum grade of C- from (MATH461, MATH240, MATH341).

MATH432 Introduction to Topology (3 Credits)

Metric spaces, topological spaces, connectedness, compactness (including Heine-Borel and Bolzano-Weierstrass theorems), Cantor sets, continuous maps and homeomorphisms, fundamental group (homotopy, covering spaces, the fundamental theorem of algebra, Brouwer fixed point theorem), surfaces (e.g., Euler characteristic, the index of a vector field, hairy sphere theorem), elements of combinatorial topology (graphs and trees, planarity, coloring problems).

Prerequisite: Minimum grade of C- in MATH410.

MATH436 Differential Geometry of Curves and Surfaces I (3 Credits)

Curves in the plane and Euclidean space, moving frames, surfaces in Euclidean space, orientability of surfaces; Gaussian and mean curvatures; surfaces of revolution, ruled surfaces, minimal surfaces, special curves on surfaces, "Theorema Egregium"; the intrinsic geometry of surfaces.

Prerequisite: 1 course with a minimum grade of C- from (MATH241, MATH340); and 1 course with a minimum grade of C- from (MATH461, MATH240, MATH341); and must have completed two 400-level MATH courses with a minimum grade of C- (not including MATH461, and 480's).

MATH437 Differential Forms (3 Credits)

Introduction to differential forms and their applications, and unites the fundamental theorems of multivariable calculus in a general Stokes Theorem that is valid in great generality. It develops this theory and technique to perform calculations in analysis and geometry. Topics include an introduction to topological spaces, the Gauss-Bonnet Theorem, Gauss's formula for the linking number, and the Cauchy Integral Theorem. Applications include Maxwell's equations of electromagnetism, connections and gauge theory, and symplectic geometry and Hamiltonian dynamics.

Prerequisite: 1 course with a minimum grade of C- from (MATH241, MATH340); and 1 course with a minimum grade of C- from (MATH240, MATH341, MATH461).

Recommended: MATH405, MATH403, MATH436, MATH410, or MATH432.

MATH445 Elementary Mathematical Logic (3 Credits)

Elementary development of propositional and predicate logic, including semantics and deductive systems and with a discussion of completeness, incompleteness and the decision problem.

Prerequisite: Minimum grade of C- in MATH141.

MATH446 Axiomatic Set Theory (3 Credits)

Development of a system of axiomatic set theory, choice principles, induction principles, ordinal arithmetic including discussion of cancellation laws, divisibility, canonical expansions, cardinal arithmetic including connections with the axiom of choice, Hartog's theorem, König's theorem, properties of regular, singular and inaccessible cardinals.

Prerequisite: 1 course with a minimum grade of C- from (MATH403, MATH410).

MATH452 Introduction to Dynamics and Chaos (3 Credits)

An introduction to mathematical dynamics and chaos. Orbits, bifurcations, Cantor sets and horseshoes, symbolic dynamics, fractal dimension, notions of stability, flows and chaos. Includes motivation and historical perspectives, as well as examples of fundamental maps studied in dynamics and applications of dynamics.

Prerequisite: MATH341; or MATH246 and one of (MATH240 or MATH461).

Cross-listed with: AMSC452.

Credit Only Granted for: AMSC452 or MATH452.

MATH456 Cryptography (3 Credits)

The theory, application, and implementation of mathematical techniques used to secure modern communications. Topics include symmetric and public-key encryption, message integrity, hash functions, block-cipher design and analysis, number theory, and digital signatures.

Prerequisite: (CMSC106, CMSC131, or ENEE150; or equivalent programming experience); and (2 courses from (CMSC330, CMSC351, ENEE324, or ENEE380); or any one of these courses and a 400-level MATH course, or two 400-level MATH courses); and Permission of CMNS-Mathematics department or permission of instructor.

Cross-listed with: CMSC456, ENEE456.

Credit Only Granted for: MATH456, CMSC456 or ENEE456.

MATH461 Linear Algebra for Scientists and Engineers (3 Credits)

Basic concepts of linear algebra. This course is similar to MATH240, but with more extensive coverage of the topics needed in applied linear algebra: change of basis, complex eigenvalues, diagonalization, the Jordan canonical form.

Prerequisite: Minimum grade of C- in MATH141; and must have completed a MATH or STAT course with a prerequisite of MATH141.

Credit Only Granted for: MATH240, MATH341, or MATH461.

Additional Information: This course may not be used towards the upper level math requirements for MATH/STAT majors.

MATH462 Partial Differential Equations (3 Credits)

Linear spaces and operators, orthogonality, Sturm-Liouville problems and eigenfunction expansions for ordinary differential equations. Introduction to partial differential equations, including the heat equation, wave equation and Laplace's equation. Boundary value problems, initial value problems and initial-boundary value problems.

Prerequisite: 1 course with a minimum grade of C- from (MATH241, MATH340); and 1 course with a minimum grade of C- from (MATH246, MATH341).

MATH463 Complex Variables (3 Credits)

The algebra of complex numbers, analytic functions, mapping properties of the elementary functions. Cauchy integral formula. Theory of residues and application to evaluation of integrals. Conformal mapping.

Prerequisite: 1 course with a minimum grade of C- from (MATH241, MATH340).

MATH464 Transform Methods (3 Credits)

Fourier transform, Fourier series, discrete fast Fourier transform (DFT and FFT). Laplace transform. Poisson summations, and sampling. Optional Topics: Distributions and operational calculus, PDEs, Wavelet transform, Radon transform and applications such as Imaging, Speech Processing, PDEs of Mathematical Physics, Communications, Inverse Problems.

Prerequisite: 1 course with a minimum grade of C- from (MATH246, MATH341).

MATH470 Mathematics for Secondary Education (3 Credits)

An advanced perspective on some of the core mathematics underlying high school mathematics courses. Topics include number systems, functions of one variable, equations, inequalities, trigonometric functions, curve fitting, and polynomials. The course includes an analysis of alternate approaches to mathematical ideas and problems, and makes connections between ideas that may have been studied separately in different high school and college courses.

Prerequisite: MATH141 and MATH140; and must have completed one 400-level MATH course (not to include MATH461, 478, and 480's).

Restriction: Must be in the Secondary Math Education major.

MATH475 Combinatorics and Graph Theory (3 Credits)

General enumeration methods, difference equations, generating functions. Elements of graph theory, matrix representations of graphs, applications of graph theory to transport networks, matching theory and graphical algorithms.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH341, MATH461); and 1 course with a minimum grade of C- from (MATH241, MATH340); and permission of CMNS-Mathematics department. Cross-listed with CMSC475.

Credit Only Granted for: MATH475 or CMSC475.

MATH478 Selected Topics For Teachers of Mathematics (1-3 Credits)

Prerequisite: Permission of CMNS-Mathematics department.

Additional Information: Math majors may not use this course to fulfill the upper-level math requirement.

MATH480 Algebra for Middle School Teachers (3 Credits)

Prepares teachers with elementary certification to teach Algebra 1 in middle school. Focuses on basic algebra concepts and related theoretical ideas.

Prerequisite: MATH214.

Restriction: Must be a middle school teacher; and permission of CMNS-Mathematics department.

Credit Only Granted for: MATH480 or MATH483.

Additional Information: Not applicable to MATH/STAT major or minor requirements.

MATH481 Statistics and Data Analysis for Middle School Teachers (3 Credits)

Prepares teachers with elementary certification to teach simple data analysis and probability in middle school. Focuses on understanding basic statistics, data analysis, and related theoretical ideas.

Prerequisite: MATH214.

Restriction: Must be a middle school teacher; and permission of CMNS-Mathematics department.

Credit Only Granted for: MATH481 or MATH485.

Additional Information: Not applicable to MATH/STAT major or minor requirements.

MATH484 Geometry for High School Teachers (3 Credits)

Focuses on concepts related to geometry, including several geometry axiom schemes, transformations, and similarity. Includes constructions with Geometer's Sketchpad.

Prerequisite: MATH141; or students who have taken courses with comparable content may contact the department.

Restriction: Senior standing.

Credit Only Granted for: MATH482, MATH484, or MATH498E.

Formerly: MATH498E.

MATH487 Number for Middle Grades Teachers (3 Credits)

The rational number and proportional reasoning concepts developed in the middle grades and the larger mathematical context for these. Multiple representations of relationships, including verbal descriptions, diagrams, tables, graphs, and equations. Common misconceptions.

Prerequisite: Must have admission to M.A. or M.Ed. with concentration in Mathematics Education; or permission of CMNS-Mathematics department.

Restriction: This course may not be used towards the upper level math requirements for the MATH/STAT major.

Credit Only Granted for: MATH487 or MATH498K.

Formerly: MATH498K.

MATH489 Research Interactions in Mathematics (1-3 Credits)

Students participate in a vertically integrated (undergraduate, graduate and/or postdoctoral, faculty) mathematics research group. Format varies. Students and supervising faculty will agree to a contract which must be approved by the department. Up to three credits of MATH489 may be applied to the mathematics degree requirements. See the department's MATH489 online syllabus for further information.

Prerequisite: Permission of CMNS-Mathematics department.

Repeatable to: 10 credits if content differs.

MATH498 Selected Topics in Mathematics (1-9 Credits)

Topics of special interest to advanced undergraduate students will be offered occasionally under the general guidance of the departmental committee on undergraduate studies.

Repeatable to: 9 credits if content differs.

MATH600 Abstract Algebra I (3 Credits)

Groups with operators, homomorphism and isomorphism theorems, normal series, Sylow theorems, free groups, Abelian groups, rings, integral domains, fields, modules. Topics may include HOM (A,B), Tensor products, exterior algebra.

Prerequisite: MATH405 and MATH403; or students who have taken courses with comparable content may contact the department.

MATH601 Abstract Algebra II (3 Credits)

Field theory, Galois theory, multilinear algebra. Further topics from: Dedekind domains, Noetherian domains, rings with minimum condition, homological algebra.

Prerequisite: MATH600.

MATH602 Homological Algebra (3 Credits)

Projective and injective modules, homological dimensions, derived functors, spectral sequence of a composite functor. Applications.

Prerequisite: MATH600.

MATH603 Commutative Algebra (3 Credits)

Ideal theory of Noetherian rings, valuations, localizations, complete local rings, Dedekind domains.

Prerequisite: MATH600.

MATH606 Algebraic Geometry I (3 Credits)

Prime and primary ideals in Noetherian rings, Hilbert Nullstellensatz, places and valuations, prevarieties (in the sense of Serre), dimension, morphisms, singularities, varieties, schemes, rationality.

Prerequisite: MATH600 and MATH601.

MATH607 Algebraic Geometry II (3 Credits)

Topics in contemporary algebraic geometry chosen from among: theory of algebraic curves and surfaces, elliptic curves, Abelian varieties, theory of schemes, theory of zeta functions, formal cohomology, algebraic groups, reduction theory.

Prerequisite: MATH606.

MATH620 Algebraic Number Theory I (3 Credits)

Algebraic numbers and algebraic integers, algebraic number fields of finite degree, ideals and units, fundamental theorem of algebraic number theory, theory of residue classes, Minkowski's theorem on linear forms, class numbers, Dirichlet's theorem on units, relative algebraic number fields, decomposition group, inertia group and ramification group of prime ideals with respect to a relatively Galois extension.

Prerequisite: MATH601.

MATH621 Algebraic Number Theory II (3 Credits)

Valuation of a field, algebraic function fields, completion of a valuation field, ramification exponent and residue class degree, ramification theory, elements, differentials, discriminants, product formula and characterization of fields by the formula, Gauss sum, class number formula of cyclotomic fields.

Prerequisite: MATH600. And MATH620; or students who have taken courses with comparable content may contact the department.

MATH630 Real Analysis I (3 Credits)

Lebesgue measure and the Lebesgue integral on \mathbb{R} , differentiation of functions of bounded variation, absolute continuity and fundamental theorem of calculus, L_p spaces on \mathbb{R} , Riesz-Fischer theorem, bounded linear functionals on L_p , measure and outer measure, Fubini's theorem.

Prerequisite: MATH411; or students who have taken courses with comparable content may contact the department.

MATH631 Real Analysis II (3 Credits)

Abstract measure and integration theory, metric spaces, Baire category theorem and uniform boundedness principle, Radon-Nikodym theorem, Riesz Representation theorem, Lebesgue decomposition, Banach and Hilbert Spaces, Banach-Steinhaus theorem, topological spaces, Arzela-Ascoli and Stone-Weierstrass theorems, compact sets and Tychonoff's theorem.

Prerequisite: MATH630.

MATH632 Functional Analysis (3 Credits)

Introduction to functional analysis and operator theory: normed linear spaces, basic principles of functional analysis, bounded linear operators on Hilbert spaces, spectral theory of selfadjoint operators, applications to differential and integral equations, additional topics as time permits.

Prerequisite: MATH631.

MATH634 Harmonic Analysis (3 Credits)

L_1 theory: Fejer theorem, inversion theorem, ideal structure, Tauberian theorem. L_2 theory: Plancherel-Parseval theorems, Paley-Wiener theorem. L_p theory: Hausdorff-Young theorem. Distribution theory: Bochner's theorem, Wiener continuous measures theorem, Malliavin theorem, Schwartz theory, almost periodic functions.

Prerequisite: MATH630.

MATH636 Representation Theory (3 Credits)

Introduction to representation theory of Lie groups and Lie algebras; initiation into non-abelian harmonic analysis through a detailed study of the most basic examples, such as unitary and orthogonal groups, the Heisenberg group, Euclidean motion groups, the special linear group. Additional topics from the theory of nilpotent Lie groups, semisimple Lie groups, p-adic groups or C-algebras.

Prerequisite: MATH631.

MATH642 Dynamical Systems I (3 Credits)

Foundations of topological dynamics, homeomorphisms, flows, periodic and recurrent points, transitivity and minimality, symbolic dynamics. Elements of ergodic theory, invariant measures and sets, ergodicity, ergodic theorems, mixing, spectral theory, flows and sections. Applications of dynamical systems to number theory, the Weyl theorem, the distribution of values of polynomials, Vander Waerden's theorem on arithmetic progressions.

Prerequisite: MATH432. And MATH630; or students who have taken courses with comparable content may contact the department.

MATH643 Dynamical Systems II (3 Credits)

Entropy theory, variational principle for the entropy, expansiveness, measures with maximal entropy. Smooth systems on manifolds, diffeomorphisms and flows, periodic points, stable and unstable manifolds, homoclinic points, transversality, the Krupka-Smale theorem, Morse-Smale systems. Hyperbolicity, Anosov systems, distributions and foliations, strange attractors, Bowen's measure.

Prerequisite: MATH642; or students who have taken courses with comparable content may contact the department.

MATH660 Complex Analysis I (3 Credits)

Linear transformations, analytic functions, conformal mappings, Cauchy's theorem and applications, power series, partial fractions and factorization, elementary Riemann surfaces, Riemann's mapping theorem.

Prerequisite: MATH410 and MATH463; or students who have taken courses with comparable content may contact the department.

MATH661 Complex Analysis II (3 Credits)

Introduction to techniques of several complex variables, with focus on geometric topics: Hartogs phenomena, Cousin problems, Dolbeault cohomology, L2 techniques, embedding of Stein manifolds, and the theory of coherent analytic sheaves.

Prerequisite: MATH630 and MATH660.

MATH669 Selected Topics in Riemann Surfaces (1-3 Credits)

Construction of Riemann surfaces, hyperbolic geometry, Fuchsian and Kleinian groups, potential theory, uniformisation spaces of meromorphic functions, line bundles, Picard variety, Riemann-Roch, Teichmueller theory.

Restriction: Permission of instructor.

Repeatable to: 99 credits if content differs.

MATH670 Ordinary Differential Equations I (3 Credits)

Existence and uniqueness, linear systems usually with Floquet theory for periodic systems, linearization and stability, planar systems usually with Poincare-Bendixson theorem.

Prerequisite: MATH405.

Cross-listed with: AMSC670.

Credit Only Granted for: AMSC670 or MATH670.

MATH671 Ordinary Differential Equations II (3 Credits)

The content of this course varies with the interests of the instructor and the class. Stability theory, control, time delay systems, Hamiltonian systems, bifurcation theory, and boundary value problems.

Prerequisite: MATH630.

Cross-listed with: AMSC671.

Credit Only Granted for: AMSC671 or MATH671.

MATH673 Partial Differential Equations I (3 Credits)

Analysis of boundary value problems for Laplace's equation, initial value problems for the heat and wave equations. Fundamental solutions, maximum principles, energy methods. First order nonlinear PDE, conservation laws. Characteristics, shock formation, weak solutions. Distributions, Fourier transform.

Prerequisite: MATH411; or students who have taken courses with comparable content may contact the department.

Cross-listed with: AMSC673.

Credit Only Granted for: AMSC673 or MATH673.

MATH674 Partial Differential Equations II (3 Credits)

Boundary value problems for elliptic partial differential equations via operator-theoretic methods. Hilbert spaces of functions. Duality, weak convergence. Sobolev spaces. Spectral theory of compact operators. Eigenfunction expansions.

Prerequisite: MATH673 or AMSC673; or permission of instructor.

Cross-listed with: AMSC674.

Credit Only Granted for: AMSC674 or MATH674.

MATH675 Analysis and PDEs (3 Credits)

Introduction to tools of modern analysis which have been used in recent years in the study of partial differential equations: Fourier transform, Calderon-Zygmund theory, interpolation, Lebesgue spaces, Lorentz spaces, Sobolev spaces, Besov spaces, Littlewood-Paley theory, multipliers, Bernstein inequalities, the fractional Leibniz rule, Strichartz estimates, velocity averaging lemma. Applications to some of the following PDEs: the Navier-Stokes equations, Euler equations, nonlinear Schrodinger equations, nonlinear wave equations, the Patlak Keller Segel model.

Prerequisite: MATH630 or MATH674; or permission of instructor.

MATH689 Research Interactions in Mathematics (1-3 Credits)

The students participate in a vertically integrated (undergraduate, graduate and/or postdoctoral, faculty) research group. Format varies, but includes regular meetings, readings and presentations of material. See graduate program's online syllabus or contact the graduate program director for more information.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

MATH695 Teaching Seminar (1 Credit)

A course intended for first year teaching assistants. Topics include: everyday mechanics of teaching; teaching methods and styles; technology; course enrichment, diversity in the classroom; sexual harassment; teacher-student interactions; presentations by students.

Restriction: Must be in one of the following programs (Mathematics (Doctoral); Mathematics (Master's); Mathematical Statistics (Doctoral); Applied Mathematics and Scientific Computation (Master's); Mathematical Statistics (Master's); Applied Mathematics and Scientific Computation (Doctoral)).

MATH712 Mathematical Logic I (3 Credits)

Sentential logic, first-order languages, models and formal deductions. Basic model theory including completeness and compactness theorems, other methods of constructing models, and applications such as non-standard analysis.

MATH713 Mathematical Logic II (3 Credits)

Incompleteness and undecidability results of Godel, Church, Tarski and others. Recursive function. Basic proof theory and axiomatic set theory.

Prerequisite: MATH712.

MATH730 Fundamental Concepts of Topology (3 Credits)

Survey of basic point set topology, fundamental group, covering spaces, Van Kampen's theorem, simplicial complexes, simplicial homology, Euler characteristics and classification of surfaces.

Prerequisite: MATH403, MATH410, and MATH411; or students who have taken courses with comparable content may contact the department.

MATH734 Algebraic Topology (3 Credits)

Singular homology and cohomology, cup products, Poincare duality, Eilenberg-Steenrod axioms, Whitehead and Hurewicz theorems, universal coefficient theorem, cellular homology.

Prerequisite: MATH600; and MATH432 or MATH730; or students who have taken courses with comparable content may contact the department.

MATH740 Fundamental Concepts of Differential Geometry (3 Credits)

Manifolds, tangent vectors and differential forms, Riemannian metrics, connections, curvature, structure equations, geodesics, calculus of variations.

Prerequisite: MATH405, MATH411, and MATH730; or students who have taken courses with comparable content may contact the department.

MATH742 Geometric Analysis (3 Credits)

Calculus of Variations, Bochner technique, Morse theory, weak solutions and elliptic regularity, maximum principle for elliptic and parabolic equations, Green's function of the Laplacian, isoperimetric and Sobolev inequalities, continuity method, curvature and comparison results, harmonic maps, curvature prescription problems.

Prerequisite: MATH673 and MATH674; or MATH740.

MATH744 Lie Groups I (3 Credits)

An introduction to the fundamentals of Lie groups, including some material on groups of matrices and Lie algebras.

Prerequisite: MATH405, MATH403, MATH411, and MATH432; or students who have taken courses with comparable content may contact the department.

MATH799 Master's Thesis Research (1-6 Credits)**MATH808 Selected Topics in Algebra (1-3 Credits)**

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

MATH818 Selected Topics in Logic (1-3 Credits)

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

MATH838 Select Topics in Dynamics (1-3 Credits)

Advanced topics of current interest.

Repeatable to: 18 credits.

MATH848 Selected Topics in Geometry and Topology (1-3 Credits)

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

MATH858 Selected Topics in Analysis (1-3 Credits)

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

MATH868 Selected Topics in Complex Analysis (1-3 Credits)

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

MATH898 Pre-Candidacy Research (1-8 Credits)**MATH899 Doctoral Dissertation Research (1-8 Credits)**

MEES - Marine-Estuarine-Environmental Sciences

MEES432 Physiological Ecology of Animals (3 Credits)

An examination of the influence of environmental constraints on animal function and energetic efficiency in the context of abiotic conditions in the habitats occupied by individuals.

Prerequisite: BSCI361; or students who have taken courses with comparable content may contact the department; or permission of instructor.

Credit Only Granted for: MEES498E, MEES698E, MEES432, or MEES632.

Formerly: MEES498E.

MEES498 Topics in Marine-Estuarine-Environmental Sciences (1-4 Credits)

Lecture and/or laboratory series organized to study a selected area of marine-estuarine-environmental sciences not otherwise considered in formal courses.

MEES601 Applied Environmental Science (2 Credits)

Designed to promote an appreciation of interdisciplinarity in natural and social sciences and to provide exposure to how science can influence and inform ongoing policy and management debates. The course addresses the role of science and scientists in providing information to policy makers and managers on complex environmental challenges.

Credit Only Granted for: MEES601 or MEES609A.

Formerly: MEES609A.

MEES602 R Programming Basics (1 Credit)

R Programming- Part 1 Module (Basics)

Credit Only Granted for: MEES708X or MEES602.

Formerly: MEES708X.

MEES603 Responsible Conduct of Research (1 Credit)

Explores the "rules of the road" for being a scientist. Using a case study approach, the seminar will cover concepts of how science is regulated, what constitutes misconduct, how research is planned, conducted, and reported authorship and data ownership, and the ethical treatment of human and animal subjects. The course will focus mainly on mentor-trainee interactions and diversity in the sciences.

Credit Only Granted for: MEES608B or MEES603.

Formerly: MEES608B.

MEES604 Biometry (3 Credits)

Application of inferential statistics to environmental data, design a sound experiments and studies, and a working knowledge of R.

Credit Only Granted for: BIOM601, MEES604, MEES698B.

Formerly: MEES698B.

MEES605 Energy and Environment (3 Credits)

Role of energy in environmental and human-dominated systems and their linkage. Discussion of the historical and modern production and consumption of energy. Energy systems simulation modeling, energy analysis and energy auditing. Review of national energy policies and proposed alternatives.

Prerequisite: MATH120; or must have completed MATH220; or students who have taken courses with comparable content may contact the department. Cross-listed with ENST605.

Credit Only Granted for: ENST405, ENST605, MEES605, or MEES698Z.

Formerly: MEES698Z.

MEES606 Cell and Molecular Biology for Environmental Scientists (4 Credits)

An invisible world courses through every living thing. This is the world of molecules, tiny machines millions of time smaller than the machines we are most familiar with, like automobiles. Individually, each of the molecules is a delicate instrument, measuring, making, weighing, and building the thing we call life. The molecules of living things are unique among the molecules of the Earth. These tiny molecular messengers, engines, and machines are built to perform highly specific tasks unlike the molecules formed by physical processes.

Prerequisite: An undergraduate course in cell biology or biochemistry.

Credit Only Granted for: MEES698C or MEES606.

Formerly: MEES698C.

MEES607 Quantitative Methods in Environmental Sciences (3 Credits)

Mathematical approaches and solutions (both analytical and numerical) that cut across environmental disciplines, and will introduce analytical techniques.

Prerequisite: MATH120 and MATH121; or must have completed MATH220 and MATH221; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: MEES607 or MEES698G.

Formerly: MEES698G.

MEES608 Seminar in Marine-Estuarine-Environmental Sciences (1-2 Credits)**MEES609 Professional Development in Marine Estuarine Environmental Science (1-3 Credits)**

Training designed for existing and future careers.

Repeatable to: 20 credits if content differs.

MEES610 Land Margin Interactions (4 Credits)

Broad overview of the components and biogeochemistry of the coastal zone (atmosphere, land, streams, wetlands, estuaries) and the time and space scales on which interactions occur between components. Includes 4 h of classes per week with readings from the literature, field trips, a term paper, and a forum. Course is taught on the Interactive Video Network.

Credit Only Granted for: MEES610 or MEES698I.

Formerly: MEES698I.

MEES611 Estuarine Systems Ecology (3 Credits)

A broad systems perspective on the important components and processes of estuarine ecosystems, with quantitative and/or mathematical treatment toward development of representative models for estuarine dynamics.

MEES612 Applied Bayesian Statistics (1 Credit)

This seminar will explore the advanced practices of Bayesian network and graphical model to high dimensional inter-disciplinary environmental data. Through hands-on experience and real studies from Bayesian perspectives, students will learn the basics of evaluating Bayesian network and graphical analyses, and interpreting and communicating the results. Case studies involving ecological and environmental science will be used to illustrate Bayesian analyses. The statistical programming language R and software packages such as OpenBUGS, JAGS, and STAN will be used in illustrating Bayesian models.

Recommended: MEES 698B or equivalent course, students are encouraged to discuss with the instructor.

Credit Only Granted for: MEES 608R or MEES612.

Formerly: MEES608R.

MEES613 Environmental Statistics I (3 Credits)

Extends the quantitative training for students in the environmental sciences. It will explore the basic practices of statistics to inter-disciplinary environmental data. The goal is to train students with the statistical knowledge and tools needed to conduct statistical analysis in their own research. The statistical programming language R is used in class, to complete homework sets, and to analyze online data.

Credit Only Granted for: MEES698B or MEES613.

Formerly: MEES698B.

MEES614 Spatial Ecology in R (3 Credits)

Many ecological questions in terrestrial and marine systems originate from the observation that organisms and the ecological processes that influence them vary in space. This course emphasizes the study of spatial ecological patterns (including animal movement), the processes that generate and maintain these patterns and processes, and the construction of models in R to analyze, simulate, and understand the interplay between spatial pattern, ecological processes, and scale. The objective of the course is to introduce students to ecological theories and concepts relevant to the study of spatial ecological patterns in terrestrial and marine systems, while providing the R skills necessary to articulate and answer scientific questions by confronting models with data.

Prerequisite: General Ecology and basic proficiency in R programming.

Recommended: Courses in GIS and statistics.

Restriction: Permission of instructor.

MEES615 Scientific Writing and Communication (2 Credits)

This professional development course will provide graduate students with a solid foundation in the fundamental concepts of scientific writing and communication to both scientists and citizens. Main topics will include the peer-review process and paper structure, how to develop strong editing and review skills, and how to craft effective research and outreach talks. Additional topics will include scientific ethics and application of communication skills to proposals, networking, job applications, and interviews. Students must agree to write new text for each writing assignment.

Restriction: Must have completed first year of graduate study; or permission of the instructor; and must have permission of the Marine Estuarine Environmental Sciences (MEES) Program.

Credit Only Granted for: MEES608D or MEES615.

Formerly: MEES608D.

Additional Information: Offered synchronously to all MEES partner institutions via video. Please contact the instructor(s) for access and logistical information as needed.

MEES617 Hydrological Effects of Land Use Change (3 Credits)

Detailed examination of the catchment-scale hydrological effects attributable to major land use and land cover alterations, including both anthropic and non-anthropoc disturbances.

Prerequisite: Statistics course and hydrology course or permission of instructor.

MEES618 Seminars in Marine Estuarine Environmental Sciences (1-2 Credits)

Topics of interest in Marine Estuarine Environmental Sciences.

Repeatable to: 20 credits if content differs.

MEES620 Environment and Society (3 Credits)

Students will obtain foundational knowledge of core theories and methods that integrate cultural and socio-economic research into environmental science. Key topics include: coupled natural and human systems, cultural models of the environment, social networks, ecological economics, political ecology, environmental justice, and science communication.

Cross-listed with: ANTH620.

Credit Only Granted for: ANTH620 or MEES620.

Additional Information: Offered over the interactive video network.

MEES621 Biological Oceanography (4 Credits)

Population and community ecology of estuarine and marine systems; coastal and estuarine processes are emphasized in the context of oceans in general. Field and lab trips required.

MEES622 Sustainability Science: quantitative and systems approach (3 Credits)

Modern sustainability science goes beyond single-resource management and integrates biophysical and socio-economic considerations of sustainability. This course is designed to help provide students with a historical background, critical thinking approaches, and analytical tools to address sustainability from a scientific perspective.

MEES623 Comparative Animal Physiology (2 Credits)

Introduces students to the many biochemical and physiological mechanisms that allow different species to inhabit a variety of ecosystems.

Recommended: Undergraduate Biochemistry or Physiology.

Jointly offered with: MEES423.

MEES626 Environmental Geochemistry I (3 Credits)

Brief overview of biogeochemical cycles; fundamental aquatic chemistry that can be applied to a variety of environmental systems.

Recommended: Completion of one semester of physical chemistry is recommended.

Restriction: Permission of instructor.

Credit Only Granted for: MEES626 or MEES698L.

Formerly: MEES698L.

MEES627 Biogeochemistry (3 Credits)

A detailed examination of Earth's biogeochemical cycles, with an emphasis on major elements and carbon cycling through globally important biomes. Topics include biogeochemical cycles of organic carbon and nutrients in terrestrial, lacustrine, wetland, and marine systems.

Credit Only Granted for: MEES627 or MEES698K (Spring 2023).

Formerly: MEES698K.

MEES631 Fish Ecology (3 Credits)

Study of the interrelationships between individuals, their communities and environment. Explores the environmental biology of fish, feeding ecology, energetics and growth, population biology, reproduction and life history, and population and community interactions.

Restriction: Permission of instructor.

MEES632 Physiological Ecology of Animals (3 Credits)

An examination of the influence of environmental constraints on animal function and energetic efficiency in the context of abiotic conditions in the habitats occupied by individuals.

Credit Only Granted for: MEES698E, MEES498E, MEES432, MEES632.

Formerly: MEES698E.

MEES637 Zooplankton Ecology (3 Credits)

A quantitative investigation of zooplankton ecology, emphasizing population dynamics and modeling, feeding, behavior, food-webs, and bio-physical interactions.

Prerequisite: MEES621; or permission of instructor.

Credit Only Granted for: MEES698G, MEES637.

Formerly: MEES698G.

MEES640 Interconnected Earth Systems: Land, Ocean, and Estuary (3 Credits)

Explores the interconnected physical and biogeochemical systems of land, estuary, and ocean with cross cutting themes of human impacts and global change. Broad concepts will be combined with targeted interactive case studies to demonstrate how these systems are linked by humans, climate, and water.

MEES650 Advanced Wetland Ecology (3 Credits)

Plant and animal communities, biogeochemistry, and ecosystem properties of wetlands. Lectures are supplemented by field trips (normally 2 days total during the semester) and in-class labs. Hands-on activities and exercises include identification of wetland plant species, wetland mapping and delineation, and collection and analysis of field data on wetland vegetation, soil, and hydrology. Wading boots (at least hip length) are strongly recommended.

Prerequisite: BIOM301; and ENST360 or other ecology equivalent; or permission of AGNR-Environmental Science and Technology department; or permission of CMNS-Marine & Estuarine-Environmental Science Program).

Cross-listed with: ENST650.

Jointly offered with: ENST450, MEES650.

Credit Only Granted for: ENST450, ENST650, or MEES650.

Additional Information: Wading boots (at least hip length) are strongly recommended.

MEES660 Ecological Systems (3 Credits)

An introduction to the field of ecology is provided for matriculating graduate students and prepares them for more advanced concepts. Students will be exposed to ecology both in theory and practice through lectures, readings, and quantitative exercises, round table debates and discussions with current practitioners.

MEES661 Physics of Estuarine and Marine Environments (3 Credits)

General introduction to the physical oceanography of estuarine and marine systems. Physical characteristics of seawater, heat and mass transport, major ocean currents, basic dynamical oceanography, surface waves, tides, turbulence, sediment transport, estuarine circulation.

Prerequisite: Must have completed one year of physics coursework; and must have completed one year of calculus coursework. Or permission of instructor.

MEES670 Conservation Biology (3 Credits)

Conservation in the Anthropocene means conserving biodiversity and ecosystem function in the midst of climate change, habitat loss, overexploitation, altered nutrient cycling, and invasive species with protected areas and reserve networks, ecosystem restoration, and other biodiversity conservation and management schemes. Cross-listed with CONS670.

Credit Only Granted for: CONS670 or MEES670.

MEES671 Remote Sensing for Environmental Management (4 Credits)

Coverage of tools necessary to carry out remote sensing studies of ecosystem pattern and process, land-use and land-cover change and the impact of climate changes. General overview of recent research at the interface of remote sensing, ecosystem analysis, global change, and environmental management.

Credit Only Granted for: MEES671, MEES698X.

Formerly: MEES698X.

MEES680 Cell and Molecular Biology for the Environmental Scientist- From Genes to Ecosystems (3 Credits)

Introduces environmental scientists to the methods and approaches that are the foundations for today's breakthroughs in molecular and cellular biology. Detailed examination of papers published in the last few years along with online background materials will be used to reinforce the connection of key concepts to experimentation.

MEES681 Advanced Ecological Design (3 Credits)

An advanced survey course on the field of ecological design. Principles of design are illustrated with case studies from biologically-based waste treatment systems, ecosystem management and sustainable development.

Prerequisite: Must have completed one semester of calculus; and (CHEM131 and PHYS121). Or permission of instructor. Cross-listed with ENST681.

Credit Only Granted for: ENST481, ENST681, or MEES681.

MEES682 Fishery Science and Management (3 Credits)

Aquatic production and fisheries yields. Introduction to fish population dynamics and assessment methods. Effects of fishing on resource potential yields. Causes of fluctuations in resource abundance. An emphasis on the relationship between science and management.

Restriction: Permission of instructor.

MEES684 Marine Microbial Ecology (3 Credits)

The primary goal of this course is to become familiar with the diversity, ecology, and biogeochemical roles of Bacteria, Archaea, microbial Eukaryotes, viruses, and fungi in the marine environment. The course will also cover the latest discoveries in molecular microbial ecology. Each main topic will begin with a lecture and will be followed by a paper discussion. For the paper discussions, each student will present selected papers specified in the syllabus (or by consensus with the course instructors). Students will also participate in class discussions.

MEES687 Next Generation Sequence and Analysis (2 Credits)

Provides a general background to sequence analysis and then move through a series of student-directed tutorials, mostly on the command line, working with datasets for the final thesis. Students who do not have data will be provided with comparable sequence files to gain fluency. The goal is to provide students with hands-on experience with Next-Generation sequence datasets and tailor the instruction to further enhance research.

Credit Only Granted for: MEES618C or MEES687.

Formerly: MEES618C.

Additional Information: Offered synchronously to all MEES partner institutions via video. Please contact the instructor(s) for access and logistical information as needed.

MEES698 Special Topics in Marine-Estuarine-Environmental Sciences (1-4 Credits)

Credit according to time schedule and course organization. Lecture and/or laboratory series organized to study selected areas of environmental science not otherwise considered by existing courses. May be repeated for credit since topic coverage will change.

MEES699 Special Problems in Marine-Estuarine-Environmental Sciences (1-3 Credits)

Research on specialized topics under the direction of individual faculty members.

MEES708 Advanced Topics in Marine-Estuarine-Environmental Science (1-4 Credits)

Lectures, experimental courses and other specialized graduate training in various relevant disciplines.

Repeatable to: 12 credits if content differs.

MEES712 Advanced Population Dynamics and Assessment (4 Credits)

Quantitative and modeling skills, including understanding of population dynamics and responses of populations to exploitation and management actions. Coverage of population models of production, mortality, stock and recruitment, age and growth, and harvesting, and methods for using these models to provide management advice.

Prerequisite: MEES607 or BIOM601; or permission of instructor.

Credit Only Granted for: MEES698D or MEES712.

Formerly: MEES698D.

MEES713 Environmental Statistics II (3 Credits)

Students will extend statistical training to advanced topics of time series analysis and spatial statistics. After taking this course, students will be familiar with a variety of state-of-the-art approaches for qualitative analysis of time- and space-dependent data. Students will become competent users of these methods by practicing them in class and in their homework assignments using the statistical programming language R.

Credit Only Granted for: MEES708M or MEES713.

Formerly: MEES708M.

Additional Information: Offered synchronously to all MEES partner institutions. Please contact the instructor(s) for access and logistical information as needed.

MEES718 Study Groups on Issues in Marine Estuarine Environmental Sciences (1-2 Credits)

Active discussions on current environmental topics and issues. Efforts may result in manuscripts, technical report or innovative communication products.

Prerequisite: MEES601 or MEES609A; or permission of the advising committee and instructor.

Repeatable to: 6 credits if content differs.

MEES743 Aquatic Toxicology (3 Credits)

Comprehensive course in which a definitive description of basic concepts and principles, laboratory testing and field situations, as well as examples of typical data and their interpretation and use by industry and water resource managers, will be discussed. The toxicological action and fate of environmental pollutants will be examined in aquatic ecosystems, whole organisms and at the cellular, biochemical and molecular levels.

MEES753 Sediment Dynamics in Coastal and Estuarine Environments (3 Credits)

Focuses on sediment dynamics along the land-sea continuum, from intertidal to nearshore regions. The first part of the course develops relevant sediment-transport theories and equations used in the second part to examine coastal landscapes and features, including sediment/vegetation interactions. Integration of field observations and modeling approaches will be emphasized throughout the course, as will human impacts and responses to climate change.

Prerequisite: MEES640 or MEES660; or permission of instructor.

Credit Only Granted for: MEES698G or MEES753.

Formerly: MEES698G.

Additional Information: Offered synchronously to all MEES partner institutions. Please contact the instructor(s) for access and logistical information as needed.

MEES799 Masters Thesis Research (1-6 Credits)**MEES898 Pre-Candidacy Research (1-8 Credits)****MEES899 Doctoral Dissertation Research (1-8 Credits)**

MIEH - Maryland Institute for Applied Environmental Health

MIEH400 Introduction to Global Health (3 Credits)

Exploration of theoretical frameworks and practical perspectives on issues shaping the global health panorama. Determinants examined through: biological and epidemiological; social, cultural and economic; environmental and geographic; multi-section, legal and institutional perspectives with synopsis of how these issues are addressed by international and community organizations in developing countries.

Prerequisite: Minimum grade of C- in MIEH300; and 1 course with a minimum grade of C- from (SPHL100, PHSC300).

Restriction: Must be in the Public Health Science program or must have permission of the program director; and must have completed 60 credits.

Credit Only Granted for: MIEH400 or SPHL498A.

Formerly: SPHL498A.

MIEH407 One Health: Food Safety and Security (3 Credits)

This is a collaborative course with the University of Maryland and Cairo University, Cairo, Egypt to explore the One Health Foundation and its application to improving international food safety and security. The purpose of this global undergraduate class is to disseminate knowledge on One Health and its application to improving global food safety and security. Students will apply principles of One Health to ensure food safety and food security in Egypt.

Jointly offered with: MIEH607.

Restriction: Must have earned at least 75 credits .

Credit Only Granted for: MIEH607 or MIEH407.

MIEH480 Introduction to Occupational Health (3 Credits)

Through in-person site visits, hands-on activities and case studies, students will learn about healthy workplaces and their critical role in public health. The course will center on the field of occupational health and safety. Site visits will enable students to hear firsthand from workers, local health & safety professionals, and former students now in the field. Case studies will allow students to explore today's critical work hazards across various work environments and industries. Students will develop and apply essential skills, such as conducting a safety walk-through in a worksite, leading a worker safety training, and writing a safety plan for an employer. Upon course completion, students will be prepared to address traditional workplace problems, as well as emerging hazards like extreme heat, poor indoor air quality, and the mental health challenges of today's workplace.

Prerequisite: Minimum grade of C- in MIEH300 and EPIB301.

Recommended: BSCI201.

MIEH600 Foundations of Environmental Health (3 Credits)

Overview of the chemical, physical and biological hazards present in our living and working environment and their effects on human health. Topics include: exposure assessment, industrial hygiene and safety, pesticides, community and indoor pollution, food-borne diseases, solid and hazardous wastes, water resources, risk assessment, ecological issues and environmental laws.

Credit Only Granted for: HLTH761 or MIEH600.

Formerly: HLTH761.

MIEH605 Fundamentals of Global Health (3 Credits)

Exploration of theoretical frameworks and practical perspectives in global health with particular attention to the analysis of the biological, epidemiological, social, cultural and behavioral interactions that affect global health study and project implementation. The emphasis is on innovative solutions to health issues in underserved populations.

Credit Only Granted for: SPHL600 or SPHL698A.

Formerly: SPHL698A.

MIEH607 Global Classroom: Risk Based Approach to Ensure Global Food Safety and Security (3 Credits)

This is a collaborative course among the University of Maryland and Cairo University, Cairo, Egypt to explore the One Health Foundation and its application to improving international food safety and security. The purpose of this global class is to disseminate knowledge on One Health and its application to improving global food safety and security. Students will have the opportunity to collaborate with Cairo University and the Agriculture Research Center in Egypt to explore the current status and challenges of global food safety and security.

Jointly offered with: MIEH407.

Credit Only Granted for: MIEH407 or MIEH607.

MIEH609 Methods in Environmental Health (1-3 Credits)

This research-based rotation in environmental health sciences will provide graduate students with the opportunity to work closely with faculty researchers in the Maryland Institute for Applied Environmental Health (MIAEH) within the School of Public Health. Our research covers multiple fields within the environmental health sciences (e.g. environmental epidemiology, exposure science, risk assessment, environmental microbiology, environmental microbiology, environmental microbial genomics, food toxicology, airborne infection transmission, environmental justice, and children's environmental health) that involve either laboratory-based research or non-laboratory based studies. Students will not only gain invaluable research experience and interpersonal skills but also contribute to MIAEH's ongoing environmental health research programs.

Repeatable to: 6 credits.

MIEH610 Global Health Program Planning and Evaluation (3 Credits)

Development of health program and evaluation plans to address critical health problems in international settings, especially transitional or in-conflict countries. Emphasis on linking a tactical program plan to overall health problems of a nation, to include the policy and economic issues involved in assessment, implementation and evaluation.

Recommended: MIEH605.

Credit Only Granted for: MIEH610, SPHL610 or SPHL698D.

Formerly: SPHL698D and SPHL610.

MIEH620 Global Health Communication and Promotion (3 Credits)

Explores the critical components in developing, implementing and evaluating health/population promotion and communication interventions. Emphasis is on theory application to a variety of cultural settings. Formative and quantitative research methods will be utilized.

Recommended: MIEH605.

Credit Only Granted for: SPHL620 or SPHL698C.

Formerly: SPHL698C.

MIEH688 Seminar in the Maryland Institute for Applied Environmental Health: Current Topics in Environmental Health (1 Credit)

Invited and in-house research presentations from guest scientists, faculty members, and students, and critical analysis of journal articles on current topics in environmental and occupational health.

Repeatable to: 3 credits.

MIEH690 UMD Global STEWARDS: Experiential Exploration of Innovations at the Nexus of Food, Energy, and Water Systems (INFEWS) (2 Credits)

Experiential introduction to broad food, energy, water (FEW) nexus topics, focusing on how integration across the biological, physical, social, behavioral, computer and engineering sciences will be critical in solving FEW systems challenges. FEW nexus issues from molecular to societal levels and from local to global scales will be covered. Course meetings will include active learning-based lectures, discussions, on-campus and off-campus field trips, hands-on activities, brainstorming about interdisciplinary FEW systems projects, and guest lectures.

Restriction: Permission of instructor; and must be in UMD Global STEWARDS Fellows.

MIEH691 UMD Global STEWARDS: Project-Based Data Practicum at the Nexus of Food, Energy, and Water Systems (2 Credits)

The range of food-energy-water (FEW) systems challenges from local to global scales. During the semester, students will gain real-world experience by participating in the conceptualization and/or conduct of an interdisciplinary FEW systems project. Projects may employ engineering, life sciences, epidemiological or policy approaches; earth system sciences frameworks; computational methods; and/or other innovative approaches. Through this work, students will gain hands-on experience in study design, research methods, and data analysis across varying FEW disciplines. Each student will bring a diverse set of expertise to the projects, creating a microcosm for interdisciplinary team science. During the course, students will have the opportunity to refine oral and written communication skills, including team writing. The deliverable for the course may include a grant proposal, a manuscript, a FactSheet, an Op-Ed, or another actionable type of science/policy writing.

Prerequisite: MIEH690, .

Restriction: Permission of instructor; and must be in UMD Global STEWARDS Fellows.

MIEH698 Special Topics in Environmental Health (1-3 Credits)

Special topics in environmental health.

Repeatable to: 12 credits if content differs.

MIEH699 UMD Global STEWARDS: Seminal Findings, and Research and Policy in Progress at the Food, Energy, Water Nexus (1 Credit)

Engaging discourse covering seminal findings, as well as research and policy in progress at the food, energy, water (FEW) nexus. Course meetings will include dissections of groundbreaking FEW nexus articles; presentations by faculty members and students, followed by interdisciplinary discussions; and presentations by visiting leaders working at the FEW nexus across career sectors.

Restriction: Permission of instructor.

Repeatable to: 3 credits.

MIEH700 Advanced Environmental Health (3 Credits)

An advanced doctoral course in environmental health science focused on the application of knowledge gained in foundational and scientific methods courses to solve environmental health problems. The course will engage students in: problem identification; critical evaluation of the existing state of scientific knowledge and gaps regarding the problem; selection and use of appropriate scientific methods to assess the problem; generation of accurate conclusions based on critical evaluation of the findings; and, finally, accurate communication of findings, uncertainties and conclusions to various target audiences and stakeholders.

Prerequisite: MIEH600 and MIEH780; and permission of instructor.

MIEH720 Principles of Toxicology (3 Credits)

Overview of toxicology, including exposure pathways, toxicokinetics, dermal toxicants, carcinogens, and genetic, reproductive, immuno-, neuro-, target organs, complex mixtures, structure-activity analysis, and determinants of hypo- and hyper-susceptibility. Case studies of global national and regional interest.

Prerequisite: MIEH600; or permission of instructor.

Recommended: Must have completed some coursework in chemistry and/or biology.

MIEH721 Physiological Toxicology (3 Credits)

Emphasis on macromolecular, metabolic, cellular, and physiologic targets of environmental contaminants and assays to detect toxic effects at these levels. Discussion of effects of select environmental toxicants in the context of their disruption of normal processes. Examination of the design of short-term assays and their desirable features to maximize usefulness for predicting human disease.

Prerequisite: MIEH600.

Recommended: Must have completed coursework in chemistry, biology, biochemistry, and genetics.

MIEH722 Laboratory Methods in Environmental Health (3 Credits)

Application of chemical principles to environmental monitoring. Basic sampling techniques and laboratory tests to determine chemical and microbiological pollutants in water, air and soil from field-collected samples.

Prerequisite: MIEH600.

Recommended: Must have completed coursework in analytical chemistry, microbiology, biochemistry.

MIEH725 Environmental Analysis (3 Credits)

Fundamentals of environmental chemistry and in environmental media (water, air, soil) and in biota. Theory of sampling, chemical analysis and quality control for major environmental contaminants. Introduction to spatial and statistical analysis, use of maps and Geographic Information Systems, and use of environmental analysis in remediation and pollution prevention.

Prerequisite: MIEH600.

Recommended: MIEH722.

MIEH730 Environmental Justice, Built Environment, and Health Disparities (3 Credits)

This course will give students the opportunity to conduct an in-depth analysis of environmental justice and environmental racism in the United States and internationally. Students will synthesize their knowledge from environmental science courses with the concepts of civil rights and social justice to more fully understand the existing health disparities and how the built environment contributes to them.

Prerequisite: Must have completed an Environmental Health course.

MIEH735 Food Toxicology (3 Credits)

An introduction to basic concepts in toxicology in relation to toxic food contaminants and additives; both synthetic and naturally occurring. Focus on exposure routes, molecular targets and susceptible individuals. Also includes regulatory toxicology with respect food toxins.

Recommended: BCHM462, BSCI440, or CHEM131. Cross-listed with NFSC735.

Credit Only Granted for: MIEH735 or NFSC735.

MIEH740 Environmental Health Risk Assessment (3 Credits)

Review of the major methods of human and ecological risk assessment conducted by the U.S. Environment Protection Agency. Emphasis on sources of uncertainty.

Prerequisite: MIEH600; or permission of instructor.

MIEH742 Principles of Industrial Hygiene (3 Credits)

Theory and practice of industrial hygiene, including major industrial exposures and their sampling and measurement. Focus on specific industries, work populations, and environments.

Prerequisite: MIEH600 and MIEH720.

MIEH760 Spatial Epidemiology (3 Credits)

The purpose of this survey course is to provide students with an introduction to spatial resources and methods specific to public health, with an emphasis on epidemiology and environmental applications. Students will be introduced to spatial resources, concepts, and tools relevant to public health research and practice. They will acquire skills to interpret, evaluate, and design basic public health spatial research projects; and to conduct simple spatial analyses.

Prerequisite: Must have completed an Introduction biostatistics course.

Recommended: Completion of a graduate epidemiology course, or environmental health course, or geography/GIS course.

MIEH770 Law and Policy in Environmental Health (3 Credits)

Overview of laws that affect the environment, and the various ways in which businesses are regulated by the government in the interest of protecting the environment. International, Federal, state, and local laws and regulations related to the protection of human health and the regulation of environmental containments, including biological, physical and chemical factors affecting community health. Examination of the interactions between and differing responsibilities of various agencies enforcing environmental laws and regulations.

Prerequisite: MIEH600; or permission of instructor.

MIEH771 Exposure Assessment of Environmental Hazards (3 Credits)

Approaches and methods for determining exposure to environmental contaminants. Biomonitoring and genetic methods to detect recent exposures. Optimizing exposure assessment.

Prerequisite: MIEH600; and must have completed a graduate level statistics course with a B- or higher. Or permission of instructor.

MIEH773 Foodborne, Waterborne and Airborne Infectious Diseases (3 Credits)

In-depth study of foodborne, waterborne and airborne diseases caused by bacteria, viruses and parasites. Topics will include sources and detection of causative agents; their transmission to humans via food, water, air and other environmental media; and methods of disease prevention, including food safety approaches and drinking water treatment. Classes include lectures, discussions, field-trips and hands-on field sampling and laboratory activities.

Corequisite: MIEH600; or permission of instructor.

MIEH778 Practical Experience in Public Health (1-4 Credits)

Practice experience and seminar providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the practice experience will depend upon the student's background and career goals.

Restriction: Permission of SPHL-Maryland Institute for Applied Environmental Health.

Repeatable to: 4 credits.

Credit Only Granted for: MIEH785 or MIEH778.

MIEH780 Occupational Health (3 Credits)

A synthesis of epidemiology, toxicology, exposure science, risk assessment, and policy. Emphasis will be on methods for anticipating, recognizing, evaluating and controlling workplace hazards; the hierarchy of controls; and current hot topics in occupational health.

Prerequisite: MIEH720 and MIEH771; and must have completed SPHL602. Or permission of instructor.

MIEH783 Proposal Development and Marketing for Public Health Scientists (3 Credits)

Every scientist, whether in academia, government, or industry, must write compelling proposals if they are to succeed in having resources to pursue their passions and interests. To write a compelling proposal, we must develop clear and concise hypotheses and definitive ways to test them. But to have an impact, to get funded, to graduate, we must also excel at marketing our ideas and our achievements to other scientists and the public. This course is designed for doctoral students and postdoctoral fellows who want to develop and hone their proposal development and marketing skills.

MIEH785 Internship in Public Health (3 Credits)

Internship and seminar providing an opportunity to apply previously acquired knowledge and skills in a health or allied health organization. Setting of the internship will depend upon the student's background and career goals.

Restriction: Permission of SPHL-Maryland Institute for Applied Environmental Health.

Credit Only Granted for: MIEH785 or MIEH778.

MIEH786 Capstone Project in Public Health (3 Credits)

Capstone experience providing opportunity to apply knowledge and skills to a specific public health problem or issue. Completion of project relevant to public health under the direction of an advisor.

Prerequisite: Permission of SPHL-Maryland Institute for Applied Environmental Health.

MIEH788 Critical Readings in Environmental Health (1-3 Credits)

In-depth examination and critical discussion of the current literature relevant to environmental health.

Prerequisite: MIEH600.

Repeatable to: 3 credits if content differs.

MIEH789 Independent Study (1-6 Credits)

Individual reading and/or research under a specific faculty member in the department.

Prerequisite: Permission of SPHL-Maryland Institute for Applied Environmental Health.

MIEH799 Master's Thesis Research (1-6 Credits)**MIEH899 Doctoral Dissertation Research (1-8 Credits)**

MITH - Maryland Institute for Technology in the Humanities

MITH498 Special Topics in Applied Digital Humanities (3 Credits)

An introduction to special topics, and technical approaches, for theoretically grounded humanities and social sciences digital research. Class meetings will introduce students to a variety of technical approaches potentially applicable to the specific topical foci; the theoretical basis for selecting, evaluating, and modifying technical approaches; and best practices in project management.

Repeatable to: 9 credits if content differs.

MITH610 Introduction to Digital Studies in the Arts and Humanities (3 Credits)

An introduction to digital studies in the arts and humanities, broadly conceived as the critical, creative, and practical engagement with digital media, methods, tools, and experiences, as well as the theoretical and conceptual bases for understanding them.

MITH628 Special Topics in Digital Humanities (3 Credits)

A graduate level introduction to special topics, and technical approaches, for theoretically grounded humanities and social sciences digital research. Class meetings will introduce students to a variety of technical approaches potentially applicable to the specific topical foci; the theoretical basis for selecting, evaluating, and modifying technical approaches; and best practices in project management.

Repeatable to: 9 credits if content differs.

MITH729 Colloquium in Digital Studies (1 Credit)

Colloquium in support of the ARHU-MITH Graduate Certificate in Digital Studies. We will meet periodically (approximately 4-5 times a semester) to read and discuss current work in the field, interact with visiting speakers, share work in progress, learn new tools and methods, and hear research presentations from one another.

Repeatable to: 3 credits.

MITH735 Anatomy of Digital Humanities Research (3 Credits)

Positioned as a companion to a disciplinary research methods course, this course emphasizes best practices and critical approaches in the context of the lifecycle of a collaborative research project from ideation to publication to preservation. This course explores common digital methodologies as it teaches collaboration and fast prototyping to help students develop a reflexive critical approach to digital research projects. Upon completing the course, students will have a research plan, including the beginnings of a literature review, wireframes, and proposal for the lifecycle of the research project.

MITH741 Creative Ambiguities: Embodiment, Text, and the Digital Humanities (3 Credits)

The course asks what theoretical and applied research emerges out of the space of digital humanities and the performing arts. It will equip students with a nuanced overview of the history of the digital within performance and explore various technical approaches that can enable the exploration of intersections of research and practice, the connections between creation and research, and yes, even "cool" performance.

Prerequisite: MITH610; or permission of instructor.

Recommended: MITH610 and MITH735.

MLAW - MPower Undergraduate Law Programs

MLAW404 Law & Society Capstone (3 Credits)

An exploration of the implications of technology on law and society from a variety of perspectives. Significant issues will be taken from contemporary scholarship and court cases.

Restriction: Student must be enrolled in the Law and Society minor.

MLAW411 Appellate Advocacy I (3 Credits)

By the end of this class, and with proper supervision, students should be able to competently brief and argue an appeal before any appellate court in the country. The skills taught in this class also transfer to other contexts that demand clear legal analysis, efficient and comprehensive legal research, excellent writing and effective oral advocacy. For students interested in pre-law skills, whether they plan to go to law school or some career that requires analytical reasoning, persuasive writing, and advocacy skills.

Recommended: MLAW304.

MOCB - Molecular and Cell Biology

MOCB608 Molecular and Cell Biology Seminar (1-2 Credits)

Seminar in molecular and cell biology.

Repeatable to: 5 credits if content differs.

MOCB639 Advanced Cell Biology (3 Credits)

Recent advances in key areas of modern cell biology.

Repeatable to: 6 credits if content differs.

MOCB699 Laboratory Rotation (2-3 Credits)

Laboratory experience in molecular-cell biology.

Prerequisite: Permission of CMNS-Molecular & Cell Biology Program (MCB).

Restriction: Must be in one of the following programs (Cell Biology and Molecular Genetics (Doctoral); Cell Biology and Molecular Genetics (Master's)).

Repeatable to: 6 credits if content differs.

MOCB708 Advanced Topics in Molecular and Cell Biology (1-4 Credits)

Lectures, experimental courses, and other special instructions in various areas of molecular or cell biology.

Repeatable to: 6 credits if content differs.

MOCB898 Pre-Candidacy Research (1-8 Credits)**MOCB899 Doctoral Dissertation Research (1-8 Credits)**

MSML - Machine Learning

MSML601 Probability and Statistics (3 Credits)

Provides a solid understanding of the fundamental concepts of probability theory and statistics. The course covers the basic probabilistic concepts such as probability space, random variables and vectors, expectation, covariance, correlation, probability distribution functions, etc. Important classes of discrete and continuous random variables, their inter-relation, and relevance to applications are discussed. Conditional probabilities, the Bayes formula, and properties of jointly distributed random variables are covered. Limit theorems, which investigate the behavior of a sum of a large number of random variables, are discussed. The main concepts random processes are then introduced. The latter part of the course concerns the basic problems of mathematical statistics, in particular, point and interval estimation and hypothesis testing.

Prerequisite: Undergraduate courses in calculus and basic linear algebra.

Cross-listed with: DATA601, BIOI601.

Credit Only Granted for: BIOI601, DATA601 or MSML601.

MSML602 Principles of Data Science (3 Credits)

An introduction to the data science pipeline, i.e., the end-to-end process of going from unstructured, messy data to knowledge and actionable insights. Provides a broad overview of what data science means and systems and tools commonly used for data science, and illustrates the principles of data science through several case studies.

Cross-listed with: DATA602, BIOI602.

Restriction: Must be in one of the following programs: (Data Science Post-Baccalaureate Certificate, Master of Professional Studies in Data Science and Analytics, or Master of Professional Studies in Machine Learning).

Credit Only Granted for: BIOI602, DATA602, MSML602 or CMSC641.

Formerly: CMSC641.

MSML603 Principles of Machine Learning (3 Credits)

A broad introduction to machine learning and statistical pattern recognition. Topics include: Supervised learning: Bayes decision theory, discriminant functions, maximum likelihood estimation, nearest neighbor rule, linear discriminant analysis, support vector machines, neural networks, deep learning networks. Unsupervised learning: clustering, dimensionality reduction, PCA, auto-encoders. The course will also discuss recent applications of machine learning, such as computer vision, data mining, autonomous navigation, and speech recognition.

Cross-listed with: DATA603, BIOI603, MSQC603.

Restriction: Must be in one of the following programs: (Data Science Post-Baccalaureate Certificate, Master of Professional Studies in Data Science and Analytics, or Master of Professional Studies in Machine Learning).

Credit Only Granted for: BIOI603, DATA603, MSML603, MSQC603 or CMSC643.

Formerly: CMSC643.

MSML604 Introduction to Optimization (3 Credits)

Focuses on recognizing, solving, and analyzing optimization problems. Linear algebra overview: vector spaces and matrices, linear transformations, matrix algebra, projections, similarity transformations, norms, eigen-decomposition and SVD. Convex sets, convex functions, duality theory and optimality conditions. Unconstrained optimization: 1D search, steepest descent, Newton's method, conjugate gradient method, DFP and BFGS methods, stochastic gradient descent. Constrained optimization: projected gradient methods, linear programming, quadratic programming, penalty functions, and interior-point methods. Global search methods: simulated annealing, genetic algorithms, particle swarm optimization.

Prerequisite: Undergraduate courses in calculus and basic linear algebra.

Recommended: DATA601.

MSML605 Computing Systems for Machine Learning (3 Credits)

Programming, software and hardware design and implementation issues of computing systems for machine learning. Topics in the programming/software domain will include: basic Python program structure, variables and assignment, built-in data types, flow control, functions and modules; basic I/O, and file operations. Classes, object-oriented programming and exceptions. Regular expressions, database access, network programming and sockets. Introduction to the Numpy, Scipy and Matplotlib libraries. Topics in the hardware domain include computer architecture, CPUs, single- and multi-core architectures, GPUs, memory and I/O systems, persistent storage, and virtual memory. Parallel processing architectures, multiprocessing and cluster processing.

Restriction: Must be in the MPS in Machine Learning program.

MSML606 Algorithms and Data Structures for Machine Learning (3 Credits)

Provides both a broad coverage of basic algorithms and data structures. Topics include sorting, searching, graph and string algorithms; greedy algorithm, branch-and-bound, dynamic programming and job scheduling; Arrays, linked lists, queues, stacks, and hash tables; Algorithm complexity, best/average/worst case analysis. Applications selected from machine learning problems.

MSML612 Deep Learning (3 Credits)

Provides an introduction to the construction and use of deep neural networks: models that are composed of several layers of nonlinear processing. The class will focus on the main features in deep neural nets structures. Specific topics include backpropagation and its importance to reduce the computational cost of the training of the neural nets, various coding tools available and how they use parallelization, and convolutional neural networks. Additional topics may include autoencoders, variational autoencoders, convolutional neural networks, recurrent and recursive neural networks, generative adversarial networks, and attention-based models. The concepts introduced will be illustrated by examples of applications chosen among various classification/clustering questions, computer vision, natural language processing.

Prerequisite: DATA603 or MSML603.

Cross-listed with: DATA612.

Credit Only Granted for: DATA612 or MSML612.

MSML640 Computer Vision (3 Credits)

An introduction to basic concepts and techniques in computer vision. Topics include low-level operations such as image filtering, correlation, edge detection and Fourier analysis. Image segmentation, texture and color analysis. Perspective, cameras and 3D reconstruction of scenes using stereo and structure from motion. Deep learning for object detection, recognition and classification in images and video.

Prerequisite: BIOI603, DATA603, or MSML603.

Cross-listed with: DATA640.

Credit Only Granted for: MSML640 or DATA640.

MSML641 Natural Language Processing (3 Credits)

Introduces fundamental concepts and techniques involved in getting computers to deal more intelligently with human language. Focused primarily on text (as opposed to speech), the class will offer a grounding in core NLP methods for text processing (such as lexical analysis, sequential tagging, syntactic parsing, semantic representations, text classification, unsupervised discovery of latent structure), key ideas in the application of deep learning to language tasks, and consideration of the role of language technology in modern society.

Prerequisite: DATA603 or MSML603.

Cross-listed with: DATA641.

Credit Only Granted for: DATA641 or MSML641.

MSML650 Cloud Computing (3 Credits)

Presents the state of the art in cloud computing technologies and applications. Topics will include: telecommunications needs, architectural models for cloud computing, cloud computing platforms and services. Data center networking, server, network and storage virtualization technologies, and containerization. Cloud operating and orchestration systems. Security, privacy, and trust management; resource allocation and quality of service; interoperability and internetworking.

Cross-listed with: DATA650.

Credit Only Granted for: MSML650 or DATA650.

MUED - Music Education

MUED411 Teaching Elementary Instrumental Music II (4 Credits)

Prepare instrumental-emphasis music education majors to synthesize the knowledge and skills that will enable them to develop and/or maintain an exemplary curricular-oriented, research-based, comprehensive elementary instrumental music program.

Prerequisite: MUED320 and MUED311.

Restriction: Must be in Music Education program.

MUED420 Teaching Secondary Instrumental Music II (4 Credits)

Prepare instrumental-emphasis music education majors to synthesize the knowledge and skills that will enable them to develop and/or maintain an exemplary, curricular-oriented, research-based, comprehensive secondary instrumental program.

Prerequisite: MUED320 and MUED311.

Restriction: Must be in Music Education program.

MUED422 Teaching General Music II (4 Credits)

Designed as an advanced music methods course and field experience for students who are preparing for a career in general music. The field experience is a practicum that is co-supervised by the university instructor and a general music educator.

Prerequisite: MUED322 and MUED333.

Restriction: Must be in Music Education program.

Credit Only Granted for: MUED422 or MUED471.

Formerly: MUED471.

MUED433 Teaching Choral Music (4 Credits)

Preparation for teaching choral classes through the integration of conducting technique, vocal pedagogy, knowledge of repertoire, and the application of appropriate instructional strategies in the context of peer teaching and field experience assignments.

Prerequisite: MUED422.

Restriction: Must be in Music Education program.

Credit Only Granted for: MUED472 or MUED433.

Formerly: MUED472.

MUED473 Teaching General Music for Instrumentalists (2 Credits)

Introduction to current trends, materials and approaches in general music instruction.

Prerequisite: MUED311; and MUED320.

Restriction: Must be in Music Education program.

MUED474 Field Experiences: Pre-Student Teaching (2 Credits)

Field experiences to fulfill teaching requirements in K-12 music teacher education program.

Prerequisite: MUED420 and MUED411; or (MUED472 and MUED471).

Restriction: Permission of ARHU-School of Music department; and senior standing.

MUED484 Student Teaching in Elementary School: Music (6 Credits)

Fulfills elementary teaching requirements in K-12 music teacher education program. Limited to music education majors who have previously applied.

Corequisite: MUED494.

Restriction: Permission of ARHU-School of Music department; and must be in Music Education program.

MUED489 Field Experiences (1 Credit)

Series of field experiences in K-12 settings.

Restriction: Permission of ARHU-School of Music department; and must be in Music Education program.

Repeatable to: 6 credits.

MUED494 Student Teaching in Secondary School: Music (6 Credits)

Fulfill secondary teaching requirements in K-12 music teacher education program. Limited to music education majors who have previously applied.

Corequisite: MUED484.

Restriction: Permission of ARHU-School of Music department; and must be in Music Education program.

MUED499 Workshops, Clinics, Institutes (1-3 Credits)

Innovative and experimental dimensions of music education offered to meet the needs of music teachers and music supervisors allowing students to individualize their programs.

Repeatable to: 6 credits if content differs.

MUED669 Domain Project in Music Education I (3 Credits)

Application of musicological and/or ethnomusicological concepts within the context of PreK-12 music teaching and learning. Synthesis of knowledge and skills related to musicology, musicology, and/or ethnomusicology pedagogy, curriculum development, and social sciences research through the development and execution of a classroom-based domain project.

Restriction: Permission of the School of Music.

MUED672 Advanced Instrumental Methods in Music Education (3 Credits)

Teaching instrumental music in the K-12 setting, including recruiting, literature selection, curriculum, rehearsal techniques, and pedagogical approaches.

Restriction: Permission of ARHU-School of Music department.

MUED673 Beginning String Instruction: Principles and Applications in Group Process (3 Credits)

A survey of string instrument techniques, pedagogy, and materials for the elementary school. Includes hands-on review and extension of beginning-level string playing and teaching techniques through an organized, sequential approach.

Restriction: Permission of ARHU-School of Music department.

MUED677 Advanced Studies in Choral Music Education (3 Credits)

A critical review of choral music education in both school and community. Includes historical foundations, philosophical perspectives, and practical teaching applications in light of current scholarship.

Restriction: Permission of ARHU-School of Music department.

MUED679 Domain Project in Music Education II (3 Credits)

Application of concepts from music theory within the context of PreK-12 music teaching and learning. Synthesis of knowledge and skills related to music theory pedagogy, curriculum development, and social sciences research through the development and execution of a classroom-based domain project.

Restriction: Permission of the School of Music.

MUED688 Music Cultures in the Classroom II: Curriculum Materials and Teaching Strategies (3 Credits)

Designed to assist the music teacher in integrating music from selected cultures into the curriculum. Curriculum materials are presented and teaching strategies demonstrated.

Recommended: MUED687.

Restriction: Must be in a major within ARHU-School of Music department.

Repeatable to: 9 credits if content differs.

MUED689 Domain Project in Music Education III (3-6 Credits)

Application of concepts from music performance pedagogy within the context of PreK-12 music teaching and learning. Synthesis of knowledge and skills related to music performance pedagogy, curriculum development, and social sciences research through the development and execution of a classroom-based domain project.

Restriction: Permission of the School of Music.

MUED690 Research Methods in Music and Music Education (3 Credits)

The application of methods of research to problems in the fields of music and music education. The preparation of bibliographies and the written exposition of research projects in the area of the student's major interest.

MUED691 Psychology of Music Teaching and Learning (3 Credits)

An overview of the psychological bases of musical behavior, with particular emphasis on the teaching and learning of music.

Restriction: Permission of ARHU-School of Music department.

MUED692 Foundations and Perspectives of Music Education (3 Credits)

An introduction to historical, sociological, and philosophical perspectives of music education.

Restriction: Permission of ARHU-School of Music department.

MUED696 Assessment in Music Education (3 Credits)

Historical and theoretical nature of assessment in education. Application and critique of various materials and approaches to assessment in music education. Development of appropriate evaluation and reporting tools.

Restriction: Permission of ARHU-School of Music department.

MUED697 Curriculum & Assessment in Music Education (3 Credits)

Theoretical and practical knowledge related to curriculum, assessment, and evaluation in music education. Course topics include: a) aspects of philosophy, sequencing, and design in music curricula; b) reliability, validity, and fairness in assessment; c) planning for and designing assessment of student knowledge and skills; d) policy, procedures, and outcomes associated with music teacher evaluation.

MUED698 Current Trends in Music Education (1-3 Credits)

A survey of current and emerging philosophies, methodologies and curricula in music education and their implementation. The influence of educational and social changes and the expanding musical scene upon the music programs for children of all ages and for teacher education.

Repeatable to: 8 credits if content differs.

MUED699 Workshops, Clinics, Institutes (1-3 Credits)

Innovative approaches to various dimensions of music education are offered to meet the pedagogical needs of music teachers. The maximum number of credits that may be earned under this course symbol toward any degree is six semester hours; the symbol may be used two or more times until six semester hours have been reached.

Repeatable to: 10 credits.

MUED729 Doctoral Colloquium in Music Education (1 Credit)

For students in PhD Program in Music Education. Meets approximately 4-5 times per semester to read and discuss current work in the field, interact with visiting speakers, share work in progress, learn new tools and methods, and hear research presentations from one another.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

MUED780 Seminar in Music Teacher Education (3 Credits)

Development of knowledge and skills necessary for music teacher educators. Topics include history of and reform movements in music teacher education, recruitment, education and certification of music teachers and inservice programs.

Restriction: Must have doctoral standing in a Music Education program.

MUED785 Teaching Music in Higher Education (3 Credits)

Prepare students for music faculty positions in higher education institutions. The course readings, discussions, assignments, and experiences are aimed to develop the knowledge, skills, and dispositions necessary to be a successful member of the faculty at a variety of institutions.

MUED790 Design and Analysis of Research in Music Education (3 Credits)

Advanced applications of quantitative and qualitative social science research paradigms to research problems in the field of music education. Topics include the formation of researchable questions; the design of experimental, quasi-experimental, descriptive, and qualitative research studies; and the analysis and interpretation of research data.

Prerequisite: Must have completed a college-level statistics course. And MUED690; or an equivalent master's level research in music education course.

MUSC - School of Music

MUSC400 Music Pedagogy (3 Credits)

Conference course. A study of major pedagogical treatises in music, and an evaluation of pedagogical techniques, materials, and procedures.

Prerequisite: MUSP315; and permission of ARHU-School of Music department.

MUSC420 Introduction to Ethnomusicology (3 Credits)

Study of principal concepts and methods in ethnomusicology, covering history of field, linguistics and anthropology, music in various settings, musical cognition and ethnography of performance.

Prerequisite: MUSC210 and MUSC130; or permission of ARHU-School of Music department.

Restriction: Junior standing or higher.

MUSC428 Repertoire Coaching of Vocal or Chamber Music (2 Credits)

A course for piano students who wish to go further than the work offered in MUSC128, MUSC228 and MUSC328 by becoming specialists in the areas of vocal coaching or chamber music coaching. Elements of pedagogy, conducting and responsible artistic decision-making for the entire musical production.

Prerequisite: Must have completed or be concurrently enrolled in MUSC328.

MUSC436 Jazz: Then and Now (3 Credits)

Major styles and influential artists of the past 75 years of jazz.

MUSC438 Area Studies in Ethnomusicology (3 Credits)

Advanced study of musics in selected parts of the world.

Repeatable to: 9 credits if content differs.

MUSC439 Collegium Musicum (1 Credit)

Open to undergraduates and graduates, music majors and non-majors. Procurement, edition and performance of music not belonging to a standard repertory: early music, compositions for unusual performing media, works which demand reconstruction of their original circumstances of performance. Outcome of a semester's work may be one or more performances for the public.

Prerequisite: Permission of ARHU-School of Music department.

Repeatable to: 5 credits.

MUSC442 Creating Historic Woodwinds (3 Credits)

In this class, students will learn the art of woodworking and blend techniques of modern and historic instrument-making methods. Using wood lathes, metalworking tools, 3d scanners and selective laser sintering 3d printers. Student teams will first train to acquire the skills needed to use fabrication equipment. Each mixed team will then share their individual discipline's skills to help contribute to the creation of a completed musical instrument. Along the way, we'll explore the historical and cultural context of instrument making and the musical period.

Cross-listed with: ENES442.

Credit Only Granted for: MUSC442 or ENES442.

MUSC443 Solo Vocal Literature (3 Credits)

The study of solo vocal literature from the Baroque Cantata to the Art Song of the present. The Lied, Melodie, vocal chamber music and the orchestral song are examined.

Prerequisite: MUSC330 and MUSC331; or students who have taken courses with comparable content may contact the department.

MUSC444 Wind and Percussion Literature (1 Credit)

Recital program notes and written projects in wind or percussion literature.

Prerequisite: Permission of ARHU-School of Music department.

Corequisite: MUSP420 or MUSP419.

MUSC445 Survey of the Opera (3 Credits)

A study of the music, librettos and composers of the standard operas.

Prerequisite: MUSC330 and MUSC331; or students who have taken courses with comparable content may contact the department.

MUSC446 String Literature (1 Credit)

Recital program notes and written projects in string literature.

Prerequisite: MUSP316; and permission of ARHU-School of Music department.

MUSC448 Selected Topics in Music (1-3 Credits)

Prerequisite: Permission of ARHU-School of Music department.

Repeatable to: 6 credits if content differs.

MUSC448E Arts Entrepreneurship and the Creative Profession (3 Credits)

Introduces students to arts entrepreneurship in preparation for diverse and ever-changing careers in the creative fields. Students will practice and develop their entrepreneurial mindsets and learn about different frameworks for audience engagement. Topics include financial management, revenue development, business planning, and the "need-to-knows" of the gig economy. Throughout the semester, students will have the opportunity to learn from a variety of entrepreneurs in the arts and to evaluate their future career paths.

Recommended: ARHU240.

Cross-listed with: ARHU340.

Credit Only Granted for: ARHU340 or MUSC448E.

MUSC450 Musical Form (3 Credits)

A study of the principles of organization in music with emphasis on eighteenth and nineteenth century European music. Reading and analysis of scores exemplifying the musical forms.

Prerequisite: MUSC251.

MUSC451 Analysis of Music (3 Credits)

A course in the analysis of music. Discussion of individual works, with emphasis on their unique characteristics and on the relation of analysis to performance.

Prerequisite: MUSC450; or permission of instructor.

MUSC453 Jazz Improvisation I (3 Credits)

Jazz theory, notational conventions, improvisation techniques, reading and analysis of music, and performance in small combo format.

Prerequisite: MUSC251; or students who have taken courses with comparable content may contact the department. And permission of ARHU-School of Music department.

Credit Only Granted for: MUSC345 or MUSC453.

Formerly: MUSC345.

MUSC454 Jazz Improvisation II (3 Credits)

Continuation of MUSC453 including scoring and transcription.

Prerequisite: MUSC453; or students who have taken courses with comparable content may contact the department. And permission of ARHU-School of Music department.

Credit Only Granted for: MUSC346 or MUSC454.

Formerly: MUSC346.

MUSC455 Theory of Jazz (3 Credits)

Analysis of jazz harmony, with emphasis on principles of substitution, reharmonization, and syntax. Topics may also include chord/scale relationships, phrasing and articulation, notation, and introductory arranging concepts such as orchestration and form.

Prerequisite: MUSC250; or permission of ARHU-School of Music department.

Restriction: Must be in a major within ARHU-School of Music department.

MUSC456 Jazz Arranging (3 Credits)

A comprehensive approach to jazz arranging. Topics to include chord scale theory, voicing techniques, part and score layout, and formal construction of an arrangement.

Prerequisite: MUSC455; and permission of ARHU-School of Music department.

Credit Only Granted for: MUSC448N or MUSC456.

Formerly: MUSC448N.

MUSC460 Tonal Counterpoint I (3 Credits)

A course in Eighteenth-Century contrapuntal techniques, analysis and original composition of two-voice dances, preludes, and inventions. Includes an introduction to the study of fugue and canon.

Prerequisite: MUSC251; or permission of ARHU-School of Music department.

MUSC461 Theory and Analysis of Atonal and Twelve-tone Music (3 Credits)

An advanced technical introduction to theory and analysis of atonal and twelve-tone music, with an emphasis on music by Schoenberg, Webern, Bartok, and Stravinsky.

Prerequisite: MUSC251 and MUSC450; and permission of ARHU-School of Music department.

Restriction: Must be in Music Theory and Composition program. Jointly offered with MUSC661.

Credit Only Granted for: MUSC461 or MUSC661.

MUSC463 Technology and a Career in Music (3 Credits)

A hands-on introduction to technology as it applies to music creation and recording. Digital audio workstations, music notation software, and cloud-based music technology are used to create and manipulate musical examples with an eye toward their practical applications for professional musicians.

Recommended: Ability to read music on a grand staff (treble and bass clef).

Additional Information: No previous experience with technology is required.

MUSC464 The Theories of Heinrich Schenker (3 Credits)

An advanced analysis course in tonal music with specific emphasis on the theories of the early 20th century theorist Heinrich Schenker. Specific analyses of music by Bach, Mozart, Haydn, Beethoven, Chopin, and Brahms.

Prerequisite: MUSC251 and MUSC450; and permission of ARHU-School of Music department.

Restriction: Must not have completed MUSC651.

Credit Only Granted for: MUSC464 or MUSC651.

MUSC467 Piano Pedagogy I (3 Credits)

A study of major pedagogical treatises in music, and an evaluation of pedagogical techniques, materials, and procedures.

Prerequisite: Permission of ARHU-School of Music department.

MUSC468 Piano Pedagogy II (3 Credits)

Application of the studies begun in MUSC467 to the actual lesson situation. Evaluation of results.

Prerequisite: MUSC467; and permission of ARHU-School of Music department.

Repeatable to: 6 credits.

MUSC469 Orchestral Excerpts for String Players (1 Credit)

In-depth study of the orchestral excerpts required for professional orchestra auditions.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: MUSC469, MUSC448B, MUSC448Q, MUSC448V, or MUSC448X.

Formerly: MUSC448B, MUSC448Q, MUSC448V, and MUSC448X.

MUSC470 Harmonic and Contrapuntal Practices of the Twentieth Century (3 Credits)

A theoretical and analytical study of twentieth century materials.

Prerequisite: MUSC251; or students who have taken courses with comparable content may contact the department. And permission of ARHU-School of Music department.

MUSC471 Contemporary Compositional Techniques (3 Credits)

Continuation of MUSC470, with emphasis on the analysis of individual works written since 1945.

Prerequisite: MUSC470; or permission of ARHU-School of Music department.

MUSC472 Music Composition for Music Majors (3 Credits)

A course for music majors who wish to develop skills and creative abilities in music composition. Student writing projects will be discussed in class and models of compositional techniques will be studied in literature from diverse styles and style periods.

Prerequisite: MUSC450 or equivalent; and permission of instructor.

Restriction: Registration restricted to music majors who are not majoring in music composition (cannot be in Major code: 1004B).

Credit Only Granted for: MUSC4480 or MUSC472.

Formerly: MUSC4480.

MUSC481 Music in the Renaissance (3 Credits)

Survey of western music from 1450 to 1600.

MUSC482 Music in the Baroque Era (3 Credits)

Survey of western music from 1600 to 1750.

MUSC484 Music in the Romantic Era (3 Credits)

Survey of western music from 1820 to 1900.

MUSC486 Orchestration I (3 Credits)

A study of the ranges, musical functions and technical characteristics of the instruments and their color possibilities in various combinations. Practical experience in orchestrating for small and large ensembles.

Prerequisite: MUSC251; and permission of ARHU-School of Music department.

MUSC490 Conducting (2 Credits)

Vocal and instrumental baton techniques.

Prerequisite: MUSC251.

MUSC491 Conducting II (2 Credits)

Baton techniques applied to score reading, rehearsal techniques, tone production, style and interpretation.

Prerequisite: MUSC490; or students who have taken courses with comparable content may contact the department.

MUSC492 Keyboard Music I (3 Credits)

The history and literature of harpsichord and solo piano music from its beginning to the romantic period. Emphasis is placed on those segments of repertory which are encountered in performance and teaching situations at the present time.

Prerequisite: Permission of ARHU-School of Music department.

MUSC493 Keyboard Music II (3 Credits)

The history and literature of harpsichord and solo piano music from the Romantic period to the present. Emphasis is placed on those segments of repertory which are encountered in performance and teaching situations at the present time.

Prerequisite: MUSC492; and permission of ARHU-School of Music department.

MUSC499 Independent Studies (1-3 Credits)

Independent research on a topic chosen in consultation with the instructor, which may culminate in a paper or appropriate project.

Prerequisite: Permission of ARHU-School of Music department.

Additional Information: May be repeated once for credit.

MUSC601 Advanced English Lyric Diction (1 Credit)

Concepts, strategies and techniques for singing operatic, oratorio and song literature in English: stress patterns, linkage, stressed and non stressed vowels, diphthongs, placement of consonants and vowels, and communication of text with emphasis on current performance practices. Use of the International Phonetic Alphabet (IPA) will be stressed.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)). And permission of instructor; or admission to graduate voice program.

MUSC602 Advanced Italian Lyric Diction (1 Credit)

Concepts, strategies and techniques for singing operatic and song literature in Italian: syllabification, vowels, stressed and unstressed syllables, diphthongs, glides and elisions, single and double consonants with emphasis on current performance practices.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)) . And permission of instructor; or admission to graduate voice program.

MUSC603 Advanced German Lyric Diction (1 Credit)

Concepts, strategies and techniques for singing operatic and song literature in German: single and double consonants, the use of the glottal, the German closed (e) and (o) vowels, the "schwa" and consonant clusters. Mastery of the International Phonetic Alphabet (IPA) as it applies to "Hochdeutsch" will be expected.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)) . And permission of instructor; or admission to graduate voice program.

MUSC604 Advanced French Lyric Diction (1 Credit)

Concepts, strategies and techniques for singing operatic and song literature in French: phoneticization, formation and singing of the vowel-sounds, semi-consonants, and consonants; the liaison; legato singing in French; the hiatus, mute and aspirate 'h'; stress and word rhythm. Use of the International Phonetic Alphabet (IPA) will be stressed.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)) . And permission of instructor; or admission to graduate voice program.

MUSC605 Opera Repertory I (1 Credit)

Advanced vocal coaching of selections from the Italian, French, German, and English opera repertory: musical accuracy; language facility; diction clarity; and dramatic interpretation.

Prerequisite: MUSC602; or permission of instructor.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)).

MUSC606 Opera Repertory II (1 Credit)

Continuation of MUSC 605. Advanced vocal coaching of selections from the Italian, French, German and English opera repertory: musical accuracy, language facility; diction clarity; and dramatic interpretation.

Prerequisite: MUSC605; or permission of instructor.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)).

MUSC608 Chamber Music Repertory (1-3 Credits)

Prerequisite: graduate standing as a major in performance. A study, through performance, of diversified chamber music for standard media.

Repeatable to: 99 credits.

Additional Information: May be repeated for credit to the maximum credit designated in the student's major degree program.

MUSC609 Piano Chamber Music Practicum and Analysis (2 Credits)

Study of repertoire written for piano in duos or with several instruments, to develop an accompanists advanced performance skills in listening, balance, nuance in dynamics, harmonic motion and phrasing.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 4 credits.

MUSC610 Research Methods, Bibliography, and Guided Writings (3 Credits)

Survey of bibliographic material in ethnomusicology. Guided writing utilizing specific bibliography.

MUSC611 Opera Techniques I (2 Credits)

Techniques for opera performance: Improvisation; Acting I, Scene Study I; and Movement I. Practical application of styles and techniques to operatic repertoire.

Corequisite: MUSC601.

Restriction: Permission of director of opera; and must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)).

MUSC612 Opera Techniques II (2 Credits)

Continuation of MUSC 611. Techniques for opera performance: Scene Study II; Movement II; and Mask.

Prerequisite: Minimum grade of B- in MUSC611.

Corequisite: MUSC602.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)) ; and permission of Director of Opera required.

MUSC613 Opera Techniques III (2 Credits)

Continuation of MUSC 612. Techniques for opera performance: Scene Study III; Movement III; and Shakespeare.

Prerequisite: Minimum grade of B- in MUSC612; and permission of Director of Opera required.

Corequisite: MUSC603 and MUSC605.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)).

MUSC614 Opera Techniques IV (2 Credits)

Continuation of MUSC 613. Techniques for opera performance: Scene Study IV and Movement IV.

Prerequisite: Minimum grade of B- in MUSC613.

Corequisite: MUSC606 and MUSC604.

Restriction: Must be in one of the following programs (Music - Doctoral (Doctoral); Music - Master (Master's)) ; and permission of Director of Opera required.

MUSC620 Analysis of World Music (3 Credits)

Development of skills for auditory analysis of diverse musical systems.

Recommended: Completion of a seminar in transcription.

MUSC629 Ensemble (1 Credit)

Rehearsal and performance of selected works for small and large instrumental ensembles.

Repeatable to: 36 credits.

MUSC631 Seminar in Organology (3 Credits)

Advanced study of musical instruments of the world, their morphology, musical and cultural function.

Restriction: Permission of ARHU-School of Music department.

MUSC632 The Anthropology of Music (3 Credits)

Explores how leading theoretical paradigms in socio-cultural anthropology have been incorporated into and shaped ethnomusicological research.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUET650 or MUSC632.

Formerly: MUET650.

MUSC633 Field Methods in Ethnomusicology (3 Credits)

Introduction to ethnographic theory and fieldwork methods (participant observation, interviewing, etc.) in ethnomusicology. Students develop and carry out their own fieldwork projects as part of the course.

Restriction: Permission of ARHU-School of Music department.

MUSC634 Field Methods in Ethnomusicology II (3 Credits)

Advanced training in field research techniques and issues including multimedia recording and data management, interview and survey techniques, grant writing, and research ethics.

Prerequisite: MUSC660.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUET661 or MUSC634.

Formerly: MUET661.

MUSC636 Field Methods in Ethnomusicology III (3 Credits)

Continuation of Field Methods in Ethnomusicology II. Further development of skills in data collection and interpretation, culminating in an urban musical ethnography project and document.

Prerequisite: MUSC634.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUET662 or MUSC636.

Formerly: MUET662.

MUSC639 Seminar in Music (3 Credits)

The work of one major composer (Bach, Beethoven, etc.) will be studied.

Prerequisite: MUSC330 and MUSC331.

Restriction: Permission of instructor.

Repeatable to: 99 credits if content differs.

MUSC642 Early Music Notation (3 Credits)

Aspects of notation in music before 1600; transcription into modern notation.

MUSC643 Seminar in Solo Vocal Literature I (3 Credits)

An intensive study of solo vocal literature from its origin to the present.

Prerequisite: MUSC443; or students who have taken courses with comparable content may contact the department.

MUSC644 Seminar in Solo Vocal Literature II (3 Credits)

A continuation of MUSC 643 with an emphasis on areas of individual interest.

Prerequisite: MUSC643; or students who have taken courses with comparable content may contact the department.

MUSC645 Seminar in Vocal Pedagogy (3 Credits)

A study of the physiological, psychological and acoustical aspects of the teaching of singing combined with independent study and research in areas of individual interest.

Prerequisite: MUSC400; or students who have taken courses with comparable content may contact the department.

MUSC646 Introduction to Musicology (3 Credits)

An introduction to the basics of musicological research, including sources, methodologies, and techniques, as well as the fundamentals of both academic and non-academic writing.

Prerequisite: Graduate student standing in in the School of Music.

Credit Only Granted for: MUSC648 or MUSC646.

MUSC648 Seminar in Music Research (3 Credits)

An introduction to graduate study in the history and literature of music. Bibliography and methodology of systematic and historical musicology.

Prerequisite: MUSC331.

MUSC649 Ensemble (1 Credit)

Repeatable to: 36 credits if content differs.

MUSC651 The Theories of Heinrich Schenker (3 Credits)

The analytical methods of Heinrich Schenker with application of those theories to musical literature from the Baroque, Classical and Romantic periods.

Prerequisite: MUSC450; or permission of ARHU-School of Music department.

MUSC653 Jazz Improvisation I (3 Credits)

Study of improvisational techniques and historical styles of jazz, including study of jazz "language" through transcription and analysis of recorded solos, and the exploration of creative processes and philosophical concepts.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC653 or MUSC699Z.

Formerly: MUSC699Z.

MUSC654 Jazz Improvisation II (3 Credits)

Continuation of MUSC653, study of jazz improvisation techniques through analysis, transcription and composition.

Prerequisite: MUSC653.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC654 or MUSC699Z.

Formerly: MUSC699Z.

MUSC655 Theory of Jazz (3 Credits)

Analysis of jazz harmony, with emphasis on principles of substitution, reharmonization, and syntax. Topics may also include chord/scale relationships, phrasing, articulation, notation and orchestration.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC655 or MUSC699J.

Formerly: MUSC699J.

MUSC656 Jazz Arranging (3 Credits)

Comprehensive approach to jazz arranging, including chord scale theory, voicing techniques, part and score layout, and formal construction of an arrangement.

Prerequisite: MUSC655.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC656 or MUSC699N.

Formerly: MUSC699N.

MUSC658 Seminar in Advanced Analysis (3 Credits)

Individual analytical projects including computer music, non-western music and advanced Schenkerian analysis. Readings regarding form, structure and analytical methods.

Prerequisite: MUSC651, MUSC451, and MUSC471; or permission of ARHU-School of Music department.

Repeatable to: 6 credits if content differs.

MUSC659 Seminar in Repertoire and Pedagogy (2-3 Credits)

Analysis and preparation of choral master works from all major style periods for the purpose of successful rehearsal and performance by conductors.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC659 or MUSC699R.

Formerly: MUSC699R.

MUSC660 String Pedagogy (3 Credits)

A study of major string pedagogical treatises, and an evaluation of string pedagogical techniques, materials, and procedures.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC400S or MUSC660.

MUSC661 Theory and Analysis of Atonal and Twelve-Tone Music (3 Credits)

An introduction to the advanced theoretical literature in atonal and twelve-tone music with an emphasis on analytical applications to music by prominent 20th-century composers.

Prerequisite: MUSC450; or permission of ARHU-School of Music department. Jointly offered with MUSC461.

Credit Only Granted for: MUSC461 or MUSC661.

MUSC665 Theory in Analysis (3 Credits)

An advanced study of the philosophy, practice, and aesthetics of music analysis in contemporary music theory. Readings drawn from the theoretic literature from 1960 to the present emphasize standards for discourse, the objects of music analysis, rationales for interpretation, and the role that theories of musical structure play in analytic practice.

Prerequisite: MUSC445; or permission of ARHU-School of Music department.

Restriction: Must not have completed MUSC465.

Credit Only Granted for: MUSC465, MUSC665, or MUSC699T.

Formerly: MUSC699T.

MUSC669 Orchestral Excerpts for String Players (1 Credit)

In-depth study of the orchestral excerpts required for professional orchestra auditions.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 6 credits.

Credit Only Granted for: MUSC669, MUSC699B, MUSC699L, MUSC699Q, or MUSC699X.

Formerly: MUSC699B, MUSC699L, MUSC699Q, and MUSC699X.

MUSC670 Advanced Analytical Techniques I (3 Credits)

Analysis of representative masterpieces of the eighteenth and early nineteenth centuries.

Prerequisite: MUSC451; or permission of ARHU-School of Music department.

MUSC671 Advanced Analytical Techniques II (3 Credits)

Analysis of representative masterpieces of the nineteenth and early twentieth centuries.

Prerequisite: MUSC451; or permission of ARHU-School of Music department.

MUSC672 Masterworks of the 20th Century: 1900-1950 (3 Credits)

A comprehensive survey of Western Art-Music of the first half of the 20th Century with a more intensive study and analysis of composers who have had a profound influence in the development of compositional practice in the modern era.

Restriction: Permission of ARHU-School of Music department; and must not have completed MUSC470.

Credit Only Granted for: MUSC448M, MUSC470, MUSC672, or MUSC699M.

Formerly: MUSC699M.

MUSC673 Style Analysis (3 Credits)

An analytical study of musical style from the Middle Ages to present through analysis of selected compositions. The principle genres and composers of Medieval, Renaissance, Baroque, Classical, Romantic and 20th century music will be covered.

Prerequisite: MUSC251; and permission of ARHU-School of Music department.

Restriction: Must not have completed MUSC448.

Credit Only Granted for: MUSC673, MUSC448F, or MUSC699F.

Formerly: MUSC699F.

MUSC674 Critical Concepts in Music Theory (3 Credits)

This seminar excavates and rebuilds some foundational concepts in music theory from a research perspective. Over the course of the term we will probe, problematize, enrich, and reconstruct our understanding of critical concepts such as pitch, timbre, texture, interval, scale, tonic, key, harmonic function, music analysis, meter, cadence, phrase, and form as these are deconstructed and recreated at a research level by contemporary music theorists. This advanced readings course is designed for the inquisitive student who is prepared to engage in sustained, thoughtful, and lively discussion of ideas often presumed as basic knowledge.

Restriction: Permission of the School of Music; and permission of instructor.

Credit Only Granted for: MUSC674 or MUSC699T.

Formerly: MUSC699T.

MUSC675 Music Theory Pedagogy (3 Credits)

Analysis of introductory level music theory courses, evaluation of text materials, and teaching approaches for music fundamentals, aural training, and basic undergraduate theory programs.

MUSC676 Historical Theory and Method in Ethnomusicology (3 Credits)

Reading and discussion of major works in ethnomusicology, with emphasis on schools of thought, convergence with and divergence from musicology and systematic musicology; close examination of trends in methodology and theory from the mid-eighteenth century until approximately thirty years before the present.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUET675 or MUSC676.

Formerly: MUET675.

MUSC677 Introduction to Ethnomusicology (3 Credits)

An introduction to the field of ethnomusicology: its origins as comparative musicology, its establishment as an autonomous discipline, and its contemporary trajectories.

Restriction: Permission of ARHU-School of Music department.

MUSC678 Seminar in Musical Composition (3 Credits)

An advanced course in musical composition. May be repeated for credit.

MUSC679 Seminar in Ethnomusicology (3 Credits)

Seminar topics address current issues, including gender, the social economy of music, ethnography of performance, etc.

Repeatable to: 9 credits if content differs.

Formerly: MUET679.

MUSC680 Seminar in Music of Antiquity and the Middle Ages (3 Credits)

Research topics in music from antiquity to 1450.

MUSC682 Seminar in Music of the Baroque Era (3 Credits)

Seminar in music of the Baroque era. Research topics in music from 1600 to 1750.

MUSC683 Seminar in Music of the Classic Era (3 Credits)

Seminar in music of the Classic era. Research topics in music from 1750 to 1820.

MUSC684 Seminar in Music of the Romantic Era (3 Credits)

Seminar in music of the Romantic era. Research topics in music from 1820 to 1900.

MUSC685 Seminar in Music of the 20th Century (3 Credits)

Seminar in music of the twentieth century. Research topics in music from 1900 to the present.

MUSC688 Advanced Orchestration (3 Credits)

Orchestration projects in the styles of Debussy, Ravel, Stravinsky, Schoenberg, Bartok, and others.

Prerequisite: MUSC487; or students who have taken courses with comparable content may contact the department.

Additional Information: May be repeated once for credit.

MUSC689 Advanced Conducting (2 Credits)

A concentrated study of the conducting techniques involved in the repertoire of all historical periods.

Prerequisite: MUSC491; or students who have taken courses with comparable content may contact the department.

Additional Information: May be repeated for credit with permission of instructor.

MUSC698 Advanced Seminar in Ethnomusicology (3 Credits)

Advanced Seminar on topics that change every semester. Requires well-developed skills in musical and social analysis, mastery of theories and methods of ethnomusicology.

Prerequisite: Permission of ARHU-School of Music department.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: MUET689 or MUSC698.

Formerly: MUET689.

MUSC699 Selected Topics in Music (1-3 Credits)

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 6 credits if content differs.

MUSC757 Aural Skills for Conductors (1 Credit)

Advanced musicianship skills necessary for conductors.

Restriction: Permission of ARHU-School of Music department.

MUSC758 Advanced Aural Skills for Conductors (1 Credit)

Continuation of MUSC757, advanced aural skills necessary for conductors.

Prerequisite: MUSC757.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 4 credits.

MUSC799 Master's Thesis Research (1-6 Credits)**MUSC800 Advanced Seminar in Music Pedagogy (3 Credits)**

A detailed study of historical and contemporary methods of pedagogy, and analysis of pedagogical problems. Sectioning by instrument. Required of all candidates for the D.M.A. Degree in performance and literature.

Prerequisite: MUSC400; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

MUSC801 Advanced Seminar in Music Pedagogy (3 Credits)

A detailed study of historical and contemporary methods of pedagogy, and analysis of pedagogical problems. Sectioning by instrument. Required of all candidates for the D.M.A. Degree in performance and literature.

Prerequisite: MUSC400; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

MUSC802 Advanced Seminar in Music Pedagogy III (3 Credits)

A detailed study of historical and contemporary methods of pedagogy, and analysis of pedagogical problems. Sectioning by instrument.

Prerequisite: MUSC801.

Restriction: Permission of ARHU-School of Music department.

MUSC811 Doctoral Opera Techniques (2 Credits)

Techniques for opera performance: Improvisation; Acting I, Scene Study I; and Movement I. Practical application of styles, techniques to operat e repertoire, and methodology seminar.

Restriction: Permission of ARHU-School of Music department.

Credit Only Granted for: MUSC611 or MUSC811.

MUSC812 Doctoral Opera Techniques II (2 Credits)

Continuation of MUSC811. Techniques for opera performance: Scene Study II; Acting II; Movement II: Stage Combat I; and Mask; and methodology seminar.

Prerequisite: MUSC811; and permission of ARHU-School of Music department.

Credit Only Granted for: MUSC612 or MUSC812.

MUSC813 Doctoral Opera Techniques III (2 Credits)

Continuation of MUSC812. Techniques for opera performance: Scene Study III; Movement III; Acting III Shakespeare; Dance I; Stage Combat II; Stage Combat II; and methodology seminar.

Prerequisite: MUSC812; and permission of ARHU-School of Music department.

Credit Only Granted for: MUSC613 and MUSC813.

MUSC814 Doctoral Opera Techniques IV (2 Credits)

Continuation of MUSC813. Techniques for opera performance: Scene Study IV; Dance II; Movement IV; and methodology seminar.

Prerequisite: MUSC813; and permission of ARHU-School of Music department.

Credit Only Granted for: MUSC614 or MUSC814.

MUSC830 Doctoral Seminar in Music Literature (3 Credits)

An analytical survey of the literature of music: keyboard music; vocal music; string music; wind instrument music; required of all candidates for the D.M.A. Degree in literature-performance.

Prerequisite: Must have completed at least twelve hours in music history and literature.

MUSC831 Doctoral Seminar in Music Literature (3 Credits)

An analytical survey of the literature of music: keyboard music; vocal music; string music; wind instrument music. Required of all candidates for the D.M.A. Degree in literature-performance.

Prerequisite: MUSC830; or permission of ARHU-School of Music department.

MUSC832 Doctoral Seminar in Music Literature (3 Credits)

An analytical survey of the literature of music: keyboard music; vocal music; string music; wind instrument music.

Prerequisite: MUSC831.

Restriction: Permission of ARHU-School of Music department.

MUSC878 Advanced Composition (3 Credits)

Conference course in composition in the larger forms.

Prerequisite: MUSC678; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

Repeatable to: 99 credits.

MUSC898 Pre-Candidacy Research (1-8 Credits)**MUSC899 Doctoral Dissertation Research (1-8 Credits)**

MUSP - Music Performance

MUSP402 Music Performance (2 Credits)

Senior course, in the minor series.

MUSP403 Music Performance (2 Credits)

Senior course, in the minor series.

MUSP409 Music Performance (2-4 Credits)

Senior course in the principal series.

MUSP410 Music Performance (2-4 Credits)

Senior course in the principal series. Recital required.

MUSP419 Music Performance (2-4 Credits)

Senior course in the major series.

MUSP420 Senior Recital (4 Credits)

Senior course in the major series. Recital required.

MUSP609 Interpretation and Repertoire (2 Credits)

Restriction: Permission of ARHU-School of Music department; and must have graduate standing in performance in the principal series.

MUSP610 Graduate Music Performance (4 Credits)

Prerequisite: MUSP609.

Restriction: Permission of ARHU-School of Music department.

MUSP619 Interpretation and Repertoire (2-4 Credits)

Prerequisite: departmental audition and permission of Department Chairman. Repeatable to a maximum of 12 credits.

Restriction: Must complete a Departmental audition; and permission of ARHU-School of Music department.

MUSP620 Graduate Music Performance (4 Credits)

Prerequisite: MUSP 619 and permission of Department Chairman. Recital course in the major series.

Prerequisite: MUSP619.

Restriction: Permission of ARHU-School of Music department.

MUSP621 Interpretation, Repertoire, and Performance (2-4 Credits)

Private music instruction in preparation for public performance.

Prerequisite: MUSP619.

Corequisite: MUSC758.

Restriction: Permission of ARHU-School of Music department.

MUSP679 Practicum (1 Credit)

Private individual instruction on a secondary instrument.

Restriction: Permission of ARHU-School of Music department.

Repeatable to: 4 credits.

MUSP719 Interpretation and Repertoire (2-4 Credits)

Prerequisite: departmental audition, admission to doctoral program in the major series and permission of department chairman. Repeatable to a maximum of 12 credits.

Restriction: Must complete a Departmental audition; and must be in the doctoral program in the major series; and permission of ARHU-School of Music department.

MUSP815 Interpretation, Performance, and Pedagogy (4 Credits)

A seminar in pedagogy and the pedagogical literature for the doctoral performer, with advanced instruction at the instrument, covering appropriate compositions. Required of all candidates for the D.M.A. Degree in literature-performance. **Prerequisite:** doctoral standing in performance and permission of department chairman. Recital course.

Restriction: Must have Doctoral standing in performance; and permission of ARHU-School of Music department.

MUSP816 Interpretation, Performance, and Pedagogy (4 Credits)

Recital course. **Prerequisite:** MUSP 815 and permission of Department Chairman.

Prerequisite: MUSP815.

Restriction: Permission of ARHU-School of Music department.

MUSP817 Interpretation, Performance, and Pedagogy (4 Credits)

Recital course. **Prerequisite:** MUSP 816 and permission of Department Chairman.

Prerequisite: MUSP816.

Restriction: Permission of ARHU-School of Music department.

MUSP898 Pre-Candidacy Research (1-8 Credits)**MUSP899 Doctoral Dissertation Research (1-8 Credits)**

NACS - Neuroscience & Cognitive Science

NACS600 Ethics in Scientific Research (2 Credits)

Issues of scientific integrity with emphasis on investigators in the laboratory sciences, including mentoring, scientific record keeping, authorship and peer review, ownership of data, use of animals and humans in research, and conflict of interest.

Prerequisite: Must have completed a year of graduate study.

Restriction: Permission of instructor; and must be in Neurosciences and Cognitive Sciences (Doctoral) program.

Credit Only Granted for: NACS600, PSYC788B, or BIOL600.

NACS608 Neuroscience and Cognitive Science Seminar (1 Credit)

Special seminar topics in Neuroscience and Cognitive Science.

Restriction: Permission of instructor.

Repeatable to: 8 credits if content differs.

NACS640 Foundational Readings Seminar (2 Credits)

An introduction to the breadth of research in Neuroscience and Cognitive Science. Faculty will present papers to provide historical context and introduction to important issues in the fields of their research.

Restriction: Permission of instructor; and must be in Neurosciences and Cognitive Sciences (Doctoral) program.

Credit Only Granted for: NACS640 or NACS728R.

Formerly: NACS728R.

NACS641 Introduction to Neurosciences (4 Credits)

Detailed examination of neurophysiology and sensorimotor systems.

Restriction: Permission of instructor.

NACS642 Cognitive Neuroscience (4 Credits)

A study of the fundamental concepts and techniques of cognitive neuroscience. Hands-on experience with three critically different cognitive neuroscience methods: EEG, MEG, and fMRI.

NACS643 Computational Neuroscience (4 Credits)

Provides a mathematical foundation in computational neuroscience.

Prerequisite: NACS641; and must have completed a course in calculus; and permission of instructor.

NACS644 Cellular and Molecular Neuroscience (4 Credits)

Overview of insights into the molecular mechanisms underlying the structure and function of the nervous system.

Prerequisite: NACS641; or permission of instructor.

NACS645 Cognitive Science (4 Credits)

A study of mental representations and computations. Issues examined include computation, representations, decisions, modularity, evolution, innateness, and reductionism.

Credit Only Granted for: NACS645 or NACS728Y.

Formerly: NACS728Y.

NACS728 Selected Topics in Neuroscience and Cognitive Science (2-4 Credits)

Graduate seminar on selected topics in contemporary neuroscience and Cognitive science. Extensive readings from the primary literature. Topics vary by semester.

Restriction: Permission of BSOS-Dean-Neuroscience and Cognitive Science.

Repeatable to: 15 credits if content differs.

NACS798 Master's Non-Thesis Research (1-3 Credits)

Individual research course for NACS non-thesis MS degree

Restriction: Must be in Neurosciences and Cognitive Sciences (Doctoral) program.

Repeatable to: 6 credits.

NACS799 Master's Thesis Research (1-3 Credits)

Individualized research course for NACS thesis MS degree

Restriction: Must be in Neurosciences and Cognitive Sciences (Doctoral) program.

Repeatable to: 6 credits.

NACS898 Pre-Candidacy Research (1-8 Credits)**NACS899 Doctoral Dissertation Research (1-8 Credits)**

Individual instruction course: contact department or instructor to obtain section number

Restriction: Must be in Neurosciences and Cognitive Sciences (Doctoral) program.

NAVY - Navy

NAVY400 Naval Operations and Seamanship (3 Credits)

Capstone course for senior NROTC Navy-option midshipmen in advanced navigation, communications, naval operations, and naval warfare.

Students learn through simulation in a computer classroom known as the Maritime Skills Simulator (MSS), in addition to lectures, discussions, and qualitative and quantitative tests/examinations. Students will engage in discussions regarding the moral and ethical responsibilities or military leaders, as well as the essential attributes of character required for effective leadership.

Recommended: NAVY201.

Restriction: Permission of UGST-Navy ROTC.

Additional Information: Priority enrollment will be given to students enrolled in the NROTC program.

NAVY401 Leadership and Ethics (3 Credits)

Integrates an intellectual exploration of Western moral traditions and ethical philosophy with military leadership, core values, the Uniform Code of Military Justice, and Navy regulations. The course provides students with a basic understanding of major moral traditions including Relativism, Utilitarianism, Kantian Ethics, Natural Law Theory, Divine Command Theory, and Virtue Ethics.

Recommended: NAVY200.

Restriction: Permission of UGST-Navy ROTC.

Additional Information: Priority enrollment will be given to students enrolled in the NROTC program.

NAVY402 Fundamentals of Maneuver Warfare (3 Credits)

A detailed study of the characteristics of modern warfare and their interactions with maneuver warfare doctrine, with a focus on the United States Marine Corps. Throughout the course, there is a strong focus on leadership, as the fundamental purpose of this course is to develop the skills, knowledge, leadership background and mentality necessary for a successful future leadership and service, whether in the military or the civilian sector.

Recommended: NAVY100, NAVY101, NAVY200, and NAVY108.

Restriction: Permission of UGST-Navy ROTC.

Additional Information: Priority in enrollment will be given to students in the NROTC program.

NFSC - Nutrition and Food Science

NFSC412 Food Processing Technology (4 Credits)

Provides in-depth study of the major industrial modes of food preservation. It integrates aspects of the biology, microbiology, biochemistry and engineering disciplines as they relate to food processing technology and food science.

Prerequisite: CHEM241, CHEM242, NFSC431, NFSC414, and NFSC434.

Corequisite: NFSC421 and NFSC423.

Recommended: MATH120; or completion of MATH220 recommended.

NFSC414 Mechanics of Food Processing (4 Credits)

Applications in the processing and preservation of foods, of power transmission, hydraulics, electricity, thermodynamics, refrigeration, instruments and controls, materials handling and time and motion analysis.

Prerequisite: PHYS121.

Credit Only Granted for: ENBE414 or NFSC414.

Formerly: ENBE414.

NFSC416 Food Safety System (2 Credits)

Focuses on identifying and reducing biological, chemical and physical risks in food manufacturing and thereby reduce outbreak incidences and improve public health. The course is based on the US FDA recognized curriculum on 'Hazard Analysis and Risk Based Preventive Controls' (HARPC) regulations for manufacturing human foods. A successful completion of this course will result in students becoming 'preventive controls qualified individuals' as defined by the US FDA.

Restriction: Permission of AGNR-Nutrition and Food Science department.

Repeatable to: 0 credit.

Credit Only Granted for: NFSC498T, NFSC416, NFSC679T, or NFSC616.

Formerly: NFSC498T.

NFSC420 Nutritional Biochemistry (4 Credits)

This is a comprehensive course that integrates aspects of biochemistry, nutrition, and molecular biology. This course deals with (1) structure and function of biochemical macromolecules including carbohydrates, proteins, lipids, and nucleic acids; (2) transcriptional and translational regulation focusing on how gene expression is controlled at the level of transcription and translation, particularly in response to nutritional factors; (3) nutritional principles covering impact of digestion and absorption; (4) biochemical metabolism on emphasis of how the body processes nutrients and how metabolic pathways are regulated.

Prerequisite: NFSC315 and BCHM461.

NFSC421 Food Chemistry (3 Credits)

Basic chemical and physical concepts are applied to the composition and properties of foods. Emphasis on the relationship of processing technology to the keeping quality, nutritional value, and acceptability of foods.

Prerequisite: BCHM461.

NFSC422 Food Product Research and Development (3 Credits)

A capstone course for FDSC majors. A study of the research and development of new food products. Application of food technology, engineering, safety and packaging are integrated by teams of students to develop a new food product from concept to pilot plant scale-up. Students will travel to nearby food processing plants on two to four Saturdays during the semester.

Restriction: Senior standing; and must be in a major within AGNR-Nutrition and Food Science department; and permission of AGNR-Nutrition and Food Science department.

Formerly: FDSC422.

NFSC423 Food Chemistry Laboratory (3 Credits)

Analysis of the major and minor constituents of food using chemical, physical and instrumental methods in concordance with current food industry and regulatory practices. Laboratory exercises coincide with lecture subjects in NFSC421.

Prerequisite: Must have completed or be concurrently enrolled in NFSC421.

NFSC425 International Nutrition (3 Credits)

Nutritional status of world population; consequences of malnutrition on health and mental development; and local, national, and international programs for nutritional improvement.

Prerequisite: Must have completed one course in basic nutrition.

NFSC426 Current Topics in Nutrition and Chronic Disease (3 Credits)

Analysis of current topics related to diet, nutrition, and human health at cellular, molecular and biochemical level. Further, this course will provide overview of the current methods, and in vitro and in vivo model systems used in nutrition research. Syllabus includes topics relevant to dietary regulation of genes/proteins and their impact on both physiological and pathological conditions including hyperlipidemia, hyperglycemia, fibrosis, food allergy, nutraceuticals, inflammatory diseases (IBD), cardiovascular diseases (atherosclerosis and stenosis), and oncogenesis. This course is designed to help students to understand and apply current scientific concepts and research methods, and to obtain necessary skills in evaluation and interpretation of evidence based scientific data.

Jointly offered with: NFSC621.

Credit Only Granted for: NFSC498F, NFSC426, NFSC678F, or NFSC621.

Formerly: NFSC498F.

NFSC427 Current Topics on Diet, Gut Microbiota Health and Metabolic Disease (3 Credits)

A review of current science linking the gut microbiota/microbiome with general and public health. It covers the composition of a healthy gut microbiota, its acquisition, how it is studied and analyzed; Gut microbiota changes with diet, specific foods, immigration and globalization and exercise; Its links to obesity, liver disease, insulin resistance and diabetes and cardiovascular disease; Links to the immune system; Targeting the gut microbiota composition and function to protect against or treat metabolic diseases. This course will be of use to public health and health care professionals, Food and/or Nutrition scientists, Dieticians, and those generally interested in understanding the health relevance of news reports or scientific reports on the microbiome.

Recommended: BCHM461.

Jointly offered with: NFSC627.

Credit Only Granted for: NFSC678K, NFSC498K, NFSC427, or NFSC627.

Formerly: NFSC498K.

NFSC430 Food Microbiology (3 Credits)

A study of microorganisms of major importance to the food industry with emphasis on food-borne outbreaks, public health significance, bioprocessing of foods, disease control, and the microbial spoilage of foods.

Prerequisite: BSCI223; or permission of instructor.

Credit Only Granted for: ANSC430 or NFSC430.

Formerly: FDSC430.

NFSC431 Food Quality Control (4 Credits)

Definition and organization of the quality control function in the food industry; preparation of specifications; statistical methods for acceptance sampling; in-plant and processed product inspection. Instrumental and sensory methods for evaluating sensory quality, identity and wholesomeness and their integration into grades and standards of quality. Statistical Process Control (SPC).

NFSC434 Food Microbiology Laboratory (3 Credits)

A study of techniques and procedures used in the microbiological examination of foods.

Prerequisite: Must have completed or be concurrently enrolled in NFSC430.

Credit Only Granted for: NFSC434 or ANSC434.

Formerly: FDSC434.

NFSC436 Diet and Optimal Human Health (3 Credits)

Focuses on maintaining optimal health and preventing diseases in humans with attention to diet. Reviews the main causes (nutritional/behavioral/lifestyle/ environmental/genetic factors) of diseases and nutrient needs, sources, functions and interactions, and deals with the benefits of healthy diets and nutraceutical/pharmaceutical option on human health. The emphasis will be on developing conceptual knowledge, critical thinking and problem solving skills and the application of nutrition in the health promotion.

Prerequisite: NFSC100, BSCI170, and BSCI171 .

Jointly offered with: NFSC636.

Credit Only Granted for: NFSC498L, NFSC678L, NFSC436, or NFSC636.

Formerly: NFSC498L.

NFSC440 Advanced Human Nutrition (4 Credits)

A critical study of physiologic, molecular and metabolic influences on utilization of carbohydrates, lipids, proteins, vitamins, macro-and micro-minerals, and nonnutritive components of food. Interactions of these nutrients and food components will be examined relative to maintaining health.

Prerequisite: Minimum of C- in NFSC100, BCHM462 and BSCI440.

NFSC450 Food and Nutrient Analysis (3 Credits)

Methods and practices of the analysis of foods and nutrients. An overview of the principles and basic mechanisms used in many of the analytical procedures commonly used in food and nutrition research. Emphasis will be placed on hands-on development of skills necessary to complete each analytical procedure; and on the accurate and concise description of the methodology and results from their application and on the regulations governing food analysis for nutritional labeling.

Prerequisite: BCHM461 and NFSC100.

Formerly: NUTR450.

NFSC455 Medical Nutrition Therapy I (4 Credits)

Advanced clinical nutrition course for dietetics or nutrition science majors. Modifications of the normal adequate diet to meet human nutritional needs in acute and chronic diseases and metabolic disorders. Includes energy balance and weight management, nutritional genomics, nutrition counseling, autoimmune disease, nutrition for pediatric conditions.

Prerequisite: NFSC380.

Corequisite: NFSC440.

NFSC456 Medical Nutrition Therapy II (4 Credits)

Modifications of the normal adequate diet to meet human nutritional needs in acute and chronic diseases and metabolic disorders.

Prerequisite: Minimum of C- in NFSC380 and NFSC440; and permission of AGNR-Nutrition and Food Science department.

NFSC470 Community Nutrition (3 Credits)

Perspectives underlying the practice of nutrition services in community settings. Assessment of needs, program planning and evaluation.

Programs and strategies to meet nutrition needs outside the acute care setting, such as nutrition education and food assistance. National nutrition policy and federal initiatives in nutrition will be examined.

Students will be required to travel to local community nutrition sites during the semester.

Prerequisite: Minimum of C- in NFSC315.

NFSC490 Special Problems in Nutrition (2-3 Credits)

Individually selected problems in the area of human nutrition.

Prerequisite: NFSC440; and permission of AGNR-Nutrition and Food Science department.

NFSC491 Professional Issues and Opportunities in Dietetics (3 Credits)

A capstone course for dietetics majors. Students will integrate knowledge and theory of nutrition, food, management, psychology, and social behaviors necessary to support quality dietetic practice. Working in teams, students will participate in case studies, simulated situations and community projects. Individuals and groups will present cases as well as papers on published research.

Prerequisite: Minimum of C- in NFSC350 and permission of Nutrition and Food Science Dietetics program.

Corequisite: NFSC456.

Restriction: Senior standing or higher; and must be in Nutrition and Food Science: Dietetics program.

NFSC498 Selected Topics (1-3 Credits)

Selected current aspects of food.

Restriction: Permission of AGNR-Nutrition and Food Science department.

Repeatable to: 6 credits if content differs.

NFSC605 Food-Related Behavior of the Individual (3 Credits)

Examination of the factors that influence food-related behavior and of the research methods used.

Restriction: Permission of AGNR-Nutrition and Food Science department.

Formerly: FOOD670.

NFSC611 Molecular Nutrition: Genomic, Metabolic, and Health Aspects (2 Credits)

The emerging discipline of molecular nutrition encompasses nutritional biochemistry, nutritional genomics, nutritional metabolomics, and epigenetics. It focuses on the effects of diet and nutrients on an individual's genome and metabolism, and how the molecular events affect human health. This is a co-taught course together with National Taiwan University via videoconferencing.

Recommended: BCHM461, NFSC440, or BCHM463.

NFSC612 Advanced Food Processing Technology (4 Credits)

Food Processing covers background of food processing and maintenance of nutritive quality. Lecture classes dealing with the principles of science and engineering rationale of various food additives and processing systems and their unit operations. Chemical, physical, and microbiological characteristics of the products will be discussed in relationship to processing variables. Methods of quality control, assurance of product standards, calculation of process variables, including ingredient formulation, formula adjustments, and product yield will be covered. Concluding lectures will cover management approaches to assuring efficiency of energy usage, quality maintenance, and product safety in the processing, distribution, and marketing of food products.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: NFSC679F or NFSC612.

Formerly: NFSC679F.

NFSC620 Diet and Cancer Prevention (3 Credits)

1. The nature of cancer and the relationship between dietary/nutritional factors and incidence of cancer 2. Basic concepts of general cancer biology with focus on effects of dietary components on genes and their encoded proteins, epigenetic changes and cell signaling 3. Effect of dietary factors in various types of cancer with respect to the benefit of intervention strategies for chemoprevention 4. Scientific knowledge, critical thinking, and the practical application of diet in cancer prevention.

Prerequisite: NFSC440; or permission of instructor.

Credit Only Granted for: NFSC620 or NFSC679D.

Formerly: NFSC678D.

NFSC624 Advanced Research Design and Methods in Nutrition Education (3 Credits)

Health promotion and nutrition education are parts of behavioral and social science that can be used to promote health and prevent diet-related diseases. Their purpose is to positively influence the health-related behaviors of individuals, communities, surrounding environments, and policies. The major goals of this course are to help students understand fundamental behavioral and social models and theories used in the field of community nutrition and to address methodological issues in developing, implementing, and evaluating nutrition education programs.

Prerequisite: One statistics course; or permission by the instructor.

Credit Only Granted for: NFSC678V, NFSC498V, or NFSC624.

Formerly: NFSC678V.

NFSC627 Advanced Current Topics on Diet, Gut Microbiota Health and Metabolic Disease (3 Credits)

A review of current science on links between the gut microbiota and general and public health. It covers the composition of a healthy gut microbiota, its acquisition, how it is studied and analyzed; Gut microbiota changes with diet, specific foods, immigration and globalization and exercise; Its links to obesity, liver disease, insulin resistance and diabetes and cardiovascular disease; Links to the immune system; Targeting the gut microbiota in preventing and treating metabolic disease obesity and related diseases; How the gut microbiota changes with immigration and globalization. , This course will be of use to public health and health care professionals, Food and/or Nutrition scientists, Dieticians, and those generally interested in understanding the health relevance of news reports or scientific reports on the microbiome.

Recommended: BCHM461 .

Jointly offered with: NFSC427.

Credit Only Granted for: NFSC678K, NFSC498K, NFSC427, or NFSC627.

Formerly: NFSC678K.

NFSC630 Nutritional Aspects of Energy Balance (3 Credits)

The prevalence and basic causes of caloric imbalance, along with a wide variety of approaches to weight control.

Formerly: NUTR630.

NFSC631 Advanced Food Microbiology (3 Credits)

One lecture and one laboratory period a week. An in-depth understanding and working knowledge of a selected number of problem areas and contemporary topics in food microbiology.

Prerequisite: NFSC430.

Restriction: Permission of instructor.

NFSC633 Food Polymer Science (3 Credits)

Food polymers including protein and carbohydrate from food, and their chemical, physical, and functional properties together with their structure-function relationship will be discussed. Food polymer applications in food and non-food areas will be covered. Principles and applications of instrumental methods for polymer characterization will be introduced. An emphasis on nanotechnology and its application to design and characterization food polymers will be included.

Prerequisite: Permission of instructor.

Credit Only Granted for: NFSC633 or NFSC679P.

Formerly: NFSC679P.

NFSC636 Advanced Diet and Optimal Human Health (3 Credits)

Focuses on maintaining optimal health and preventing diseases in humans with attention to diet. Reviews main causes (nutritional/behavioral/lifestyle/ environmental/genetic factors) of diseases and nutrient needs, sources, functions and interactions, and deals with the benefits of healthy diet and nutraceutical/pharmaceutical option on human health. The emphasis will be on developing conceptual knowledge, critical thinking and problem solving skills and the application of nutrition in the health promotion.

Prerequisite: NFSC100, BSCI170, and BSCI171 .

Jointly offered with: NFSC436.

Credit Only Granted for: NFSC498L, NFSC678L, NFSC436, or NFSC636.

Formerly: NFSC678L.

NFSC650 Nutrition and Public Health (2 Credits)

Overview of the major policy debates involving nutrition and health in the U.S. Public Health System associated with nutrition, chronic disease and nutrition lifestyle stages will be discussed. The CDCynergy software program will facilitate the development of program design, implementation and evaluation skills.

Prerequisite: NFSC470.

Restriction: Permission of AGNR-Nutrition and Food Science department.

NFSC655 Nutrition, Food and Public Policy (3 Credits)

History and current status of legislation relative to nutrition and food. Focus on gaining insights and skills regarding working effectively in the area of nutrition and policy.

Formerly: NUTR655.

NFSC660 Research Methods (3 Credits)

A study of appropriate research methodology and theories including experimental design. Each student is required to develop a specimen research proposal.

Prerequisite: Must have completed one statistics course.

Formerly: NUTR 660.

NFSC678 Selected Topics in Nutrition (1-6 Credits)

Individual or group study in an area of nutrition.

Repeatable to: 6 credits.

Formerly: NUTR678.

NFSC679 Selected Topics in Food Science (1-6 Credits)

Individual or group study in an area of food science.

Repeatable to: 6 credits if content differs.

NFSC680 Human Nutritional Status (3 Credits)

Indirect and direct methods of appraisal of human nutritional status which include: dietary, anthropometric, clinical evaluations and biochemical measures.

Prerequisite: Must have complete coursework in advanced nutrition, biochemistry and physiology.

NFSC688 Seminar in Nutrition and Food Science (1-3 Credits)

This is a seminar course presented by NFSC graduate students and invited speakers in the field of nutrition and food science.

Restriction: Must be in a major within AGNR-Nutrition and Food Science department.

Repeatable to: 3 credits.

Formerly: NUTR688.

NFSC690 Nutrition and Aging (3 Credits)

Examine the physiological, social and psychological changes that may occur with aging and their impact on nutritional status and on successful aging.

Prerequisite: NFSC440 or BSCI440; or students who have taken courses with comparable content may contact the department.

NFSC698 Colloquium in Food Science (1 Credit)

Oral reports on special topics or recently published research in food science and technology. Distinguished scientists are invited as guest lecturers. A maximum of three credits allowed for the M.S.

Formerly: FDSC698.

NFSC699 Problems in Nutrition and Food Science (1-4 Credits)

Credit according to time scheduled and magnitude of problem. An experimental program on a topic other than the student's thesis problem will be conducted. Four credits shall be the maximum allowed toward an advanced degree.

Restriction: Permission of AGNR-Nutrition and Food Science department.

Formerly: FDSC 699 and NUTR 699.

NFSC735 Food Toxicology (3 Credits)

An introduction to basic concepts in toxicology in relation to toxic food contaminants and additives; both synthetic and naturally occurring. Focus on exposure routes, molecular targets and susceptible individuals. Also includes regulatory toxicology with respect food toxins.

Recommended: BCHM462, BSCI440, or CHEM131. Cross-listed with MIEH735.

Credit Only Granted for: MIEH735 or NFSC735.

NFSC799 Master's Thesis Research (1-6 Credits)

First and second semesters. Credit in proportion to work done and results accomplished. Investigation in some phases of foodservice administration which may form the basis of a thesis. results in the form of a thesis.

Formerly: FDSC 799, NUSC 799, and NUTR 799.

NFSC898 Pre-Candidacy Research (1-8 Credits)

First and second semesters. Oral reports on special topics or recently published research in nutrition. Distinguished scientists are invited as guest lecturers. A maximum of three credits allowed for the M.S.

Formerly: NUSC898.

NFSC899 Doctoral Dissertation Research (1-8 Credits)

Formerly: FDSC 899, NUSC 899, and NUTR 899.

PERS - Persian

PERS402 Persian Translation (3 Credits)

Focuses on hands-on practice of English/Persian and Persian/English translation as well as the problematic issues of translation. Taught in Persian.

Prerequisite: PERS302; or permission of ARHU-School of Languages, Literatures, and Cultures department.

PERS405 Media and the Current Issues in Iranian Society (6 Credits)

Develops Persian language proficiency and domain-specific knowledge at advanced-mid to advanced-high level on ACTFL scale. Enhances linguistic and cultural competence. Provides a broad understanding of some of the current social, political and economic issues in modern Iran. Taught in Persian.

Prerequisite: PERS306; or equivalent as determined by WLPT (World Language Placement Test).

PERS406 Practicum in Persian Translation (6 Credits)

Provides opportunities for translation, interpretation, and analysis of various authentic oral and written texts (both English to Persian and Persian to English). Facilitates the development of Persian language proficiency at advanced level through a task-based approach that integrates all the language skills in pedagogical translation activities.

Prerequisite: PERS306; or equivalent as determined by the WLPT (World Language Placement Test).

PERS498 Special Topics in Persian Studies (3 Credits)

Topic and language to be announced when offered.

Prerequisite: Permission of instructor.

Repeatable to: 9 credits if content differs.

PERS601 Modern Persian Literature (3 Credits)

Selected readings in Persian poetry, fiction and drama covering topics related to contemporary Iranian society and culture. In Persian.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

PERS662 Persian Sociolinguistics (3 Credits)

Study of impact of social and regional factors on spoken and written usage. In Persian.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

PERS689 Special Topics in Persian Studies (3 Credits)

In-depth analysis of a particular aspect of Persian studies. In Persian.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 12 credits if content differs.

PHIL - Philosophy

PHIL408 Topics in Contemporary Philosophy (3 Credits)

An intensive examination of contemporary problems and issues. Source material will be selected from recent books and articles.

Repeatable to: 99 credits if content differs.

PHIL409 Advanced Studies in Contemporary Philosophy (3 Credits)

An in-depth study of a contemporary philosophical problem or issue.

Topics will vary, but the course will encourage students to grapple with the primary literature in order to generate sustained critical analyses or proposed resolutions of issues under active consideration in contemporary philosophy.

Prerequisite: 6 credits in PHIL courses.

Repeatable to: 12 credits if content differs.

PHIL412 The Philosophy of Plato (3 Credits)

A critical study of selected dialogues.

Prerequisite: 6 credits in PHIL courses.

PHIL414 The Philosophy of Aristotle (3 Credits)

A critical study of selected portions of Aristotle's writings.

Prerequisite: 6 credits in PHIL courses.

PHIL417 The Golden Age of Jewish Philosophy (3 Credits)

Jewish philosophy from Maimonides in the 12th century to the expulsion of the Jews from Spain at the end of the 15th Century. Topics include the limitations of human knowledge, creation of the world, foreknowledge and free will, and the existence of God.

Prerequisite: 3 credits in PHIL courses; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies; or permission of ARHU-Philosophy department.

Cross-listed with: JWST452.

Credit Only Granted for: JWST452 or PHIL417.

PHIL418 Topics in Epistemology/Metaphysics (3 Credits)

An intensive examination of contemporary problems and issues in epistemology or metaphysics. Source material will be selected from recent books and articles.

Prerequisite: 2 courses in PHIL.

Repeatable to: 12 credits if content differs.

PHIL428 Topics in the History of Philosophy (3 Credits)

Prerequisite: PHIL310 and PHIL320; or permission of ARHU-Philosophy department.

Repeatable to: 99 credits if content differs.

PHIL438 Topics in Value Theory (3 Credits)

An intensive examination of contemporary problems and issues in ethics, aesthetics, political philosophy and related areas. Source material will be selected from recent books and articles.

Prerequisite: 2 courses in PHIL.

Repeatable to: 12 credits if content differs.

PHIL440 Contemporary Ethical Theory (3 Credits)

Contemporary work on fundamental problems in ethical theory, such as whether there are moral truths, whether and how our moral claims can be justified, what exactly makes an act right or wrong, the nature of moral language, and the role of reason and emotion in moral judgment.

Prerequisite: PHIL341; or permission of instructor.

PHIL443 Moral Psychology (3 Credits)

Philosophers often stress reasoning as the appropriate source for practical and moral action. Would a realistic view of human psychology undermine this assumption? This course will examine recent philosophical and empirical work on the relevance of emotion and/or intuition to rationality, moral worth, and moral judgment.

Prerequisite: 2 courses in PHIL.

Recommended: PHIL341 is strongly recommended for background on the historical authors that the readings make reference to.

Credit Only Granted for: PHIL408P or PHIL443.

Formerly: PHIL408P.

PHIL445 Contemporary Political Philosophy (3 Credits)

Major trends in contemporary political philosophy: liberal, libertarian, communitarian, socialist, feminist.

Restriction: Must have completed 3 credits in philosophy or political theory; or permission of ARHU-Philosophy department. And sophomore standing or higher.

PHIL446 Law, Morality, and War (3 Credits)

An exploration of fundamental moral and legal issues concerning war.

PHIL453 Philosophy of Science II (3 Credits)

A comprehensive survey of developments in the main problems of the philosophy of science from logical positivism to the present. The nature of theories, models, laws, and counterfactuals, testing, inductive logic, and confirmation theory, experimental methodology, measurement, explanation, concept formation, growth of scientific knowledge, and scientific realism.

Prerequisite: Students must have completed a minimum of two philosophy courses.

PHIL458 Topics in the Philosophy of Science (3 Credits)

A detailed examination of a particular topic or problem in philosophy of science.

Repeatable to: 6 credits if content differs.

PHIL469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

PHIL470 Logical Theory II: Incompleteness and Undecidability (3 Credits)

Introduces the formal theory of computation, and then presents the central limitative results of modern first-order logic: Church's undecidability theorem and Godel's first and second incompleteness theorems. The primary focus of the course is a thorough technical study of these fundamental results, but we will also discuss some of the philosophical issues they raise. Further topics may include second-order logic.

Prerequisite: PHIL370; or permission of instructor.

PHIL478 Topics in Philosophical Logic (3 Credits)

Philosophical logics result from the application of formal techniques to problems of philosophical interest; these logics often have applications in other areas as well, such as AI, linguistics, psychology, economics, and law. This course will either concentrate on a particular family of philosophical logics (such as modal or temporal or defeasible logics) or else survey a number of different logical systems.

Prerequisite: PHIL271; or permission of instructor.

Recommended: PHIL470.

Repeatable to: 9 credits if content differs.

PHIL488 Topics in Philosophy of Cognitive Studies (3 Credits)

Examination of a particular topic or problem in philosophy of cognitive studies.

Prerequisite: 3 credits in PHIL courses; or permission of ARHU-Philosophy department.

Repeatable to: 9 credits if content differs.

PHIL489 Undergraduate Seminar in Philosophy (3-6 Credits)

An intensive examination of a philosophical topic or topics.

Restriction: Permission of ARHU-Philosophy department.

Repeatable to: 6 credits if content differs.

PHIL490 The Practice of Philosophy: How To Develop Your Own Work (3 Credits)

Writing philosophical papers, presenting them to an audience, and responding critically and constructively to the papers and talks of others are skills central to the practice of philosophy. This course will help students to enhance those skills in a seminar-style format. Students should come to the course with a paper of their own (likely from another course) that they would like to develop.

Prerequisite: Three upper-level (300- or 400-level) courses in philosophy or permission of the instructor.

Credit Only Granted for: PHIL408R or PHIL490.

Formerly: PHIL408R.

PHIL498 Topical Investigations (1-3 Credits)**PHIL640 Value Theory (3 Credits)**

A basic course in value theory for beginning graduate students, covering a number of topics in depth, to provide a springboard for further study and research in the area.

PHIL660 Metaphysics, Mind, and Language (3 Credits)

A basic course on selected issues in metaphysics, philosophy of mind, and philosophy of language for beginning graduate students, covering a number of topics in depth, to provide a springboard for further study and research in the area.

PHIL688 Selected Problems in Philosophy (1-3 Credits)

Restriction: Permission of instructor.

PHIL788 Research in Philosophy (1-6 Credits)

Prerequisite: Permission of advisor or chair of tutorial-advisory committee required.

Repeatable to: 6 credits.

PHIL798 Master's Level Independent Study (1-3 Credits)

Master's level independent study.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

PHIL799 Master's Thesis Research (1-6 Credits)**PHIL808 Seminar in the Problems of Philosophy (3 Credits)**

Restriction: Permission of instructor.

PHIL828 Seminar in the History of Philosophy (3 Credits)

Restriction: Permission of instructor.

PHIL838 Seminar in Aesthetics (3 Credits)

Restriction: Permission of instructor.

PHIL848 Seminar in Ethics (3 Credits)

Restriction: Permission of instructor.

PHIL858 Seminar in Logic and Philosophy of Sciences (3 Credits)

Restriction: Permission of instructor.

PHIL859 Proseminar in the Philosophy of Science (3 Credits)

Seminar on the core areas of research in philosophy of science, with the focus on a theme currently generating attention in the field.

Restriction: Permission of instructor.

Repeatable to: 9 credits if content differs.

PHIL868 Seminar in Metaphysics (3 Credits)

Restriction: Permission of instructor.

PHIL869 Seminar in the Theory of Knowledge (3 Credits)

Restriction: Permission of instructor.

PHIL878 Seminar in Cognitive Studies (3-9 Credits)

Methodology and research in various disciplines involved in cognitive studies.

Restriction: Permission of ARHU-Philosophy department.

Repeatable to: 9 credits if content differs.

PHIL879 Seminar in Philosophy and Cognitive Studies (3 Credits)

Repeatable to: 9 credits if content differs.

PHIL888 Professional Mentoring for Doctoral Students (1-3 Credits)

Work with a faculty advisor on various aspects of professional development.

Restriction: Permission of ARHU-Philosophy department.

Repeatable to: 3 credits if content differs.

PHIL889 Pedagogical Mentoring for Doctoral Students (1-3 Credits)

Work with a faculty advisor to develop and improve pedagogical skills.

Restriction: Permission of ARHU-Philosophy department.

Repeatable to: 3 credits if content differs.

PHIL898 Pre-Candidacy Research (1-8 Credits)**PHIL899 Doctoral Dissertation Research (1-8 Credits)**

PHSC - Public Health Science

PHSC401 History of Public Health (3 Credits)

Emphasis is on the history of public health in the Western world from antiquity to the present. Also examines the influence of public health developments as they relate to the Western world as well as throughout diverse cultures and societies across the globe. Analysis focuses on the interaction among Western and non-Western cultures with respect to health issues, including science, policies, prevention and treatment.

Restriction: Must be in Public Health Science program; and must have earned a minimum of 45 credits.

Credit Only Granted for: PHSC401 or SPHL401.

Formerly: SPHL401.

PHSC402 Public Health Emergency Preparedness (3 Credits)

Intensive introduction to public health emergency preparedness. Course will provide students with an overview of the role of public health in planning, prevention, preparedness, response, and recovery from disasters, both manmade and natural.

Restriction: Must be in Public Health Science program; and must have earned a minimum of 60 credits.

Credit Only Granted for: PHSC402 or SPHL402.

Formerly: SPHL402.

PHSC405 Policy Advocacy and Public Health (3 Credits)

Students will identify and analyze policy solutions to public health problems and determine advocacy strategies to encourage policy makers to implement the recommendations. Lectures, class discussions, group work and mock advocacy exercises will integrate the principles and practice of public health advocacy. Guest lecturers from a variety of settings will give students a broad range of perspectives and advocacy experiences.

Prerequisite: Minimum grade of C- in HLSA300.

Restriction: Must be in Public Health Science program; and must have earned a minimum of 60 credits.

PHSC410 Public Health Program Planning and Evaluation (3 Credits)

Students will become familiar with the dynamics of public health program planning, and the basic process of identifying unmet needs. They will be able to identify different types of program evaluation, including needs assessment, formative research, process evaluation, impact assessment, and cost analysis.

Restriction: Must be in Public Health Science program; and junior standing or higher.

Credit Only Granted for: PHSC410 or SPHL410.

Formerly: SPHL410.

PHSC412 Food, Policy, and Public Health (3 Credits)

Broad overview of the impact of food and food policy on public health.

Course covers topics such as access to food, food systems, influence of food policies on the individual, the cost of food, influences on food selection, food safety risks and responses, nutrition-related health challenges, and a comparison of US food/nutrition issues with those of other nations.

Prerequisite: Must have completed HLSA300 with a C- or higher.

Recommended: NFSC100.

Restriction: Must be in Public Health Science program; and junior standing or higher.

Credit Only Granted for: PHSC412 or SPHL412.

Formerly: SPHL412.

PHSC415 Essentials of Public Health Biology: The Cell, The Individual, and Disease (3 Credits)

Presents the basic scientific and biomedical concepts of modern public health problems and explores in depth mechanisms and models of the major categories of disease. The biologic principles presented are foundations to public health disease prevention, control, or management programs.

Prerequisite: Minimum grade of C- in BSCI202.

Recommended: BSCI223.

Restriction: Must be in Public Health Science program; and junior standing or higher.

Credit Only Granted for: PHSC415, SPHL415 or SPHL498J.

Formerly: SPHL415 and SPHL498J.

PHSC420 Vaccines and Immunology (3 Credits)

An exploration of immunology and vaccines through a public health lens. We will examine the cells, systems, and molecules that comprise the human immune system and defend your body against disease. In addition, we will discuss the strategies used during vaccine development including the history and future of vaccination and how increased understanding of the immune system has allowed scientists to improve and refine the process. Finally we will examine the current social and political situation surrounding vaccination and the roles and responsibility of public health practitioners.

Prerequisite: Minimum grade of C- in BSCI202.

Recommended: CHEM231.

Restriction: Must have earned a minimum of 60 credits. And must be in Public Health Science program; or permission of instructor.

PHSC425 Genetics, Genomics, and Public Health (3 Credits)

Recent advances in genomic science and biomedical technologies have increased our understanding of the genetic basis of disease and the interplay between genetics and environmental and behavioral factors. This course will provide a solid background in basic genetics and genomic science and highlight the role of public health professionals in translating breakthroughs in this rapidly transforming field into the clinical setting, program planning, and policy. Topics covered will include the molecular basis for genetic variation, fetal and newborn screening, genetic risk factors for cancer, pharmacogenetics, the role of pathogen genomics in outbreak investigation, and applications of genetic engineering in solving public health issues.

Prerequisite: Must have completed BSCI170 and 171 with a C- or higher.

Recommended: BSCI222 and BSCI223.

Restriction: Must have earned a minimum of 60 credits; and must be in Public Health Science program.

Credit Only Granted for: SPHL498X OR PHSC425.

Formerly: SPHL498X.

PHSC426 Climate Change and Health (3 Credits)

Climate changes pose significant risks to population health by affecting air quality, the availability of safe drinking water, infectious disease transmission, food security, and access to housing, land, and livelihoods. Students examine the relationship between climate change and human health, focusing on how climate change vulnerability varies between populations by geographic, demographic, and socioeconomic characteristics.

Prerequisite: Minimum grade of C- in MIEH300.

Restriction: Must be in Public Health Science program.

PHSC430 Public Health in the City: Perspectives on Health in the Urban Environment (3 Credits)

Exposure to issues related to city habitation and the health of the public, including how the urban environment impacts the lives and health of city dwellers, including discussion of the social determinants of health. Students are encouraged to think about urban health and policy, and to question the current state of urban public health. Issues of race, class, and equality will be discussed throughout the course as they relate to each of these topics.

Prerequisite: Minimum grade of C- in BSCI202 and MIEH300.

Restriction: Must be in Public Health Science program; and junior standing or higher.

Credit Only Granted for: PHSC430 or SPHL498G.

Formerly: SPHL498G.

PHSC440 Public Health Nutrition (3 Credits)

Engages students in conceptual thinking about the relationship between public health and nutritional health. Students will analyze and interpret "A Framework for Public Health Nutrition." Students will identify determinants of nutritional health, assess nutritional health in individuals and populations, develop strategies to mitigate these issues, and analyze and evaluate public health nutrition policies.

Prerequisite: A minimum of C- in BSCI170, BSCI171, CHEM131, CHEM132 and EPIB301.

Restriction: Must be in Public Health Science program.

Credit Only Granted for: PHSC440 or NFSC498L.

PHSC450 Addressing Social and Structural Inequities Through Public Health (3 Credits)

A focus on addressing social and structural inequities within race, gender, disability, and class through various perspectives in the field of public health. Students explore the causes, challenges, consequences, and extent these injustices have on health disparities from local, national, and global perspectives. Students view these inequities through the lens of the affected populations, and work interactively and collaboratively to interpret, design, and evaluate public health interventions and approaches to address key health disparities within specific communities. The aim of this course is to help students define appropriate research and address structural inequities with innovative approaches through the professional practice of public health.

Prerequisite: Minimum grade of C- in MIEH300; and 1 course with a minimum grade of C- from either SPHL100 or PHSC300.

PHSC497 Public Health Science Capstone (3 Credits)

The capstone course is the culminating experience for Public Health Science students and must be taken only in the final semester of study. The Public Health Science capstone course is designed to challenge students to integrate the five core areas of public health in investigating, researching and addressing public health issues. Throughout the semester, students will be required to evaluate, analyze and synthesize scholarly works as they research and propose solutions to a variety of public health issues. By the conclusion of this research based course, students will understand how the various public health perspectives can combine in addressing and informing public health practices.

Prerequisite: Must have completed the professional writing requirement with a C- or higher; and minimum grade of C- in PHSC450.

Restriction: Must have earned a minimum of 100 credits; and must be in Public Health Science program; and must be in the final semester of undergraduate study.

Credit Only Granted for: SPHL498F or PHSC497.

Formerly: SPHL498F.

PHYS - Physics

PHYS401 Quantum Physics I (4 Credits)

Introduces some quantum phenomena leading to wave-particle duality. Schroedinger theory for bound states and scattering in one dimension. One-particle Schroedinger equation and the hydrogen atom.

Prerequisite: PHYS371; and (PHYS313 or PHYS373).

PHYS402 Quantum Physics II (3 Credits)

Applications of quantum mechanics to atomic, molecular, and solid state systems. Addition of angular momenta, multiparticle states, perturbation theory and other approximation techniques, scattering, and symmetries.

Prerequisite: PHYS401.

PHYS404 Introduction to Statistical Thermodynamics (3 Credits)

Introduction to basic concepts in thermodynamics and statistical mechanics.

Prerequisite: PHYS371 or PHYS420.

PHYS405 Advanced Experiments (3 Credits)

Advanced laboratory techniques. Selected experiments from many fields of modern physics. Emphasis on self-study of the phenomena, data analysis, and presentation in report form.

Prerequisite: PHYS375.

Restriction: Must be in a major within CMNS-Physics department.

PHYS407 Undergraduate Experimental Research (3 Credits)

Students develop and complete an independent, experimental research project with a professor in the Physics Department. The project should be a continuation of work done in PHYS499A. To obtain permission, students must submit a proposal describing the experimental work to be completed and this proposal must be approved by their faculty mentor, the associate chair for undergraduate education and the chair of the laboratory committee. Students must maintain a lab notebook, give an oral presentation and complete a written report on their research that includes data and error analysis.

Prerequisite: PHYS499 and PHYS375; and permission of CMNS-Physics department.

Restriction: Must be in a major within CMNS-Physics department; and senior standing.

PHYS410 Classical Mechanics (3 Credits)

Theoretical foundations of mechanics with extensive application of the methods. Various mathematical tools of theoretical physics.

Prerequisite: PHYS265 and PHYS273; and (MATH243 or MATH246).

PHYS411 Intermediate Electricity and Magnetism (4 Credits)

Foundations of electromagnetic theory, with extensive applications of the methods. Thorough treatment of wave properties of solutions of Maxwell's equations.

Prerequisite: PHYS313 or PHYS373.

PHYS412 Intermediate Electricity and Magnetism I (4 Credits)

The first semester of a two semester course with emphasis on electrostatics and magnetostatics, boundary value problems, fields in matter, electrodynamics, and Maxwell's equations.

Prerequisite: PHYS373.

PHYS413 Electricity and Magnetism II (3 Credits)

The second semester of a two semester course with emphasis on electromagnetic waves, potentials and gauge invariance, and relativistic electrodynamics

Prerequisite: PHYS313 or PHYS412.

Credit Only Granted for: PHYS411 or PHYS413.

PHYS420 Principles of Modern Physics (3 Credits)

A survey of atomic and nuclear phenomena and the main trends in modern physics. Appropriate for students in engineering and other physical sciences.

Prerequisite: MATH246. And PHYS271 and PHYS270; or PHYS273.

Credit Only Granted for: PHYS371 or PHYS420.

PHYS428 Physics Capstone Research (2-4 Credits)

Individual, focused research under the guidance of a faculty member. Discussion, presentations and, if appropriate, research group projects involved. Student must submit final research paper for completion of course. Paper may also serve as thesis required for High Honors in Physics. Not intended as a general "reading course" (see PHYS499).

Restriction: Must be in a major within CMNS-Physics department; and senior standing or higher; and permission of instructor.

Repeatable to: 4 credits.

PHYS429 Atomic and Nuclear Physics Laboratory (3 Credits)

Classical experiments in atomic physics and more sophisticated experiments in current techniques in nuclear physics.

Prerequisite: PHYS405.

PHYS431 Introduction to Solid State Physics (3 Credits)

Classes of materials; introduction to basic ideal and real materials' behavior including mechanical, electrical, thermal, magnetic and optical responses of materials; importance of microstructure in behavior. One application of each property will be discussed in detail.

Prerequisite: PHYS271, PHYS270, and MATH241.

Cross-listed with: ENMA460.

Restriction: Junior standing or higher; and must be in the Engineering: Materials Science program or Physics program.

Credit Only Granted for: ENMA460 or PHYS431.

Additional Information: Materials Engineering students take ENMA460 and Physics students take PHYS431.

PHYS441 Topics in Nuclear and Particle Physics (3 Credits)

A survey of concepts in particle and nuclear physics, with a topical emphasis on the impact of the Weak Interaction and the discovery of Parity Violation.

Prerequisite: PHYS401 or PHYS402.

Corequisite: PHYS402.

PHYS444 Computing Beyond the Standard Model of Particle Physics (3 Credits)

An exploration of the computing languages and techniques used to analyze large data sets in Large Hadron Collider physics with some discussion of applications in unrelated fields.

Prerequisite: PHYS371 and PHYS373; or permission of instructor.

PHYS456 Making Physics Experiments (3 Credits)

Laboratory course emphasizing practical skills used for making Physics experiments within the broader context of the maker movement and the maker culture. Design, fabrication, hands-on skills, repair, and safety. Practical skills not otherwise covered in traditional coursework (e.g.: carpentry, electronics disassembly/assembly, soldering, etc.).

Prerequisite: PHYS276; or permission of instructor.

Restriction: Permission of Physics Department.

Credit Only Granted for: PHYS499X or PHYS456.

Formerly: PHYS499X.

PHYS457 Introduction to Quantum Computing (3 Credits)

An introduction to the concept of a quantum computer, including algorithms that outperform classical computation and methods for performing quantum computation reliably in the presence of noise. As this is a multidisciplinary subject, the course will cover basic concepts in theoretical computer science and physics in addition to introducing core quantum computing topics.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, PHYS274); and 1 course with a minimum grade of C- from (CMSC351, PHYS373).

Restriction: Permission of CMNS-Physics department; or permission of CMNS-Computer Science department. Cross-listed with CMSC457.

Credit Only Granted for: PHYS457 or CMSC457. Additional information: No previous background in quantum mechanics is required.

PHYS467 Introduction to Quantum Technology (3 Credits)

Investigates the basic concepts/building blocks of quantum computers, quantum key distribution, quantum networks, and quantum sensors.

Examines what is needed to form a working qubit and different hardware platforms that implement them (for example, trapped ions, superconducting microwave circuits, color centers, and neutral atoms.) Conceptual and computational familiarity with complex numbers, vector spaces, bases, matrices, eigenvectors, and eigenvalues will be assumed, as well as quantum states/wave functions, and quantum measurement. Familiarity with spin-1/2 systems, and Pauli matrices is highly recommended.

Prerequisite: MATH141 and MATH240 or equivalent; and one of the following: PHYS360, PHYS401, PHYS457, or ENEE491; or permission of instructor.

Cross-listed with: ENEE492.

Credit Only Granted for: PHYS467 or ENEE492.

PHYS474 Computational Physics (3 Credits)

Introduction to computational physics. Overview of some of the most widely used methods of computational physics and computational methods, including data analysis and statistical methods, visualization, numerical solutions of ordinary and partial differential equations (classical equations of motion, Poisson's equation, time independent and time dependent Schrodinger equations) and Monte Carlo simulations. In addition to giving the students a basic working knowledge of these particular techniques, the goal is to make them proficient in scientific computing and programming in general, so that they will be prepared to tackle other computational and data analysis problems that they may encounter in the future. This course will use the programming language Python.

Prerequisite: PHYS373; and (PHYS165, CMSC106, or CMSC131).

Recommended: PHYS401 (strongly recommended).

Additional Information: Students will need a laptop for this course to run specific software; however, arrangements will be made for those who need them. Students will need to load the Python 3 language on your computer, which will be done in the first week of class. The class will use the "Anaconda" environment/distribution, which is available for Mac/Windows/Linux. Contact the department for more information.

PHYS476 Introduction to Applied Machine Learning (3 Credits)

Introduces machine learning techniques that are becoming pertinent in the technology industry. Focus on hands-on work using popular high-level libraries. Students are expected to have a background in functional programming, linear algebra, calculus, and mathematical modeling.

Prerequisite: PHYS165, PHYS274, and PHYS276; or interested students with backgrounds in functional programming, linear algebra and statistics, should contact the instructors to request permission.

PHYS485 Electronic Circuits (3 Credits)

Theory and application to experimental physics of modern semiconductor analog and digital circuits. Emphasis on understanding passive and active elements in practical circuits. Topics span the range from simple transistor circuits to microcomputers.

Prerequisite: PHYS272 and PHYS276.

Restriction: Must be in a major within CMNS-Physics department.

PHYS487 Computerized Instrumentation (3 Credits)

Concentration on computer interfaces to measurement devices. Includes a review of basic electronic circuits and measurement devices. Extensive work with arduinos, making use of a variety of measurement probes. Includes introduction to the C++ programming language, the Segger development environment, and real-time operating systems (RTOS) used in advanced physics experiments.

Prerequisite: PHYS276 or Permission of Instructor.

Restriction: Departmental Permission.

PHYS499 Special Problems in Physics (1-16 Credits)

Research or special study. Credit according to work done.

PHYS601 Theoretical Dynamics (3 Credits)

Lagrangian and Hamiltonian mechanics, two-body central force problem, rigid body motion, small oscillations, continuous systems.

Prerequisite: PHYS410; or students who have taken courses with comparable content may contact the department.

PHYS603 Methods of Statistical Physics (3 Credits)

Foundations and applications of thermodynamics and statistical mechanics.

Credit Only Granted for: PHYS602 or PHYS603.

PHYS604 Methods of Mathematical Physics (3 Credits)

Ordinary and partial differential equations of physics, boundary value problems, Fourier series, Green's functions, complex variables and contour integration.

Prerequisite: Must have completed coursework in advanced calculus; and (PHYS411 and PHYS410). Or students who have taken courses with comparable content may contact the department.

PHYS606 Electrodynamics (4 Credits)

Classical electromagnetic theory, electro- and magnetostatics, Maxwell equations, waves and radiation, special relativity.

Prerequisite: PHYS604; or students who have taken courses with comparable content may contact the department.

PHYS610 Mathematical Methods and Their Applications in Classical Mechanics and Electrodynamics I (4 Credits)

First course of a two-semester graduate level sequence on classical mechanics, electrodynamics and relativity and the mathematics that underlie these subjects. Mathematical methods will generally be introduced in the context of relevant physical problems.

Prerequisite: Must have an outstanding undergraduate background in physics.

Restriction: Permission of CMNS-Physics Department.

PHYS611 Mathematical Methods and Their Applications in Classical Mechanics and Electrodynamics II (4 Credits)

Second course of a two-semester graduate level sequence on classical mechanics, electrodynamics and relativity and the mathematics that underlie these subjects. Mathematical methods will generally be introduced in the context of relevant physical problems.

Prerequisite: PHYS610 or permission of instructor.

Restriction: Permission by Department.

PHYS612 Quantum and Statistical Physics I (4 Credits)

First course of a two-semester graduate level sequence on topics in quantum mechanics and statistical mechanics.

Prerequisite: Must have an outstanding undergraduate background in physics.

Restriction: Permission of CMNS-Physics Department.

PHYS613 Quantum and Statistical Physics II (4 Credits)

Second course of a two-semester graduate level sequence on topics in quantum mechanics and statistical mechanics.

Prerequisite: PHYS612; or permission of instructor.

Restriction: Permission of the Physics Department.

PHYS615 Nonlinear Dynamics of Extended Systems (3 Credits)

Theory and applications of nonlinear dynamics of extended systems including nonlinear waves, pattern formation, turbulence, self-organized criticality and networks. Additional topics to be selected by instructor from areas of current research.

Prerequisite: PHYS601.

PHYS622 Introduction to Quantum Mechanics I (4 Credits)

First and second semesters. A study of the Schrodinger equation, matrix formulations of quantum mechanics, approximation methods, scattering theory, etc. Applications to solid state, atomic, and nuclear physics.

Prerequisite: Must have an outstanding undergraduate background in physics.

PHYS623 Introduction to Quantum Mechanics II (3 Credits)

First and second semesters. A study of the Schrodinger equation, matrix formulations of quantum mechanics, approximation methods, scattering theory etc., and applications to solid state, atomic, and nuclear physics. Continuation of PHYS 622.

Prerequisite: Must have an outstanding undergraduate background in physics.

PHYS624 Introduction to Quantum Field Theory (3 Credits)

Merging relativity and quantum mechanics using quantum fields, scalar field theory and canonical quantization, continuous and discrete symmetries, perturbation theory and scattering amplitudes, renormalized perturbation theory, Lorentz-group representations and fermionic field theories, massive and massless vector field theories and gauge invariance, quantum electrodynamics.

Prerequisite: PHYS613 or PHYS623.

PHYS625 Quantum Many-Body Theory I (3 Credits)

Non-relativistic second quantization, path integrals and functional field integrals, perturbation theory with Feynman diagrams, interacting electron gas.

Prerequisite: PHYS612 and PHYS613.

PHYS626 Quantum Many-Body Theory II (3 Credits)

Continuation of PHYS625. Functional-integral formulation of quantum field theory. Phase transitions and broken symmetry. Magnetism, superconductivity, and other applications. The renormalization group.

Prerequisite: PHYS612, PHYS613, and PHYS625.

PHYS662 Intersections of Technology and Policy: Modernizing the Energy System (3 Credits)

A broad, practical introduction to the issues and assessment approaches used to evaluate technical innovation in the Energy System. Introduction to the use of Sankey Diagrams, Life Cycle Analysis, Techno-economic analysis, and Equilibrium Economic Analysis, as well as policy factors such as Energy Efficiency Standards, Vehicle Fuel Economy, Feed-in-tariffs and environmental regulations.

Restriction: Must be a graduate student in the Natural Sciences, Engineering, Public Policy, or Economics; or must be a senior in the above disciplines with a minimum cumulative GPA of 3.0.

Credit Only Granted for: PHYS662 or PLCY699B.

PHYS675 Introduction to Relativity, Gravitation and Cosmology (3 Credits)

Review of special relativity, followed by a study of the equivalence principle, curved spacetimes, and Einstein's equations. Selected applications to the solar system, stellar structure, black holes, gravitational waves, and cosmology.

Prerequisite: PHYS606 and PHYS601.

PHYS685 Research Electronics (3 Credits)

An integrated lecture and laboratory course in electronics with equal emphasis on experimental methods and results and analysis using device models and up-to-date mathematical and numerical tools. Experiments and analysis of circuits with passive and single active devices form the background for the study of operational amplifiers, digital integrated circuits and systems, and microcomputers. The general topics of impedance matching, frequency response, feedback, interfacing and the extraction of signal from noise are stressed.

Prerequisite: An outstanding undergraduate background in physics or permission of the instructor.

Restriction: Must not have completed PHYS485.

Credit Only Granted for: PHYS485 or PHYS685.

PHYS703 Introduction to Nonequilibrium Statistical Physics (3 Credits)

Analysis and microscopic modeling of systems away from thermal equilibrium. Linear response theory, ergodicity, Brownian motion, Monte Carlo modeling, thermal ratchets, far-from-equilibrium fluctuation relations. Introduction to the theoretical tools of nonequilibrium phenomena and their application to problems in physics, chemistry and biology.

Prerequisite: PHYS603 or CHEM687; or permission of instructor.

Cross-listed with: CHEM703, BIPH703, CHPH703.

Credit Only Granted for: BIPH703, CHEM703, CHPH703, or PHYS703.

PHYS708 Seminar in Teaching College Physics (1 Credit)**PHYS709 Seminar in General Physics (1 Credit)****PHYS715 Chaotic Dynamics (3 Credits)**

Theory and applications of chaos in dynamical systems including such topics as strange attractors, Lyapanov exponents, quasiperiodicity, period doubling, intermittency, crises, fractal basin boundaries, chaotic scattering, KAM tori, and quantum chaos.

Prerequisite: PHYS601.

PHYS718 Seminar in General Physics (1 Credit)**PHYS719 Seminar in General Physics (1 Credit)****PHYS720 Quantum Technology (3 Credits)**

Physical principles behind emerging quantum technologies, from quantum-limited sensors to quantum simulators, by applying quantum optics formalism. Examination of current and emerging platforms for quantum technologies, including neutral atom, ion trap, superconducting circuit, photonic, and spin-based approaches. Focus on hurdles for implementing quantum devices for new applications.

Prerequisite: A good grounding in electromagnetism and quantum mechanics is necessary; familiarity with density matrices and master equations will be helpful.

PHYS721 Atomic and Optical Physics I (Survey) (3 Credits)

A survey of topics involving the physics of atoms and their interaction with radiation, including atoms in external fields, lasers, atomic spectroscopy and atomic structure.

Prerequisite: PHYS623.

PHYS728 Seminar in Atomic and Molecular Physics (1 Credit)**PHYS731 Solid State Physics: Survey (3 Credits)**

A variety of topics such as crystal structure, mechanical, thermal, electrical, and magnetic properties of solids, band structure, the Fermi surface, and superconductivity will be treated. Although the emphasis will be on the phenomena, the methods of quantum mechanics are freely employed in this description.

PHYS732 Introduction to Solid State Physics II (3 Credits)

Second semester of survey course in condensed matter physics including topics in semiconductors, surface physics, magnetism and superconductivity.

Prerequisite: PHYS731.

PHYS738 Seminar in Experimental Solid State Physics (1 Credit)**PHYS739 Seminar in Theoretical Solid State Physics (1 Credit)****PHYS741 Nuclear Physics: Survey (3 Credits)**

An introductory survey of nuclear physics, including the following topics: properties of the two-nucleon force and the most popular phenomenological potentials; properties of nuclei including radii, shapes and charge distributions; introduction to nuclear structure models, including collective, independent particle, and shell model; basic features of radioactivity including weak interactions and alpha decay; introduction to nuclear reactions, including phenomenological optical potentials and distorted wave approximations.

Prerequisite: PHYS623 and PHYS622.

PHYS748 Seminar in Experimental Nuclear Physics (1 Credit)**PHYS749 Seminar in Theoretical Nuclear Physics (1 Credit)****PHYS752 Elementary Particle Physics II: Theory (3 Credits)**

Survey of elementary particles and their properties, quantum field theory, meson theory, weak interactions, possible extensions of elementary particle theory.

Prerequisite: PHYS751 and PHYS624.

PHYS758 Seminar in Elementary Particles and Quantum Field Theory (1 Credit)**PHYS759 Seminar in Elementary Particles and Quantum Field Theory (1 Credit)****PHYS761 Plasma Physics I: Survey (3 Credits)**

A detailed study of plasma physics. The first semester treats particle orbit theory, magnetohydrodynamics, plasma waves, and transport phenomena.

Prerequisite: PHYS606 and PHYS604.

PHYS762 Plasma Physics II (3 Credits)

Continuation of PHYS 761. Vlasov theory, including waves, stability, and weak turbulence, kinetic equation theories of correlations and radiative processes.

Prerequisite: PHYS761.

PHYS769 Seminar in Plasma Physics (1 Credit)**PHYS778 Seminar in Space and Cosmic Ray Physics (1 Credit)****PHYS779 Seminar in General Relativity (1 Credit)****PHYS780 Network Science Literature Survey Seminar (1 Credit)**

Identify and develop a research project in Network Science. Practice communicating scientific results and concepts to individuals in their own field and in other fields to which the research is applicable.

Credit Only Granted for: PHYS780 or PHYS798T.

Formerly: PHYS798T.

PHYS781 Network Science Research-in-Progress Seminar (1 Credit)

Practice communicating scientific results and concepts to a general scientific audience, based on the student's research-in-progress.

Credit Only Granted for: PHYS781 or PHYS798U.

Formerly: PHYS798U.

PHYS782 Interdisciplinary Research and Communication Practicum for Data-Driven Science (3 Credits)

Semester-long, individual research project under the direction of a faculty mentor. Students will concurrently use this project to develop and refine their communication skills of scientific concepts. Will address interdisciplinary communication with some discussion of data exploration, analysis, and visualization.

Credit Only Granted for: PHYS782 or PHYS798N.

Formerly: PHYS798N.

PHYS798 Special Problems in Advanced Physics (1-3 Credits)

Projects or special study in advanced physics.

PHYS799 Master's Thesis Research (1-6 Credits)**PHYS808 Special Topics in General Physics (1-4 Credits)**

Credit according to work done.

PHYS809 Special Topics in General Physics (1-4 Credits)

Credit according to work done.

PHYS818 Special Topics in General Physics (1-4 Credits)

Credit according to work done.

PHYS819 Special Topics in General Physics (1-4 Credits)

Credit according to work done.

PHYS828 Special Topics in Atomic and Molecular Physics (1-4 Credits)

Credit according to work done.

PHYS829 Special Topics in Quantum Mechanics and Quantum Electronics (1-4 Credits)

Credit according to work done.

PHYS830 Topics in Theoretical Condensed Matter Physics (3 Credits)

A variety of current advanced topics in condensed matter theory will be treated in a tutorial format. Students should be familiar with concepts such as renormalization group theory, phase transitions, quantum information, and topological concepts.

Restriction: Permission of instructor.

PHYS838 Special Topics in Experimental Solid State Physics (1-4 Credits)

Credit according to work done.

PHYS839 Special Topics in Theoretical Solid State Physics (1-4 Credits)

Credit according to work done.

PHYS849 Special Topics in Theoretical Nuclear Physics (1-4 Credits)

Credit according to work done.

PHYS851 Advanced Quantum Field Theory (3 Credits)

Renormalized quantum electrodynamics, non-Abelian gauge theories, quantum chromodynamics and asymptotic freedom, electroweak theory and Higgs mechanism, path-integral formulation and non-perturbative approaches to quantum field theories.

Prerequisite: PHYS624.

PHYS858 Special Topics in Elementary Particles and Quantum Field Theory (1-4 Credits)

First semester.

Prerequisite: PHYS752 and PHYS851.

PHYS859 Special Topics in Elementary Particles and Quantum Field Theory (1-4 Credits)

Credit according to work done.

PHYS869 Special Topics in Plasma Physics (1-4 Credits)

Credit according to work done.

PHYS878 Special Topics in Space and Cosmic Ray Physics (1-4 Credits)

Credit according to work done.

PHYS879 Special Topics in General Relativity (1-4 Credits)

Credit according to work done.

PHYS888 Special Topics in Applied Physics (2 Credits)**PHYS889 Special Topics in Interdisciplinary Problems (1-4 Credits)**

Credit according to work done.

Restriction: Permission of instructor.

PHYS898 Pre-Candidacy Research (1-8 Credits)

PHYS899 Doctoral Dissertation Research (1-8 Credits)

PLCY - Public Policy

PLCY400 Senior Capstone (3 Credits)

Public Policy students will take the skills and knowledge gained through their curriculum and apply them through their senior capstone course. Students will work in teams on problems and issues presented by outside clients, with guidance from faculty facilitators and interaction with the clients. Each team will work with the client to address a particular problem and produce a mutually agreed upon outcome. These hands on projects will advance students' understanding of the analytical, leadership, communication and problem solving skills necessary to address today's policy problems while allowing them to gain professional level experience that could contribute to their success in their post UMD endeavors. The course will conclude with an event that allows all teams to present their findings and outcomes to their client while being evaluated by faculty and public policy professionals.

Prerequisite: PLCY306.

Restriction: Permission of PLCY-School of Public Policy; and must have earned a minimum of 90 credits.

PLCY401 Contemporary Issues in Public Policy (3 Credits)

An integrative course that allows policy students to explore the complexities of the policy-making process from the perspective of specific policy topics. They will learn about and discuss subject-based issues in a seminar format led by faculty and policy experts. Site visits to federal agencies, guest speakers, and round table sessions ensure that students receive a variety of real-world perspectives on their chosen policy area.

Restriction: Must have earned a minimum of 90 credits.

PLCY488 Advanced Special Topics in Public Policy (3 Credits)

Advanced special topics for upper level students focusing on topics related to Public Policy.

Restriction: Must have earned a minimum of 60 credits.

Repeatable to: 6 credits if content differs.

PLCY610 Quantitative Aspects of Public Policy (3 Credits)

Introduces statistical methods needed for evaluating and choosing among policy options. Topics include probability; decision-making under uncertainty; the organization, interpretation, and visual display of complex data; prediction and inferences about causality; hypothesis testing; and linear and multiple regression. Develops analytical skills and the ability to apply theory to complex, real-world problems.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY610 or PUA610.

Formerly: PUA610.

PLCY611 Quantitative Analysis of Policy Issues (3 Credits)

Study of a series of problems and the development of quantitative techniques to describe or evaluate the problem. The organization and interpretation of complex data and its use for prediction and inference about casual effects. The definition of objectives, trade-offs among objectives, and allocation of resources to meet objectives. Sensitivity of outcomes to changing conditions.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY611 or PUA611.

Formerly: PUA611.

PLCY620 Political Analysis (3 Credits)

Examination of politics as a process for allocating scarce resources among claimants for public benefits. Comparison of the allocative model of politics with other distributive processes, such as markets. Comparison of the model with behavior of different political institutions, such as Congress and the presidency. Study of politics as a process with distinctive concepts of rationality. The translation of voter and interest group preferences into public choices. The impact of political decisions on competing constituencies.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY620 or PUA620.

Formerly: PUA620.

PLCY630 Normative and Political Dimensions of Public Policy (3 Credits)

Explores the normative and political dimensions of governance—or policymaking—at the domestic (focusing on the US) and global levels. Policymaking involves a myriad of public and private actors at the local, national, transnational, and global levels that have competing aims and values. Their interaction produces formal and informal policies that affect the international order, interstate relations, subnational dynamics, and individuals. Drawing on theory from multiple disciplines and case examples, the course examines governance at these interrelated levels. Students learn core concepts, debates, and actors involved in policy making, develop tools to identify the causes and consequences of different policies, and build skills to influence public governance. Students also critically analyze how the actors, institutions, and scholarship covered perpetuate systemic racism and other inequities based on gender, class, ethnicity, sexual orientation, religion, dis/ability, etc.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY630 or PLCY688E.

Formerly: PLCY688E.

PLCY631 Governance: Leadership, Management and Accountability (3 Credits)

Emphasizes that regardless of technical specialization, public policy practitioners are required to lead people and organizations, manage resources and processes, and be held accountable for their actions. Provides knowledge, insights, skills, and abilities to successfully participate in and contribute to the policy process and lead and manage in line with democratic norms and values. Shows the need to pursue efficiency, effectiveness, and speed while also prioritizing justice, equity, procedural fairness, and due process. Focuses on the "people" side of organizational life, ethical decision-making, and the ability to communicate effectively.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY631 or PLCY688G.

Formerly: PLCY688G.

PLCY640 Microeconomic and Policy Analysis (3 Credits)

Applies intermediate microeconomic theory to public policy issues: resource allocation by firms and consumers; the response of economic agents to changes in incentives; market allocations in competitive and non-competitive environments; and market failures and government remedies. Uses extended case studies of particular issues in such areas as the environment (acid rain), international trade (tariffs), industry regulation (cable TV), and the provision of public goods (highways).

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY640 or PUAF640.

Formerly: PUAF640.

PLCY641 Macroeconomics and Policy Analysis (3 Credits)

Studies the behavior of the economy as a whole: the level of national income, unemployment, and inflation; the vulnerability of the U.S. economy to external influences; possible federal influence over the level of economic activity; and the consequences for prices, employment and the U.S. trade deficit. Also examines possible U.S. policy responses to widespread debt crises in developing countries.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY641 or PUAF641.

Formerly: PUAF641.

PLCY650 Moral Dimensions of Public Policy (3 Credits)

Explores the moral issues involved in public policy questions; the limits and usefulness of decision-making tools; problems of choosing, justifying and using criteria to judge a program's success and suitability; ethical issues involving the welfare state and income distribution; and possible obligations beyond one's political community and generation.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY650 or PUAF650.

Formerly: PUAF650.

PLCY660 Environmental Policy Workshop (3 Credits)

Students work as a team to analyze and recommend responses to a current environmental policy issue. Emphasizes problem definition, organization of information and presentation of results.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY660 or PUAF660.

Formerly: PUAF660.

PLCY670 Public Budgeting & Financial Management (3 Credits)

Covers how governments raise, spend, borrow, and manage public funds. Reviews federal, state, and local budget processes and introduces analytical techniques including basic spreadsheet skills, evaluating alternative revenue sources, revenue and expenditure forecasting, cost allocation, capital budgeting, cost-benefit analysis, discounting and present value, bond analysis, cash management and intergovernmental finance.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY670 or PUAF670.

Formerly: PUAF670.

PLCY671 Public Sector Finance (3 Credits)

The goal of this course is to provide a useful overview of basic public sector financial management principles in a simulated managerial situation to midcareer students currently working in government and nonprofit organizations.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY671 or PUAF671.

Formerly: PUAF671.

PLCY680 Examining Social Identity and Pluralism in Public Policy (3 Credits)

Understanding how groups and individuals develop and coexist in society is an essential part of public policy. Using the classroom as a laboratory, students will explore identity development and how the intersections of race, class, gender, sexual orientation, and other identities shape perceptions that inform decision-making and policy development. From historical scholars to current day movement leaders, this course equips students with tools necessary to critically analyze pluralism, power, and identity; and the skills needed to shape meaningful and equitable public policy and working and civic environments for all.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY680 or PLCY699D.

Formerly: PLCY699D.

PLCY688 Topics in Public Policy (1-3 Credits)

Special topics in Public Policy.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of instructor.

Repeatable to: 18 credits if content differs.

Credit Only Granted for: PLCY688 or PUAF688.

Formerly: PUAF688.

PLCY689 Public Policy Topics (1-3 Credits)

Special Topics in Public Policy.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of instructor.

Repeatable to: 18 credits if content differs.

Credit Only Granted for: PLCY689 or PUAF689.

Formerly: PUAF689.

PLCY690 Policy Engagement Project (3 Credits)

Students apply skills to a real-world public policy or management issue through a policy engagement (capstone) project. Students engage an outside client to define and complete a professional project under the supervision of School faculty. The project utilizes skills and knowledge gained through SPP coursework, expands students' integrative capacity, and serves as a bridge to professional opportunities. In this first half of a two-semester course sequence, students identify a client and problem, scope and define the problem, and draw up a plan of work. They perform background research on the problem, the context and relevant substantive domains. They also develop the research methodology for their project, which could include qualitative, quantitative, mixed methods, or other approaches. Projects vary in substantive focus and may encompass policy analysis, program evaluation, management or organizational studies, or comprehensive literature reviews.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY690 or PLCY699X.

Formerly: PLCY699X.

PLCY692 Leadership Principles and Practices (3 Credits)

This course will introduce leadership principles and practices to students by focussing on the theory of leadership, different leadership themes and skills, and discussions with practitioners.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY692 or PUA692.

Formerly: PUA692.

PLCY698 Selected Topics in Public Affairs (1-3 Credits)

Special topics that arise in public policy.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

PLCY699 Selected Topics Public Policy (1-3 Credits)

Special topics that arise in public policy.

Restriction: Must be in a major in PLCY-School of Public Policy; and permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY699 or PUA699.

Formerly: PUA699.

PLCY700 Trade Policy, Geopolitics, Development and Climate (3 Credits)

Examines challenges posed for international trade policy by geopolitical rifts, the increased weight of developing nations in the world economy, and climate deterioration. It covers the arguments for and against international trade amid polarized politics; how trade policy is made at the World Trade Organization, in Regional Deals, and in Washington, D.C; how businesses build global supply chains and deal with trade policy uncertainty; the trade policy of China and of developing nations more widely; and the role of trade and of trade policy in the fight against climate change.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

PLCY706 Public Policymaking for Journalists (3 Credits)

Focuses on the political, procedural and administrative realities of policy formation and implementation. Specifically for the Journalism students who staff the Capital News Service.

Restriction: Must be in a major in JOUR-Philip Merrill College of Journalism.

Credit Only Granted for: PLCY706 or PUA706.

Formerly: PUA706.

PLCY711 Public Management and Leadership (3 Credits)

Reviews the managerial, political, and ethical problems faced by public sector managers and leaders, including setting an organization's goals, obtaining and protecting a program mandate, designing a service delivery system and implementing a new program.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY711 or PUA711.

Formerly: PUA711.

PLCY712 Analysis of Fiscal Conditions (3 Credits)

The financial operations of U.S. government at various levels, with emphasis on local governments. Practical problems in revenue management, including revenue forecasting and cash flow analysis; debt management operations, such as borrowing; intergovernmental financial operations, such as grants management and reporting requirements, and personnel management issues that have a direct bearing on governmental finances.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY712 or PUA712.

Formerly: PUA712.

PLCY715 Government and Non-Profit Accounting (3 Credits)

Basic accounting practices of governmental and non-profit organizations. Emphasis on presentation of data in assessing an organization's financial health, financial data by organizations, structuring of accounting information to achieve management control, way in which evolving national standards influence kinds of information organizations have to apply in the future.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY715 or PUA715.

Formerly: PUA715.

PLCY716 State and Local Government Budgeting (3 Credits)

State and local government practices as a laboratory for studying public sector financial management.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY716 or PUA716.

Formerly: PUA716.

PLCY717 Federal Budgeting: Policy and Process (3 Credits)

Budgeting as a political and administrative instrument of government. Development of budgeting, the multiple uses of the budget, including role in fiscal policy and resource allocation, the roles and relationships of major participants, and effects of resource scarcity on budgeting behavior. Emphasis on the federal level.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY717 or PUA717.

Formerly: PUA717.

PLCY720 International Security Policy (3 Credits)

Reviews the principal features of international security as currently practiced. Traces the evolution of contemporary policy beginning with the initiation of nuclear weapons programs during World War II. Particular emphasis is given to experience of the United States and Russia, since the historical interaction between these two countries has disproportionately affected the international security conditions that all other countries now experience.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY720 or PUA720.

Formerly: PUA720.

PLCY722 Terrorism and Democracy (3 Credits)

United States government's decision process for dealing with crises; the options available to a president for deterring and handling incidents of terrorism, and how a president can and should select between the options.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY722 or PUA722.

Formerly: PUA722.

PLCY724 Problems of Global Security (3 Credits)

Explores the international security implications of globalization, presenting evidence indicating that altered circumstances will eventually induce a major redesign of prevailing security arrangements. Includes three segments: 1) a review of the principal problems that have been the focus of established security policy and would be the context for any major adjustment of policy; 2) an assessment of relationships with the major countries where traditional problems are most acutely present; and 3) a review of the organizing principles that can be expected to emerge in the new situation.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY724 or PUA724.

Formerly: PUA698W and PUA724.

PLCY732 Policy and Politics of Education Reform (3 Credits)

Examines education reform in its historical, fiscal, cultural, and legal contexts, and the changing relationship between education and economic opportunity. Focuses on institutional and normative issues, including national standards, public school choice, charter schools, vouchers and funding equity.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY732 or PUA732.

Formerly: PUA732.

PLCY734 Foundations of Social Policy (3 Credits)

Provides an overview of government's role in social policy and the history of the development of federal and state policies with respect to welfare, aging, education, and housing. Analyzes current federal institutions and legislation in the same policy areas and the demographic history of the United States. Develops skills in analytic writing and presentation of descriptive data.

Restriction: Must be in a major in PLCY-School of Public Policy.

Credit Only Granted for: PLCY734 or PUA734.

Formerly: PUA734.

PLCY735 Health Policy (3 Credits)

Analyzes the origins, history, status, and future of health care as problems in political and economic theory and as puzzles in policy formation. Considers current American reform controversies in the light of several disciplines and in comparison to foreign experiences and structures.

Credit Only Granted for: PLCY735 or PUA735.

Formerly: PUA735.

PLCY736 Managing Social Services (3 Credits)

Focuses on managing social services across federal, state, and local jurisdictions with an emphasis on how strong management can improve results. Exposes students to management thought and philosophy as applied to different social services and social policy challenges within various operating environments and programmatic settings. The watchwords for this course are "management" and "applied".

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PUA736, PLCY736 or PUA698V.

Formerly: PUA698V and PUA736.

PLCY737 Strategies of Equality (3 Credits)

Concentrates on the institutional and political means by which disadvantaged segments of the United States population have sought to enhance their social, economic and political prospects. Race, gender and disability are the substantive focal points, with considerable attention given to the challenges of African American socio-political uplift. Also explores legislation, litigation, administration, agitation (i.e. protest), and constitutional reform. Students become familiar with alternative conceptions of equality and the modes of argument employed in different institutional and political contexts.

Credit Only Granted for: PLCY737 or PUA737.

Formerly: PUA698Y and PUA737.

PLCY740 Public Policy and the Environment (3 Credits)

Surveys of major federal environmental legislation; the development and implementation of laws, and alternative ways of thinking about the relationship between humans and the environment.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY740 or PUA740.

Formerly: PUA740.

PLCY741 Global Environmental Problems (3 Credits)

Suitability of analytic tools for examining global environmental problems, human overpopulation, land abuse, ozone depletion, climate change, acid rain, loss of biological diversity, the scarcity of food, fresh water, energy and nonfuel mineral resources, and health hazards of pollutants toxic metals and radiation.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY741 or PUA741.

Formerly: PUA741.

PLCY742 Environmental Ethics (3 Credits)

Analyzes issues such as the relation between human beings and nature from the perspectives of the science, history, philosophy, and religion. Considers the bases for policies such as environmental regulation, public lands, and international conventions with respect to the environment.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY742 or PUA742.

Formerly: PUA742.

PLCY743 Ecological Economics (3 Credits)

Explores how taking account of the economic system's fundamental dependence on the environment alters conventional economic goals, priorities, theories, and prescriptions.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY743 or PUA743.

Formerly: PUA743.

PLCY744 Environment and Development (3 Credits)

Analyzes sustainable development and its conflicting interpretations. The dominant view, as expressed in the World Bank's 1992 World Development Report, is studied, along with some critical responses. Further readings on issues of population, consumption and development indicators.

Credit Only Granted for: PLCY744 or PUA744.

Formerly: PUA744.

PLCY745 Human Health and Environmental Policy (3 Credits)

Reviews the major human physiological systems and their integrated toxicological functions; considers key bodily defenses; and discusses classic, emerging, and ambiguous risks; in all ecological context. Applies to scientific controversy, the methods of policy formation, such as risk analysis, social-cost analysis, "outcomes" analysis, and decision analysis, all in political-economic context.

Credit Only Granted for: PLCY745 or PUA745.

Formerly: PUA745.

PLCY746 Dynamic Modeling for Environmental Investment and Policy Making (3 Credits)

Examines the theory, methods and tools to dynamic modeling for policy and investment decision making, with special focus on environmental issues. Provides extensive hands-on modeling experience and makes use of state-of-art computing methods to translate theory and concepts into executable models.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY746 or PUA746.

Formerly: PUA698M and PUA746.

PLCY752 Managing Differences:Resolving Conflict and Negotiating Agreements (3 Credits)

Enhances the student's negotiation and leadership skills for managing differences between individuals and groups. Students study the nature of conflict, learn how to handle two and multiparty conflicts, exerting leadership where there are no hierarchy leaders, and explore the impact of facilitators and mediators on the negotiating process. Blends skill building exercises and theory discussions about the behavior of groups and individuals in groups to understand negotiation dynamics.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY752 or PUA752.

Formerly: PUA752.

PLCY753 Advanced Negotiations (3 Credits)

Deepens the student's negotiation and leadership skills for managing differences between individuals and groups. Cover conflict, escalation, dealing with intractable conflicts, sustaining agreements in inter-group conflicts, and the effects of trauma on negotiations.

Prerequisite: PUA752.

Credit Only Granted for: PUA698C, PUA753 or PLCY753.

Formerly: PUA698C and PUA753.

PLCY770 Seminar in Housing and Community Development Strategies (3 Credits)

Detailed examination of community and social policy issues relating to the construction and management of affordable housing.

Restriction: Must be in a major in PLCY-School of Public Policy.

Credit Only Granted for: PLCY770 or PUA770.

Formerly: PUA770.

PLCY771 Housing and Community Development Overview (3 Credits)

An overview of the housing development process. Community development context, financial analysis, analytical tools including microcomputer applications, architectural and design issues, engineering constraints.

Restriction: Must be enrolled in the executive training program sponsored by the Department of Housing and Urban Development.

Credit Only Granted for: PLCY771 or PUA771.

Formerly: PUA771.

PLCY772 Housing Finance (3 Credits)

Fundamentals of housing investment analysis. Structuring feasibility analyses, appraisals, pro forma statements, return on investment, leverage analysis, underwriting ratios, taxation and syndication.

Restriction: Must be enrolled in the executive training program sponsored by the Department of Housing and Urban Development.

Credit Only Granted for: PLCY772 or PUA772.

Formerly: PUA772.

PLCY773 Housing Clinic (3 Credits)

Issues and strategies applicable to urban, suburban, and rural areas. Field experience and a team exercise, using the case study method, will give an opportunity for concrete application of the concepts to a specific set of community problems.

Restriction: Must be enrolled in the executive training program sponsored by the Department of Housing and Urban Development.

Credit Only Granted for: PLCY773 or PUA773.

Formerly: PUA773.

PLCY774 Asset Management (3 Credits)

Asset manager's role at each stage of the property's life cycle and property analysis, including cash flow debt and staffing. Topics include capital needs; major building systems, costs and useful lives; marketing and outreach; and anti-crime strategies. Field trips to problem properties to perform cost/benefit analysis, diagnose potential cures, and prepare action plans.

Restriction: Must be enrolled in the executive training program sponsored by the Department of Housing and Urban Development.

Credit Only Granted for: PLCY774 or PUA774.

Formerly: PUA774.

PLCY780 The American Foreign Policy-Making Process (3 Credits)

Survey and analysis of the governmental institutions and processes which shape U.S. global engagement on national security and international economic issues. Particular emphasis is given to executive-congressional relations and the broader domestic roots of foreign policy.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY780 or PUA780.

Formerly: PUA780.

PLCY781 International Economic Policy (3 Credits)

Issues and choices facing the United States in today's global economy. Primary, but not exclusive, emphasis is given to "competitive interdependence" among advanced industrial societies.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY781 or PUA781.

Formerly: PUA781.

PLCY782 International Development Economics (3 Credits)

Examines key current economic and policy issues for developing and transition economies. Topics include inflation stabilization, fiscal policy, selected trade issues, dealing with international capital flows, the role of multilateral organizations, such as the International Monetary Fund and the World Bank, and issues relating to saving, investment and growth.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PUA698U, PUA782 or PLCY782.

Formerly: PUA698U and PUA782.

PLCY783 Development and Foreign Aid (3 Credits)

Examines the empirical, conceptual, and ethical dimensions of international development policies and U.S. foreign aid. What is the present character of development in poor countries/regions? How should development be conceived? What development strategies are best? What is and should be the purpose of U.S. foreign aid and development assistance?

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY783 or PUA783.

Formerly: PUA783 and PUA783.

PLCY784 Disease, Disaster, and Development (3 Credits)

Studies development, the process by which needy people in fragile societies become self-sufficient people in resilient societies, in relation to disease and disaster, with particular attention to the developed world's response.

Credit Only Granted for: PUA784, PUA784 or PLCY784.

Formerly: PUA784 and PUA784.

PLCY790 Project Course (3 Credits)

Students work at a sponsoring government agency or private firm researching problem of interest to sponsor and relevant to concentration. Emphasis on problem definition, organizing information, and both oral and written presentation of results.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY790 or PUA790.

Formerly: PUA790.

PLCY798 Readings in Public Policy (1-3 Credits)

Guided readings for discussions on public policy.

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY798 or PUA798.

Formerly: PUA798.

PLCY898 Pre-Candidacy Research (1-8 Credits)

Credit Only Granted for: PLCY898 or PUA898.

Formerly: PUA898.

PLCY899 Doctoral Dissertation Research (1-8 Credits)

Restriction: Must be in a major in PLCY-School of Public Policy; or permission of PLCY-School of Public Policy.

Credit Only Granted for: PLCY899 or PUA899.

Formerly: PUA899.

PLSC - Plant Sciences

PLSC400 Plant Physiology (4 Credits)

An in-depth examination of the unique molecular and physiological principles necessary to understand how plants grow and respond to the environment at the cellular and organismal levels. Plants evolved unique metabolism and survival strategies, so students should be prepared to enter a world that may be new to them.

Prerequisite: Minimum grade of C- in BSCI170 and BSCI171; or minimum grade of C- in PLSC201; and minimum grade of C- in CHEM231 and CHEM232; or minimum grade of C- in CHEM237.

Cross-listed with: BSCI442.

Credit Only Granted for: BSCI442 or PLSC400.

PLSC401 Pest Management Strategies for Turfgrass (3 Credits)

Interdisciplinary view of weed, disease, and insect management from an agronomy perspective. Plant responses to pest invasion, diagnosis of pest-related disorders, and principles of weed, disease and insect suppression through cultural, biological and chemical means are discussed.

Prerequisite: PLSC305.

PLSC402 Sports Turf Management (3 Credits)

Sports turf management, including design, construction, soil modification, soil cultural techniques, pesticide use, fertilization, and specialized equipment.

Prerequisite: PLSC305 and PLSC401.

PLSC404 Plant and Fungal Metabolism (3 Credits)

An introduction to biochemistry and metabolism in plants and fungi, covering the biosynthesis of compartments in plant and fungal cells with biological molecules such as nucleic acids, amino acids and lipids. Energy flow processes such as photosynthesis, carbohydrate metabolism and respiration, are covered in the course. The integration of different pathways in plant development and responses to environmental stresses will be discussed.

Prerequisite: Minimum grade of C- in BSCI170 and BSCI171; or minimum grade of C- in PLSC201 and PLSC206.

PLSC405 Agroecology (3 Credits)

How can we balance the multiple, and often competing objectives of sustainable agricultural intensification to promote both agricultural productivity and human wellbeing? The answer to this question requires a transdisciplinary, agroecological perspective. Agroecology is the integrative study of the ecology of the entire food system, encompassing ecological, economic and social dimensions. This course is designed to introduce various topics in agroecology (e.g. organic agriculture, biodiversity, the Farm Bill). We will take an ecosystems approach to the study of agriculture that will enable students to analyze the environmental, social, and economic interconnections within various types of agricultural systems locally and globally.

Prerequisite: At least one course in ecology with a minimum grade of C-; or permission of instructor.

Recommended: BSCI361 or PLSC471; or any BSCI or ENST ecology course.

Credit Only Granted for: PLSC405 or PLSC605.

Additional Information: Class will be held on campus, with two day-long field trips to local farms.

PLSC410 Commercial Turf Maintenance and Production (3 Credits)

Agronomic programs and practices used in hydroseeding, commercial lawn care, sod production and seed production. Current environmental, regulatory and business management issues confronting the turfgrass industry.

Prerequisite: PLSC305; or permission of AGNR-Plant Science & Landscape Architecture department.

PLSC411 Plant Genetics (3 Credits)

An introduction to genetic principles and technologies in plants, centered on linking phenotype to genotype. Topics include Mendelian inheritance of single and complex traits, epigenetics, population genetics and plant breeding. Examples on creating and mapping genetic mutations in both model plants and non-model crops are discussed. Current genetic and genomic approaches are highlighted, such as genome engineering and reprogramming, TILLING, and genome-wide association mapping.

Prerequisite: Minimum grade of C- in BSCI170 and BSCI171.

PLSC420 Principles of Plant Pathology (4 Credits)

An introduction to the causal agents, nature and management of plant diseases with particular attention paid to economically important diseases of horticultural and agronomic crops.

Prerequisite: Minimum grade of C- in CHEM131, CHEM132, and PLSC201; or students who have taken courses with comparable content may contact the department.

PLSC425 Green Roofs and Urban Sustainability (1 Credit)

The integration of disciplines associated with sustainability issues. Topics range from plant science to design to policy, all of which can contribute to improving the urban environment.

Credit Only Granted for: PLSC425 or PLSC489V.

Formerly: PLSC489V.

PLSC427 Plant Microbe Associations (3 Credits)

Encompasses advanced investigation and analyses of the ecology, physiology and molecular genetics of plant-microbe interactions along with their impact on crop production, ecological and food production systems.

Credit Only Granted for: PLSC489W or PLSC427.

Formerly: PLSC489W.

PLSC430 Water and Nutrient Planning for the Nursery and Greenhouse Industry (3 Credits)

Skills will be developed in order to write nutrient management plans for the greenhouse and nursery industry. Completion of this course can lead to professional certification in nutrient planning by the State of Maryland after MDA examinations are passed.

Prerequisite: Minimum grade of C- in CHEM131 and CHEM132; or minimum grade of C- in ENST200; or permission of instructor.

Recommended: PLSC432.

PLSC432 Greenhouse Crop Production (3 Credits)

The commercial production and marketing of ornamental plant crops under greenhouse, plastic houses and out-of-door conditions. Integrating an understanding of basic plant physiological mechanisms into the decision-making process for the design, construction, maintenance and day-to-day management of greenhouse operations.

Prerequisite: Minimum grade of C- in PLSC201 .

PLSC433 Technology of Fruit and Vegetable Production (4 Credits)

A critical analysis of research work and application of the principles of plant physiology, chemistry and botany to practical problems in the commercial production of fruit and vegetable crops.

Prerequisite: Minimum grade of C- in PLSC201, PLSC271, and ENST200; or students who have taken courses with comparable content may contact the department.

Restriction: Junior standing or higher.

PLSC452 Environmental Horticulture (3 Credits)

Environmental horticulture principles used in the establishment and maintenance of plant materials in residential and commercial landscapes will be addressed. The effect of soil conditions, environmental factors, and commercial practices will be discussed in relation to the growth and development of newly-installed plant materials. Field diagnostics will be used by students to assess significant problems of plant decline. Environmental sustainability will be combined with current commercial practices of storm water management, nutrient management, and irrigation management to achieve an integrated approach to plant management.

Prerequisite: Minimum grade of C- in PLSC110 and PLSC111; or minimum grade of C- in PLSC112 and PLSC113; and minimum grade of C- in PLSC253 and PLSC254.

PLSC453 Weed Science (3 Credits)

Weed identification, ecology, and control (cultural, mechanical, biological, and chemical methods).

PLSC460 Application of Knowledge in Plant Sciences (3 Credits)

A capstone course based on interactions with plant science professionals and student-led class discussions. Students will apply their knowledge and experience to practical issues in the discipline, further develop critical thinking ability, and enhance their communication, teamwork, and professional skills. Topics will include nutrient management, integrated pest management, plant interactions with urban and rural ecosystems, planning of public grounds, plant biotechnology, and teaching skills.

Prerequisite: Minimum grade of C- in PLSC110 and PLSC111; or minimum grade of C- in PLSC112 and PLSC113; or minimum grade of C- in PLSC201; or permission of instructor.

Recommended: ENGL393 and ENST200; and (PLSC389 or PLSC399).

Restriction: Senior standing or higher.

PLSC461 Cultural Management of Nursery and Greenhouse Systems: Substrates (1 Credit)

One of three 1-credit modules (PLSC461, PLSC462 and PLSC464) covering the management techniques used in the intensive culture of plants in commercial operations. Specifically, this module covers the composition, handling, physical and chemical properties of substrates and how they should be managed to maximize plant growth.

Credit Only Granted for: PLSC461 or PLSC489T.

Formerly: PLSC489T.

Additional Information: Course material is delivered primarily online, but a four hour face-to-face lecture/lab will be held at the end of the module. PLSC461, PLSC462 and PLSC464 will be taught sequentially during the semester.

PLSC462 Cultural Management of Nursery and Greenhouse Systems; Irrigation (1 Credit)

One of three 1-credit modules (PLSC461, PLSC462 and PLSC464) covering the management techniques used in the intensive culture of plants in commercial operations. Specifically, this module covers water quantity and quality issues, water supply (basic hydraulics), irrigation system design and irrigation system evaluation (performance) to maximize water application efficiency.

Credit Only Granted for: PLSC462 or PLSC489W.

Formerly: PLSC489W.

Additional Information: Course material is delivered primarily online, but a four hour face-to-face lecture/lab will be held at the end of the module. PLSC 461, 462 and 464 will be taught sequentially during the semester.

PLSC464 Cultural Management of Nursery and Greenhouse Systems: Nutrients (1 Credit)

One of three 1-credit modules (PLSC461, PLSC462 and PLSC464) covering the management techniques used in the intensive culture of plants in commercial operations. Specifically, this module covers the basics of fertilization, different fertilization strategies and nutrient use and efficiency, to optimize nutrient application practices in intensive plant production systems.

Credit Only Granted for: PLSC464 or PLSC489Z.

Formerly: PLSC489Z.

Additional Information: Course material is delivered primarily online, but a four hour face-to-face lecture/lab will be held at the end of the module. PLSC 461, 462 and 464 will be taught sequentially during the semester.

PLSC471 Forest Ecology (3 Credits)

An understanding of the forest ecosystem, its structure and the processes that regulate it are provided. It also considers changes that occur in forests, the interaction of environment and genetics in promoting ecosystem sustainability, and the role of human influences on urban forest ecosystems.

Prerequisite: Minimum grade of C- in PLSC201; or minimum grade of C- in BSCI160 and BSCI161; or minimum grade of C- in BSCI106.

PLSC472 Capstone-Urban Forest Project Management (3 Credits)

Students will synthesize the ideas and information learned from their studies in urban forestry. Working in teams, students will complete projects involving real-world issues. Student projects will use scientific, social, political and ethical considerations in an interdisciplinary approach to provide solutions to their problem.

Prerequisite: Minimum grade of C- in ENST200, PLSC272, and PLSC471.

Restriction: Senior standing or higher; and must be in a major within AGNR-Plant Science & Landscape Architecture department.

PLSC473 Woody Plant Physiology (3 Credits)

Concentration is placed on physiological processes important to woody plant growth and development. Emphasis will be placed on current concepts and theories of how woody plants grow and develop, and the critical assessment of current research in woody plant physiology. Course readings will include textbook assignments and selected papers from the current scientific literature.

Prerequisite: Minimum grade of C- in PLSC400 or BSCI442; or minimum grade of C- in PLSC201 and PLSC206; or students who have taken courses with comparable content may contact the department.

PLSC480 Urban Ecology (3 Credits)

Cities are rapidly increasing in number and size across the globe, transforming local ecosystems. This course examines urban environments as coupled social-ecological systems at multiple scales, from streets and parks to urban landscapes patterns and global patterns of biodiversity. Ecological principles are applied in the urban context, including habitats, biodiversity, ecological processes, and ecosystem services of urban environments, with applications to problems in urban land management, decision-making and design.

Prerequisite: Minimum grade of C- in PLSC471, ENST360, BSCI363, or BSCI160; or other coursework/experience considered for instructor permission.

Additional Information: Class will be held both on campus and at other locations such as the U.S. Botanic Garden, local parks, and urban and suburban locations off campus.

PLSC481 Vegetation Assessment and Analysis (2 Credits)

An overview of vegetation assessment through the collection of data in the field (e.g. plots and transects) and the analysis of existing data and remotely detected images (e.g. Aerial photographs and GIS layers).

Prerequisite: PLSC110 and PLSC111; or (BSCI160 and BSCI161); or permission of instructor.

Recommended: PLSC201, BSCI360, PLSC226, or PLSC471.

PLSC489 Special Topics in Plant Science (1-3 Credits)

A lecture and or laboratory series organized to study a selected phase of Plant Science not covered by existing courses. Credit according to time scheduled and organization of the course.

Repeatable to: 6 credits if content differs.

PLSC601 Plant Genomics (3 Credits)

An advanced course in plant genomics which is the study of genes of plant chromosomes. It will cover current topics in gene mapping, molecular markers, QTLs, gene sequencing, and genetic engineering with special focus on agriculturally important traits.

Credit Only Granted for: AGRO601, NRSC601, or PLSC601.

Formerly: NRSC601.

PLSC602 Advanced Crop Breeding II (2 Credits)

Quantitative inheritance in plant breeding including genetic constitution of a population, continuous variation, estimation of genetic variances, heterosis and inbreeding, heritability, and population movement.

Prerequisite: PLSC601; and must have completed a graduate statistics course.

PLSC605 Advanced Agroecology (3 Credits)

How can we balance the multiple, and often competing objectives of sustainable agricultural intensification to promote both agricultural productivity and human wellbeing? The answer to this question requires a transdisciplinary, agroecological perspective. Agroecology is the integrative study of the ecology of the entire food system, encompassing ecological, economic and social dimensions. This course is designed to introduce various topics in agroecology (e.g. organic agriculture, biodiversity, the Farm Bill). We will take an ecosystems approach to the study of agriculture that will enable students to analyze the environmental, social, and economic interconnections within various types of agricultural systems locally and globally. Students will be required to plan and execute group discussions and learning activities.

Prerequisite: At least one course in ecology with a minimum grade of C-; or permission of instructor.

Recommended: BSCI361 or PLSC471; or any BSCI or ENST ecology course.

Additional Information: Class will be held on campus, with two day-long field trips to local farms.

PLSC608 Research Methods (2 Credits)

An overview of research methods and applications related to plant sciences. Topics covered include current research advances, professional conduct and ethics, and preparation of grant proposals, manuscripts, and scientific presentations.

Prerequisite: Permission of AGNR-Plant Science & Landscape Architecture department.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: AGRO608, NRSC608, or PLSC608.

Formerly: NRSC608.

PLSC609 Integrated Pest Management (1-4 Credits)

A modular course with an interdisciplinary approach to the theory and practice of integrated pest management. Topics of modules, each 3-4 weeks long, vary each semester over a three year time frame, with the first module serving as a prerequisite for all other modules. See www.EntmClasses.umd.edu for description of modules.

Restriction: Permission of instructor.

Repeatable to: 10 credits if content differs. Cross-listed with ENTM609.

Credit Only Granted for: ENTM609, NRSC609, or PLSC609.

Formerly: NRSC609.

PLSC618 Advances in Research; Critiquing Primary Plant Science Literature (1 Credit)

Discussion of advances in plant science research based on classic and current scientific literature.

Repeatable to: 7 credits.

PLSC619 Seminars in Plant Science and Landscape Architecture (1 Credit)

Enhancement of student learning and enrichment of student curriculum for the Plant Science Graduate Program through a combination of research seminar attendance and post-seminar discussion. Research seminars will be given by prominent scientists in the field of plant sciences and post-seminar discussions will be facilitated by the instructor along with student discussion leaders.

Repeatable to: 7 credits if content differs.

PLSC682 Methods of Plant Science Research (4 Credits)

The application of biochemical and biophysical methods to problems in biological research with emphasis on plant materials.

Credit Only Granted for: HORT682, NRSC682, or PLSC682.

Formerly: NRSC682.

PLSC685 Advanced Plant Ecophysiology (3 Credits)

Growth, productivity and survival are intimately linked to a plant's ability to adjust to its environment. The information provided in this course is designed to provide an introduction to the basic physical and physiological principles necessary for understanding the interactions between plants and their environment. The overall objective of this course is to understand plant responses and adaptations to the environment and the ecological relevance of these responses.

Prerequisite: Must have completed one course in plant physiology.

Credit Only Granted for: NRSC685 or PLSC685.

Formerly: NRSC685.

PLSC689 Special Topics (1-3 Credits)

Credit according to time scheduled and organization of the course.

Organized as a lecture series on a specialized advanced topic.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: HORT689, NRSC689, or PLSC689.

Formerly: NRSC689.

PLSC782 Physiology, Biochemical and Molecular Biology of Herbicides and Plant Growth Regulators (3 Credits)

In this class we will study natural and synthetic chemicals which regulate the growth and development of plants. The mechanism by which herbicides and plant growth regulators express their activity on plants and the impact of these chemicals on the environment will be a primary focus of this course. The interaction of these chemicals with biotechnology advances will also be examined.

Prerequisite: Minimum grade of C- in PLSC400 or BSCI442.

PLSC785 Advanced Post-Harvest Physiology (3 Credits)

Physiological, biochemical and molecular aspects of senescence of detached plant organs, such as fruits, leaves and flowers.

Prerequisite: Minimum grade of C- in PLSC474 and BCHM461; or permission of AGNR-Plant Science & Landscape Architecture department.

PLSC789 Advances in Research (1 Credit)

Discussion of advances in plant science research based on classic and current scientific literature.

Repeatable to: 7 credits if content differs.

Credit Only Granted for: AGRO789, NRSC789, or PLSC789.

Formerly: NRSC789.

PLSC798 Graduate Seminar (1 Credit)

First and second semester.

Repeatable to: 6 credits if content differs.

Credit Only Granted for: AGRO798, HORT798, NRSC798, or PLSC798.

Formerly: NRSC798.

PLSC799 Master's Thesis Research (1-6 Credits)**PLSC802 Epidemiology and Plant Disease Management (3 Credits)**

An in-depth advanced course for graduate students in plant pathology, agronomy, entomology and horticulture emphasizing the principles of effective plant disease management in the agroecosystem.

PLSC805 Advanced Crop Physiology (2 Credits)

Major emphasis will be on physiological processes affecting yield and productivity of major food fiber and industrial crops of the world.

Topics such as photosynthesis, respiration, photorespiration, nitrogen metabolism will be related to crop growth as affected by management decisions. Topics of discussion will also include growth analysis and the use of computer modeling of crop growth by plant scientists.

Prerequisite: Minimum grade of C- in PLSC400; or minimum grade of C-in BSCI442; and must have completed advanced training in plant sciences.

PLSC898 Pre-Candidacy Research (1-8 Credits)**PLSC899 Doctoral Dissertation Research (1-8 Credits)**

PORT - Portuguese

PORT405 Portuguese for Spanish Speakers (3 Credits)

Intensive basic grammar, reading and auditory comprehension. Native or acquired fluency in Spanish required.

Restriction: Must have native or acquired fluency in Spanish.

PORT408 Special Topics in Portuguese Literature (3 Credits)

Major themes and literary developments from the late 18th century to the present.

Repeatable to: 6 credits if content differs.

PORT409 Special Topics in Brazilian Literature (3-6 Credits)

Major themes and literary development from the late eighteenth century to the present. Specific topic to be announced each time the course is offered.

PORT410 Tropical Dreams: Nature and Art in Brazil (3 Credits)

Ideas, images, and representations of the tropics have historically portrayed them as exotic, lush, underdeveloped, and resource-rich places. This course interrogates how concepts of tropicality and nature have influenced the culture, politics, and society of a particular country: Brazil. We examine how nature, a key concept in tropicality, has been represented and understood in different terms throughout history and how these representations have informed environmental discourses and attitudes. Furthermore, we critically analyze how racialized notions of the tropics that shaped structures of oppression have been constructed, perpetuated, and contested. Our objects of analysis will consist of artistic depictions of the tropical world in addition to films, music, literature, and critical thought.

Credit Only Granted for: PORT409A, SPAN609A, LACS448Y, or PORT410.

Formerly: PORT409A.

PORT478 Themes and Movements of Luso-Brazilian Literature in Translation (3 Credits)

A study of specific themes and movements either in Portuguese or Brazilian literature, as announced. Designed for students for whom the literatures would be inaccessible in Portuguese.

Repeatable to: 6 credits if content differs.

PORT480 Machado de Assis (3 Credits)

Fiction of Machado de Assis covering his romantic and realistic periods.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

PORT609 Special Topics - Brazilian Literature (3-6 Credits)

Representative topics/authors/works of Brazilian literature. Texts in Portuguese: classes conducted in Portuguese and Spanish.

Prerequisite: Must have reading knowledge of Portuguese - fluency in Spanish or Portuguese.

Repeatable to: 6 credits if content differs.

PORT699 Independent Study of Portuguese (1-3 Credits)

This course is designed to provide graduate students an opportunity to pursue independent study under the supervision of a member of the department.

Repeatable to: 3 credits.

PSYC - Psychology

PSYC401 Biological Bases of Behavior Laboratory (4 Credits)

Students will study some of the key concepts in neuroscience by combining behavioral experiments with electrode recordings from neurons controlling the behaviors. We will intensively examine concepts like creation of rhythmic behaviors (walking, flight), neurotransmitters' control of aggression, drug effects on synaptic activity, high-speed neural circuits for effective escape from predators, and CNS maps in the visual system for directing prey capture. Students will learn microsurgery and a broad range of neural recording techniques. We work with animals (invertebrates, cold-blooded vertebrates) every week. A strong biology background will be beneficial.

Prerequisite: PSYC300; and (PSYC202, NEUR200, or BSCI353).

Restriction: Permission of instructor; and must be in Psychology program; and must have earned a minimum of 85 credits.

Credit Only Granted for: PSYC401, NEUR405, BSCI455 or BSCI454.

PSYC403 Animal Behavior (3 Credits)

Reviews the theoretical framework underlying the study of animal behavior. The genetic, hormonal and physiological basis of behavior, and the relation to ecological and evolutionary processes will be discussed using examples that range from invertebrate animals to humans.

Prerequisite: PSYC202 or NEUR200.

PSYC404 Introduction to Behavioral Pharmacology (3 Credits)

Theoretical viewpoints on the interaction of drugs and behavior. Basic principles of pharmacology, the effects of drugs on various behaviors, experimental analysis of drug dependence and abuse, and neuropharmacology and behavior.

Prerequisite: PSYC202 or NEUR200.

Restriction: Must be in Psychology program.

PSYC406 Neuroethology (3 Credits)

A merger between the disciplines of neuroscience and ethology (animal behavior) studies the behavioral functions of nervous systems using a comparative and evolutionary approach. Students will learn how the nervous system controls behavioral patterns in a variety of different organisms ranging from insects to mammals.

Prerequisite: PSYC301, PSYC202 or NEUR200.

Restriction: Must be in Psychology program.

PSYC407 Behavioral Neurobiology Laboratory (4 Credits)

In this lab course, you will collect behavioral and physiological data in humans using classic behavioral paradigms, design models of neural circuits that can explain those behaviors, record neural activity from the roach, and write lab reports describing your results and how they relate to patients with psychiatric illnesses.

Prerequisite: PSYC300; and (PSYC202 or NEUR200).

Restriction: Must be in Psychology program; and must have earned a minimum of 85 credits.

PSYC409 Topics in Neurosciences Seminar (1 Credit)

Current research in neurosciences will be presented, read, and discussed. Emphasis will change each term.

Restriction: Permission of BSOS-Psychology department; and junior standing or higher.

Repeatable to: 4 credits if content differs.

PSYC411 Introduction to Functional Magnetic Resonance Imaging (3 Credits)

An introduction to functional magnetic resonance imaging (fMRI). Students will be taught about formulating testable hypotheses with fMRI, utilizing basic methods in fMRI studies, and understanding existing limitations of fMRI studies in the literature.

Prerequisite: PSYC200 and PSYC300; and (PSYC202 or NEUR200).

Restriction: Must be in a major within BSOS-Psychology department.

Credit Only Granted for: NACST728F or PSYC411.

PSYC413 Music Cognition (3 Credits)

Overview of the psychological foundations of musical behavior, focusing on underlying perceptual, cognitive, and neural mechanisms. Students will read and discuss primary behavioral and neuroscience research on how people perceive, remember, enjoy, and use music across the lifespan.

Prerequisite: PSYC300.

Credit Only Granted for: PSYC413 or PSYC489X.

Formerly: PSYC489X.

PSYC414 Science of Sleep and Biological Rhythms (3 Credits)

Sleep is a powerful, inescapable, misunderstood, and mysterious presence in our lives. The course will begin with a review of the basics of sleep and biological rhythms with a focus on the underlying neurobiology. The bulk of the semester will be in-depth discussions of topics in sleep and circadian rhythms primarily chosen by the students. A few examples: narcolepsy, sleep in primitive cultures, lucid dreaming, racial and cultural differences in sleep and sleep disorders, the biology of sleep and circadian rhythms during adolescence, CNS control of dreaming, sleep and states of consciousness, sleeping to remember vs. sleeping to forget, legal ramifications of parasomnias, e.g. sleepwalking, and the relationships between sleep deprivation and obesity.

Prerequisite: PSYC301, PSYC202, or NEUR200; or permission of instructor.

Restriction: Must be in a major within the BSOS-Psychology department; and restricted to psychology majors during the registration period.

PSYC416 Development of Attachment in Infancy and Childhood: Theory, Research, Methods, and Clinical Implications (3 Credits)

Overview of the development of attachment during infancy and childhood, examining theory, research methods, research findings, and clinical implications. Students will observe videos of attachment assessments, lead class discussion of readings, make class presentations, and complete writing assignments.

Prerequisite: PSYC355; or permission of instructor.

Restriction: Must be in a major within the BSOS-Psychology department.

PSYC417 Data Science for Psychology and Neuroscience Majors (4 Credits)

A large number of industry and academic jobs require basic programming and data analysis skills. This class represents an introduction to both. Students will learn to program in R and will briefly be introduced to Python, the two most popular programming languages for data science. Common constructs shared by a variety of procedural programming languages will be emphasized. Basic statistics and probability theory will be reviewed from a computational perspective, and more advanced topics introduced. During the course, students will simulate toy data sets which they will then analyze knowing how the data came about, as well as work with real data. The class is highly hands-on with a large number of in-class lab and homework projects. Expect to work a lot and move quickly. Because of the hands-on nature of the class, the overall focus is more on application and execution rather than theory. However, some theory is covered at a high level so that students are aware of why they are doing something, rather than mindlessly writing code.

Prerequisite: PSYC200 and PSYC300; and (MATH120, MATH130, or MATH140).

Credit Only Granted for: PSYC489D or PSYC417.

Formerly: PSYC489D.

PSYC420 Experimental Psychology: Social Psychology Laboratory (4 Credits)

A laboratory course to provide a basic understanding of experimental methods in social psychology and experience in conducting research on social processes.

Prerequisite: PSYC300 and PSYC221.

Restriction: Must be in Psychology program or Social Data Science - Psychology Track; and must have earned a minimum of 85 credits.

PSYC424 Communication and Persuasion (3 Credits)

Effect of social communication upon behavior and attitudes. Theory and research concerning attitude change and social influence.

Prerequisite: PSYC221 and PSYC200.

PSYC425 Psychology and Law (3 Credits)

An introduction to the intersection of psychology and the criminal justice system, known as the field of legal psychology. The material covered will span the course of the criminal justice process and examine each aspect from a psychological perspective beginning with profiling and moving on to eyewitness memory and judgements through perpetrator memories and interrogation techniques. These aspects will be evaluated with a research lens as well as an applied outlook.

Prerequisite: PSYC100, PSYC200, and PSYC300.

Restriction: Must be in Psychology program or Social Data Science - Psychology Track.

Credit Only Granted for: PSYC325 or PSYC425.

PSYC426 Psychology of Adolescents' Close Relationships: Parents, Peers, and Romantic Partners (3 Credits)

An examination of the development of close relationships during adolescence, including those with parents, peers, and romantic partners. We consider core developmental themes including nature and nurture, stability and change, and individual differences, and discuss theory, research, and clinical applications. Students gain observational skills through discussing extensive video examples of social interactions.

Prerequisite: PSYC355; or permission of the instructor.

Credit Only Granted for: PSYC426 or PSYC489B.

Formerly: PSYC489B.

PSYC431 Human and Animal Intelligence (3 Credits)

The study of intelligence touches upon a broad range of topics from cognition, animal behavior, philosophy, psychology, and linguistics. Through lectures, discussions, and critical evaluation of opposing arguments, we will investigate the construct of intelligence from an evolutionary perspective. An understanding of animal intelligence also has important applications for understanding cognition in general, the design of robotic controls, investigating human health, conserving endangered species, development of artificial intelligence, and assuring animal welfare.

Prerequisite: PSYC300.

Credit Only Granted for: PSYC431 or PSYC489R.

Formerly: PSYC489R.

PSYC432 Counseling Psychology: Theories, Research, and Practice (3 Credits)

Analysis of research and intervention strategies developed and used by counseling psychologists. Historical and current trends in content and methodology.

Prerequisite: PSYC200.

PSYC433 Basic Helping Skills: Research and Practice (4 Credits)

Theories and research regarding effective helping relationships, with a focus on applications to counseling and psychotherapy. Students will practice helping skills with each other and will conduct research projects evaluating their helping skills. Students should be willing to talk about personal issues in class. Attendance in labs is mandatory and contributes to the course grade; thus, students should only enroll in a lab section that they will be able to attend consistently.

Prerequisite: PSYC300.

Restriction: Must be in Psychology program; and must have earned a minimum of 85 credits; and must not have completed or be concurrently enrolled in EDCP 310.

Credit Only Granted for: EDCP210, EDCP310, or PSYC433.

PSYC435 Temperament, Personality, and Psychopathology (3 Credits)

An advanced review of cutting-edge research in humans and animals aimed at understanding the psychological and biological mechanisms underlying stable individual differences in temperament and personality (T&P) and determining their role in adult and child psychopathology, with a major focus on anxiety disorders, depression, and addiction. We will discuss the developmental origins of T&P, measurement issues, fundamental dimensions, heritability, relevance to psychopathology and intervention (treatment and prevention), and broader implications for public policy.

Prerequisite: PSYC200.

PSYC436 Introduction to Clinical Psychology: From Science to Practice (3 Credits)

Critical analysis of clinical psychology, with particular emphasis on current developments and trends.

Prerequisite: PSYC300.

PSYC437 The Assessment and Treatment of Addictive Behaviors (3 Credits)

Explores the current research in assessment and treatment of addictive behaviors. Topics may include addictions in the areas of alcohol, drugs, nicotine, gambling, and eating.

Prerequisite: PSYC100; and 9 credits in PSYC courses.

PSYC438 Special Topics in Study Abroad IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

PSYC440 Experimental Psychology: Cognitive Processes and Legal Applications (4 Credits)

A survey of the content, models, and methods in cognitive psychology with an emphasis on attention and encoding, recall, recognition, judgment, signal detection theory, and applying cognitive theories to situations in the legal system. Students integrate scientific theories with real-life legal situations. Course topics include research methodology in assessing and addressing cognitive mechanisms and how this understanding may help eyewitness and victim recall and recognition, perpetrator recall, assessing scientific theories of repression, and real life examples.

Prerequisite: PSYC100, PSYC200, PSYC300 and PSYC341.

Restriction: Must be in Psychology program or Social Data Science - Psychology Track; and must have earned a minimum of 85 credits.

PSYC442 Psychology of Language (3 Credits)

Introductory survey of the psychology of language, focusing on the cognitive processes that enable us to produce and understand language. Topics include speech perception, speech production, syntactic processing, language development, language disorders, and the brain bases of language.

Prerequisite: PSYC300 and PSYC341.

Restriction: Must be in Psychology program.

PSYC447 Diversity in Organizations (3 Credits)

Overview and active discussion of issues related to diversity and discrimination in organizations from several different perspectives, including: the person(s) being stigmatized, the person(s) doing the stigmatizing, the bystander(s) witnessing stigmatization of others, and the organization. Course readings address each of these perspectives, along with an introductory unit that outlines key concepts of diversity.

Prerequisite: PSYC300.

Credit Only Granted for: PSYC489E or PSYC447.

Formerly: PSYC489E.

PSYC450 Applying Psychology to the Workplace: Industrial Organizational Psychology Laboratory (4 Credits)

In this laboratory course, students use data analytic techniques, along with psychology theories and principles, to solve problems and provide recommendations to mock organizations. Along with learning theories in industrial-organizational psychology and statistical analysis, students will improve personal presentation skills that promote effective communication of information.

Prerequisite: PSYC300.

PSYC460 Psychological Foundations of Personnel Selection and Training (3 Credits)

An examination of issues and processes involved in the design and evaluation of personnel selection and training programs in a variety of organizational settings: job, person and organizational analysis; organizational choice; development of predictors; evaluation of instructional and training systems; criteria for performance evaluation, promotion and training.

Prerequisite: PSYC361 and PSYC200.

PSYC464 Psychology of Leaders in Work Organizations (3 Credits)

The psychological assumptions and implications of various theories of management and leadership. Selections and training; development of careers; influence processes; change of managerial behavior; and the impact of the larger environment, nature of product or service, and organization structure on managerial behavior.

Prerequisite: PSYC200 and PSYC361.

PSYC468 Field Experience and Special Assignments in Honors (1-3 Credits)

An individual experience arranged by the honors student and his or her supervisor. A proposal submitted to the honors faculty in the semester preceding registration for the course should state the activities anticipated and the method of evaluation.

Prerequisite: Must have permission of supervisor and honors faculty.

Restriction: Permission of BSOS-Psychology department.

Repeatable to: 6 credits.

PSYC469 Honors Thesis Proposal Preparation (3 Credits)

Development of honors thesis proposal by preliminary research and literature review. Presentation of formal proposal to the thesis committee.

Restriction: Permission of BSOS-Psychology department.

Repeatable to: 3 credits.

PSYC478 Independent Study in Psychology (1-3 Credits)

Restriction: Permission of BSOS-Psychology department; and must have earned a minimum of 9 credits in Psychology; and must have earned a minimum GPA of 3.0 in Psychology; and minimum cumulative GPA of 2.8.

Repeatable to: 9 credits.

PSYC479 Special Research Problems in Psychology (1-3 Credits)

Restriction: Permission of BSOS-Psychology department; and must have earned a minimum of 9 credits in Psychology; and must have earned a minimum GPA of 3.0 in Psychology; and minimum cumulative GPA of 2.8.

Repeatable to: 9 credits.

PSYC488 Advanced Psychology I (Honors) (3 Credits)

Seminar covering topics in sensation, perception, learning, and motivation.

Prerequisite: PSYC200.

Restriction: Permission of BSOS-Psychology department.

PSYC489 Advanced Special Topics in Psychology (3 Credits)

Treatment of a specialized topic in psychology.

Prerequisite: PSYC300.

Repeatable to: 9 credits if content differs.

PSYC498 Advanced Psychology II (Honors) (1 Credit)

Seminar covering topics of current interest in psychology.

Prerequisite: Permission of BSOS-Psychology department.

Repeatable to: 3 credits.

PSYC499 Honors Thesis Research (3 Credits)

Prerequisite: PSYC469; and must have permission of thesis advisor.

PSYC601 Quantitative Methods I (4 Credits)

A basic course in quantitative/mathematical analysis and statistical methods in psychology with an emphasis on conceptual understanding. Topics include issues in measurement, probability theory, statistical inference and hypothesis testing, parameter estimation, bivariate regression, and correlation.

Prerequisite: PSYC200; or students who have taken courses with comparable content may contact the department.

PSYC602 Quantitative Methods II (4 Credits)

A continuation of PSYC 601. Topics include experimental design, analysis of variance, analysis of covariance, multiple regression, and general linear models.

Prerequisite: PSYC601.

PSYC603 Introduction to Industrial and Organizational Psychology (3 Credits)

Advanced survey of industrial-organizational psychology, including selection, training, motivation, group processes, leadership, organizational psychology, and organizational theory. Readings stressed and seminar time will be used for lectures, discussion and integration of the reading materials.

Credit Only Granted for: PSYC603 or PSYC730.

Formerly: PSYC730.

PSYC604 Fundamentals of Social Psychology (3 Credits)

A survey of classic and contemporary theories, research and methods in social psychology.

Credit Only Granted for: PSYC604 or PSYC640.

Formerly: PSYC640.

PSYC605 Multilevel Modeling (3 Credits)

Students are provided with an introduction to multilevel modeling techniques (also termed "hierarchical linear models," "mixed effects models," and "random coefficients models"), with an emphasis on applications. Specific topics that are covered include conceptualization and specification of multilevel models, interpretation of parameter estimates, and application in computer programs using existing datasets. Applications will include a) individuals nested within groups; b) repeated measures/idiographic analysis; c) dyadic studies; d) daily-diary studies; and e) growth-curve modeling. Readings and examples will be drawn from clinical psychology, cognitive psychology, developmental psychology, educational psychology, and social psychology. Students are encouraged to use their own research data for course assignments.

Credit Only Granted for: PSYC798A or PSYC605.

Formerly: PSYC798A.

PSYC606 Human Biopsychology (3 Credits)

An introductory graduate level course in human psychobiology designed for graduate students with little specific training in this area. Introduction to the comparative and evolutionary approach to the study of human behavior, the biobehavioral basis of human sexuality and social behavior, the physiological basis of higher cortical functions in humans including language, memory, and spatial perception, and an introduction to neuropharmacology.

Credit Only Granted for: PSYC606 or PSYC660.

Formerly: PSYC660.

PSYC607 Advanced Topics in Human-Learning and Cognitive Psychology (3 Credits)

A systemic review of major topic areas in the field of human learning and cognition, with emphases on information processes, mental representations, memory, reasoning, problem solving, and language.

Credit Only Granted for: PSYC607 or PSYC671.

Formerly: PSYC671.

PSYC610 Historical Viewpoints and Current Theories in Psychology (3 Credits)

Origins of psychology in philosophy and the sciences; the development of psychology as a science in the nineteenth and twentieth centuries. A review of current theoretical perspectives and research in relation to the enduring issues in psychology. The role of culture, science, and technology in the development of psychological ideas.

Credit Only Granted for: PSYC610 or PSYC688.

Formerly: PSYC688.

PSYC611 Advanced Developmental Psychology (3 Credits)

Systematic exploration of contemporary and classic theories of development focusing on the assumptions they make and research they generate.

PSYC612 Affective Science Perspectives on Temperament & Personality (3 Credits)

Scientific requirements for a personality theory. Postulates and relevant research literature for several current personality theories.

PSYC614 Emotion: From Biological Foundations to Contemporary Debates in the Psychological Sciences (3 Credits)

Multidisciplinary exploration of the current state of our scientific understanding of emotional states and traits, their biological roots, and their relevance to psychiatric disease. We will cover foundational knowledge in neuroscience and genetics, strengths and weaknesses of widely used methods, classic and cutting-edge empirical work, and ongoing conceptual debates. We will also discuss crucial discrepancies between the ways in which scientists and laypeople conceptualize emotions. In addition to human neuroimaging and genomic-association studies, we will explore biological research that affords causal insights, including animal models, acute pharmacological challenges, neurofeedback, and brain stimulation approaches, and case studies of patients with circumscribed neural insults.

PSYC619 Research Team in Clinical Psychology (1-3 Credits)

Participation in ongoing faculty-student research teams focusing on discussion of research topics, presentation and critique of original research proposals, and development of thesis and dissertation research studies.

Repeatable to: 6 credits.

PSYC622 Research Methods in Clinical Psychology (3 Credits)

Examines issues and strategies in conceptual systems, designs and methodologies of current research in clinical and community psychology. Readings include critical analyses of published research. Course requirements include preparation of a research proposal for a thesis level study.

Restriction: Permission of instructor.

Credit Only Granted for: PSYC622 or PSYC718.

Formerly: PSYC718.

PSYC623 Child Development & Psychopathology (3 Credits)

Examines the scientific and clinical literature relevant to developmental aspects of behavior across the lifespan and normal and pathological behavior in children and adolescents. Issues in developmental psychology and developmental psychopathology and consideration of processes initiated in childhood that manifest as pathology in adulthood are also considered.

Restriction: Permission of instructor; and must be in one of the following programs (Psychology (Master's); Psychology (Doctoral)).

PSYC624 Adult Psychopathology (3 Credits)

Examines the scientific and clinical literature relevant to normal and pathological behavior in adults and associated nosological systems for categorizing psychopathology. Issues relevant to etiology, differential diagnosis, and treatment planning are also considered.

Restriction: Permission of instructor; and must be in one of the following programs (Psychology (Master's); Psychology (Doctoral)).

Credit Only Granted for: PSYC624 or PSYC719.

Formerly: PSYC719.

PSYC625 Clinical Assessment: Psychometric Principles, Testing and Behavior (3 Credits)

An examination of fundamental principles of psychological assessment; application of these principles to the development of evidence-based assessments of clinical conditions and associated behaviors; and application of evidence-based assessments to the evaluation and understanding of clinical conditions evaluated and treated in therapeutic settings.

Restriction: Permission of BSOS-Psychology department.

Credit Only Granted for: PSYC625 or PSYC721.

Formerly: PSYC721.

PSYC628 Advanced Topics in Clinical Psychology (1-3 Credits)

Examines selected topics in clinical/community psychology, public policy and health care planning.

Restriction: Permission of instructor.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: PSYC628 or PSYC719.

Formerly: PSYC719.

PSYC629 Clinical Laboratory (1-3 Credits)

Provides advanced supervised experience in the delivery and supervision of mental health interventions targeted to individuals. Supervised work with clients is required.

Repeatable to: 15 credits.

Credit Only Granted for: PSYC629 or PSYC632.

Formerly: PSYC632.

PSYC630 Behavioral and Cognitive Behavioral Intervention for Adults (3 Credits)

Introduces students to the process of therapy with particular focus on behavioral focus on behavioral and cognitive behavioral interventions. Syllabus focuses on theory, research, client diversity, ethics, and practical aspects of conducting therapy.

Prerequisite: PSYC680.

Restriction: Permission of instructor.

Credit Only Granted for: PSYC630 or PSYC728.

Formerly: PSYC728.

PSYC632 Behavioral and Cognitive Behavioral Intervention for Children and Adolescents (3 Credits)

Introduces students to the process of therapy with particular focus on behavioral and cognitive behavioral interventions in children and adolescents. Syllabus focuses on theory, research, client diversity, ethics and practical aspects of conducting therapy.

Restriction: Permission of instructor; and must be in one of the following programs (Psychology (Master's); Psychology (Doctoral)).

Formerly: PSYC789A.

PSYC638 Externship in Professional Psychology (1-3 Credits)

Approved appointment as an extern in a mental health setting.

Repeatable to: 6 credits if content differs.

PSYC639 Internship in Professional Psychology (1 Credit)

This seminar combines involvement with a program approved appointment as an intern in a mental setting with a supervisory review of the training experience.

Repeatable to: 6 credits if content differs.

PSYC642 Biological Considerations in Clinical Psychology (3 Credits)

Behaviors are based partially in the biology of the human organism. This course begins with an examination of the nature-nurture issue on psychology, particularly as it applies to clinical psychology. Genetic underpinnings of behavior their neuroanatomical neurochemical expressions will be explored. This course will also examine psychophysiological measures and the role of psychopharmacology and other biological interventions in treatment.

PSYC643 Ethics and Foundations of Assessment and Clinical Intervention (3 Credits)

An overview of the ethical and professional issues involved in psychological research, instruction, and practice, with special attention to advocacy and ethical decision making regarding a variety of primary, secondary, and tertiary clinical/community interventions.

Restriction: Permission of instructor; and must be in one of the following programs (Psychology (Master's); Psychology (Doctoral)).

Credit Only Granted for: PSYC643 or PSYC719.

Formerly: PSYC719.

PSYC644 Basic Foundation of Clinical Interventions (3 Credits)

General introduction to behavior theory and the basic behavioral principles that underlie behavior therapy. Provides an introduction to the philosophical, theoretical and empirical contributions of basic behavior analysis as they relate to behavior therapy, including examples of how behavior therapy is disconnected from its roots.

Restriction: Permission of instructor; and must be in one of the following programs (Psychology (Master's); Psychology (Doctoral)).

PSYC650 Culture and Diversity in Mental Health (3 Credits)

Review literature regarding the role of culture and diversity in mental health and how culture and diversity are integrated into research and are related to mental health and mental health service utilization. Examine principles and concepts of multicultural and cross-cultural psychology to acquire an increased understanding of diverse underrepresented groups and topics to consider when involved with research and/or clinical work with individuals having diverse backgrounds (e.g., cultures, ethnicities, genders, sexual orientations, and socioeconomic status).

Restriction: Must be enrolled in the Clinical Psychological Science MPS program.

PSYC651 Writing and Critical Thinking (3 Credits)

A capstone experience to integrate knowledge learned throughout the program and improve critical thinking and research writing skills. This will be done through the production of a major research paper in an area relevant to the current or future career goals of the student and by emphasizing critical thinking skills.

Restriction: Must be enrolled in and have successfully completed all courses in the first 4 terms of the Clinical Psychological Science MPS program.

PSYC652 Analytical Thinking: Statistical Methods at Work (3 Credits)

Personal and organizational growth begins with asking and answering great questions. Correspondingly, this course begins with demonstrations of how to translate business questions into research questions.

Statistical methods used to answer business questions are taught first conceptually, then computationally using statistical software. This course emphasizes interpreting results, the regression model, and other issues salient to business research, such as handling large datasets. Students will be provided with a simulated dataset that they will use in learning how to frame and answer business questions using the techniques covered in this course. At the conclusion of this course, students will be required to provide an executive-level presentation on the business question, their findings, and resulting implications.

Additional Information: Students will be taught how to conduct analyses in R, SPSS, SAS, Stata, and excel; students are encouraged to practice analyses on at least two of these programs.

PSYC653 The Business of Evaluation: Research Methods at Work (3 Credits)

Students will learn about the strengths and weaknesses of commonly employed research methods in business settings, including: longitudinal research, survey and interview (including focus groups) design, and sampling and weighting. Students will design and launch a research study that will answer a pressing business question.

Prerequisite: PSYC652.

Additional Information: Course builds from work completed in PSYC 652. Students are also expected to commit to a two-term long project. Students will work with a non-profit organization or local business to ask and answer a business question for the organization. Students will conclude this project in PSYC 654.

PSYC654 Advanced Analytical Thinking: Statistical Methods at Work II (3 Credits)

Students will delve deeply into issues of interpreting and questioning analytic results. Students will learn how to creatively present empirical results in ways that grab the attention of, and are clear to, a variety of stakeholders. Students will present group projects in two presentations, one to the rest of the class (technical audience) and one to an expert panel of practitioners. Finally, this course will introduce students conceptually to a number of advanced statistical methods, such as meta-analysis and structural equation modeling.

Prerequisite: PSYC652 and PSYC653.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC655 Talent Development (3 Credits)

In this course, students will learn how to design and implement effective employee training programs as well as how to encourage informal learning in organizations. This course will review current theories in adult learning (e.g., ADDIE model, action learning, peer feedback/coaching), several popular assessment tools (e.g., MBTI), and best practices for evaluating training programs. Issues relevant to leadership identification and development, including succession planning, will also be covered. As part of this course, students will work in teams to design and deliver a brief training module and practice giving and receiving feedback. Additionally, students will complete, and facilitate a debriefing on, a 360-degree feedback assessment.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC656 Business Fundamentals and Legal Issues facing Organizations (3 Credits)

This course provides an overview of the fundamentals of business, including both issues of finance and legal issues faced by organizations. Topics will include finance, accounting, and marketing. Students will learn core business concepts, about how each major business function enables organizations to run, and how to talk to and understand the leaders of organization. Additionally, this course will provide an overview of common legal challenges organizations face. In addition to introducing students to employment law, this course will review professional ethics standards for IO psychology. This course will use case study methodology to hone students' understanding of the ethical and legal issues faced in day-to-day organizational life.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC657 Managing Strategic Organizational Change (3 Credits)

In this course, students will learn to think about organizations as systems and will explore catalysts of organizational change. Issues of strategy, market pressure, competition, workforce planning, and stakeholder buy-in will be discussed. Finally, students will learn about methods for planning, leveraging, and managing organizational change. Case study methodology will be used to deepen learning on the challenges faced during organizational change and how to guide organizations through change, planned or not.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC660 Performance Management, Compensation, and Benefits (3 Credits)

This course draws together content on organizational behavior, selection, assessment, development, employee relations, and compensation, among other topics. Students in this course will learn about how to align organizational reward systems, including selection, development, performance appraisal, feedback, and compensation systems. This course will pull from current organizational research and theory on issues ranging from work motivation, employee retention, and feedback processes to issues of organizational strategy and culture.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC661 Practicum in IO Psychology (3 Credits)

In this practicum, students will work on IO-related tasks in an organization and will have the opportunity to apply what they have learned in class to real-world problems. Students will write a reflection paper reviewing what skills they have applied - and developed - while completing this practicum.

Prerequisite: PSYC603, PSYC652, PSYC653, and PSYC654.

Restriction: Must be in the Master of Professional Studies in Industrial/Organizational Psychology Program.

PSYC662 Understanding Trauma and Recovery I (3 Credits)

This course is designed to provide students with an overview of psychological trauma and an introduction to treatment of trauma survivors. Current theoretical approaches to understanding trauma and treatment from psychological, developmental, neurobiological, cognitive, and ecological perspectives will be presented.

Restriction: Must be in the Graduate Certificate of Professional Studies in Treating Survivors of Violence, Torture, and Trauma: Theoretical Foundations and Mental Health; or permission of instructor.

PSYC663 Understanding Torture and Trauma I (3 Credits)

The focus of this course is to provide students with an introduction to the psychology of torture survivors. Students will discuss theoretical approaches to understanding of torture, think critically about the context of torture, and understand the psychological, social/familial, spiritual, physical, community, and political implications of torture. Interventions for working with torture survivors will be introduced.

Restriction: Must be in the Graduate Certificate of Professional Studies in Treating Survivors of Violence, Torture, and Trauma: Theoretical Foundations and Mental Health; or permission of instructor.

PSYC664 Understanding Trauma and Recovery II (3 Credits)

This is the second in a series of two courses designed to provide students with an understanding of psychological trauma and treatment of trauma survivors. Current approaches to understanding and treating trauma survivors from psychological, developmental, neurobiological, cognitive, and ecological perspectives will be presented.

Prerequisite: PSYC662.

Restriction: Must be in the Graduate Certificate of Professional Studies in Treating Survivors of Violence, Torture, and Trauma: Theoretical Foundations and Mental Health; or permission of instructor.

PSYC665 Understanding Torture and Trauma II (3 Credits)

This is the second course in a series of two classes focused on theory, research, and psychological interventions related to the treatment of survivors of torture and trauma. Current approaches to treatment of torture survivors, as well as psychological, social/familial, spiritual, physical, community, and political implications of torture will be introduced.

Prerequisite: PSYC663.

Restriction: Must be in the Graduate Certificate of Professional Studies in Treating Survivors of Violence, Torture, and Trauma: Theoretical Foundations and Mental Health; or permission of instructor.

PSYC669 Professional Issues in Counseling Psychology (1 Credit)

Introduction to counseling psychology, including history and development of the field, and current professional and scientific issues. Exploration of career, research, and professional development opportunities.

Prerequisite: Must be in the Counseling Psychology program.

Cross-listed with: EDCP669.

Repeatable to: 3 credits if content differs.

Formerly: EDCP695.

PSYC672 Introduction to Addiction and Co-occurring Conditions (3 Credits)

An in-depth overview of the range of addictive behaviors and the psychological conditions that often co-occur and complicate the presentation and course of addictive behaviors.

Restriction: This course is reserved for students enrolled in the Graduate Certificate Program in Addiction Science and Intervention.

PSYC678 Seminar in Psycholinguistics (3 Credits)

Contemporary psycholinguistic theories of language acquisition and use. Phonological, semantic and syntactic aspects of language.

Prerequisite: PSYC671.

Repeatable to: 6 credits.

PSYC679 Seminar in Cognitive Development (3 Credits)

Advanced coverage of research methodology and research issues in various areas of cognitive development such as categorization, spatial understanding, language acquisition, and memory. Emphasis on interrelationships among developmental changes across the life-span. Utility of a developmental perspective in analyzing the components of cognition.

Prerequisite: PSYC611 or PSYC671.

Repeatable to: 6 credits.

PSYC682 Counseling Psychology Didactic Practicum in Group Interventions (3 Credits)

In depth examination of theories and techniques of group interventions; supervised experience in group counseling.

Prerequisite: For Counseling Psychology majors only.

Cross-listed with: EDCP682.

Formerly: EDCP718.

PSYC683 Counseling Psychology Didactic-Practicum in Couples and Family Interventions (3 Credits)

In depth examination of theories and techniques of couples and family counseling, and supervised experience in couples/family counseling.

Restriction: Permission of instructor.

Credit Only Granted for: PSYC683 or PSYC729.

Formerly: PSYC729.

PSYC685 Counseling Psychology Didactic Practicum in Counseling Supervision (3 Credits)

In depth examination of theories and techniques of counseling supervision, supervised experience in the process of supervising counselors.

Cross-listed with: EDCP685.

Restriction: Must be in the Counseling Psychology program.

Formerly: EDCP745.

PSYC686 Didactic Practicum in Career Counseling (3 Credits)

In depth examination of approaches to issues in career interventions; supervised experience in career counseling and assessment.

Credit Only Granted for: PSYC681 or PSYC686.

Formerly: PSYC681.

PSYC688 Ethical and Legal Issues in Counseling Psychology (1 Credit)

Exploration of ethical standards and legal issues in the profession of counseling psychology.

Restriction: Must be in the Counseling Psychology program.

Repeatable to: 3 credits if content differs.

PSYC689 Seminar in Counseling Psychology (3 Credits)

Special topics in counseling psychology. Examples of topics include multicultural counseling, the counseling relationship, counseling and victimology, psychology treatment and health.

Prerequisite: For Counseling Psychology majors only.

Cross-listed with: EDCP689.

Repeatable to: 12 credits if content differs.

Formerly: EDCP789.

PSYC690 Research in Counseling Psychology I (3 Credits)

Critical analysis of strategies, methodological, conceptual, and content trends.

Prerequisite: For Counseling Psychology majors only.

Cross-listed with: EDCP690.

Formerly: EDCP778.

PSYC691 Research in Counseling Psychology II (3 Credits)

Critical analysis of trends and issues in counseling psychology science.

Restriction: Permission of instructor.

Credit Only Granted for: PSYC691 or PSYC718.

Formerly: PSYC718.

PSYC692 Assessment in Counseling Psychology I (3 Credits)

Broad introduction to the construction of psychological tests and measures, and experience in test interpretation, with consideration of historical, legal, ethical, and cultural issues surrounding the assessment process.

Prerequisite: PSYC680.

Credit Only Granted for: PSYC692 or PSYC721.

Formerly: PSYC721.

PSYC693 Assessment in Counseling Psychology II (3 Credits)

Supervised experience in administration, scoring, and interpreting major psychodiagnostic instruments used by counseling psychologists, as well as writing integrative assessment reports. Emphasis on hypothesis testing approach to assessment and on the counseling interview as an assessment tool.

Prerequisite: PSYC692.

Credit Only Granted for: PSYC693 or PSYC722.

Formerly: PSYC722.

PSYC695 Ethical and Professional Issues in Counseling Psychology (3 Credits)

Exploration of ethical and professional issues in Counseling Psychology.

Restriction: Must be in the Counseling Psychology program. Also offered as: EDCP695.

Credit Only Granted for: EDCP669, EDCP688, EDCP695, PSYC688, or PSYC695.

Formerly: EDCP669 and EDCP688.

PSYC698 Advanced Didactic Practicum in Counseling Psychology (3 Credits)

In depth examination of approaches to or theories about intervention, and supervised experience in the application of those approaches or theories. Each practicum focuses on a particular approach, e.g., psychodynamic, cognitive-behavioral, cross-cultural.

Prerequisite: For Counseling Psychology majors only.

Cross-listed with: EDCP698.

Repeatable to: 12 credits if content differs.

Formerly: EDCP776.

PSYC699 Diversity and Multiculturalism in Counseling Psychology (1 Credit)

Exploration of knowledge, attitudes, and skills for providing counseling psychological services to culturally diverse populations.

Restriction: Must be in the Counseling Psychology program.

Repeatable to: 3 credits if content differs.

Formerly: EDCP696.

PSYC700 Theories and Strategies of Counseling Psychology (3 Credits)

Introduction to the professional field, examination of pertinent scientific and philosophical backgrounds, and survey of the major theories, principles, and training models in counseling. Correlated laboratory analogue experiences in dyadic and group interrelationships.

Prerequisite: For Counseling Psychology majors only.

Cross-listed with: EDCP700.

Formerly: EDCP789J.

PSYC707 Theory of Decision and Choice (3 Credits)

A study of algebraic and probabilistic models for decision and choice behavior, and related experimental procedures. Topics include: measurement of preference, subjective utility models for certain and uncertain outcomes, normative strategies, decision making styles, and group decision making.

Prerequisite: PSYC602.

Restriction: Permission of instructor.

PSYC708 Seminar in Psychometric Theory (3 Credits)

Study of the current practices, trends, or recent developments in psychometric theory.

Prerequisite: PSYC602; or permission of instructor.

Repeatable to: 9 credits if content differs.

PSYC709 Seminar in Mathematical Models (3 Credits)

Special topics in mathematical psychology. A discussion of quantitative representations of psychological processes in one or more substantive areas of psychology.

Prerequisite: PSYC602; or permission of instructor.

Repeatable to: 9 credits if content differs.

PSYC725 Teams at Work (3 Credits)

Theory and research regarding the formation, management, and functioning of teams in the workplace; including team composition, team rewards, team-task and team-organization relationships and fit, team productivity, and the selection for and training of teams. International use of teams at work.

Prerequisite: PSYC602; or permission of instructor.

Credit Only Granted for: PSYC725 or PSYC747.

Formerly: PSYC747.

PSYC732 Selection and Classification Issues in Organizations (3 Credits)

Consideration of societal, organizational and individual demands for appropriate use of individual differences in (primarily) initial placement of employees. Recruitment, and selection issues, the role of governmental regulations, and the role of individual factors in individual behavior are considered. Extensive coverage given to fundamental psychometric problems and the development of individual and organizational criteria of effectiveness.

Prerequisite: PSYC603; and (PSYC602; or students who have taken courses with comparable content may contact the department). Or permission of instructor.

PSYC737 Research Methods for Social and Organizational Psychology (3 Credits)

Conducting and evaluating research are among the most important activities undertaken in social and organizational psychology. Effectively accomplishing these tasks requires understanding fundamental principles and practices relevant to theory development (constructing and improving explanatory accounts for phenomena), research design (techniques and methods used to collect observations/data), and measurement (processes and techniques by which observations are assessed, quantified, and documented). This course aims to develop the requisite knowledge and critical thinking skills necessary to make informed decisions when performing and interpreting research in social and organizational psychology. Significant emphasis is placed on developing student thesis research and proposals.

Prerequisite: PSYC603 or PSYC604; or permission of instructor.

PSYC738 Seminar in Industrial/Organizational Psychology (3 Credits)

An occasional advanced seminar covering specialized topics.

Prerequisite: PSYC603; or permission of instructor.

Repeatable to: 99 credits if content differs.

PSYC739 The Psychology of Workplace Change and Innovation (3 Credits)

Organizational change and innovation research and theory, current impetuses for organizational change (e.g., economic, demographic, and technological trends) and specific workplace innovations (e.g., employee ownership, QWL, CAD/CAM, etc.)

Prerequisite: PSYC603; or permission of instructor.

PSYC748 Seminar in Social Psychology (3 Credits)

A seminar on selected topics in social psychology.

Repeatable to: 15 credits if content differs.

PSYC749 Current Research in Social Psychology (1-3 Credits)

Repeatable to: 12 credits if content differs.

PSYC757 Developmental Cognitive Neuroscience (3 Credits)

Developmental cognitive neuroscience investigates the relations between neural and cognitive development. This course provides an overview of current research questions, methodologies and findings related to neurocognitive development in human infants and children, the role of developmental plasticity, and atypical outcomes, such as those observed in neurodevelopmental disorders.

Restriction: Must be in one of the following programs (Psychology (Master's); Psychology (Doctoral); Neurosciences and Cognitive Sciences (Doctoral)); or permission of BSOS-Psychology department.

Credit Only Granted for: NACST728D or PSYC757.

PSYC758 Seminar in the Neural Bases of Sensory Processes (3 Credits)

Selected topics in vision and the other senses.

Prerequisite: PSYC605; or permission of instructor.

Repeatable to: 9 credits if content differs.

PSYC759 Seminar in Neural Bases of Perceptual Processes (3 Credits)

Selected topics in perceptual phenomena and their physiological bases.

Prerequisite: PSYC605; or permission of instructor.

Repeatable to: 9 credits if content differs.

PSYC764 Comparative Neuroanatomy (3 Credits)

Demonstrations and lectures on the gross, microscopic and ultrastructural morphology of the central nervous system of vertebrates.

Restriction: Permission of instructor.

PSYC768 Conditioning and Learning (3 Credits)

Alternate years. The literature on the experimental analysis of behavior, with examination of basic experiments and contemporary theories related to them.

Prerequisite: PSYC622.

PSYC778 Seminar in Learning and Memory (3 Credits)

An advanced topical seminar covering the areas of human learning and memory. Acquisition processes, storage and retrieval processes, and attention and information processing.

Prerequisite: PSYC671.

Repeatable to: 6 credits if content differs.

PSYC779 Seminar in Human Performance Theory (3 Credits)

An examination of human-machine interactions with emphasis on theories and research which focus on human performance capabilities and skills. Topics selected from information processing, communications, human computer interaction, decision making, environmental constraints and automation.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

Formerly: PSYC735.

PSYC788 Special Research Problems (1-4 Credits)

Supervised research on problems selected from the areas of experimental, industrial, social, quantitative, or mental health psychology.

PSYC789 Special Research Problems (1-4 Credits)**PSYC798 Graduate Seminar (1-4 Credits)**

Repeatable to: 12 credits if content differs.

PSYC799 Master's Thesis Research (1-6 Credits)**PSYC818 Research Issues in Personality Or Development (3 Credits)**

Experimental design and methodology and statistical treatment of data appropriate to personality or developmental research; critical analysis of major current areas of research including methodologies, findings and implications. The course will focus on either personality research or developmental research in a given semester.

Prerequisite: PSYC602 and PSYC601. And PSYC611 or PSYC612; or students who have taken courses with comparable content may contact the department.

Repeatable to: 9 credits.

PSYC819 Seminar in Personality and Development (3 Credits)

An advanced seminar covering specialized topics.

Repeatable to: 9 credits.

PSYC859 Special Topics in Perception (3 Credits)

Intensive study of selected topics in perception.

Prerequisite: PSYC605; or permission of instructor.

Repeatable to: 6 credits.

PSYC878 Current Research in Language and Cognition (3 Credits)

Seminar will cover current research and methodological issues in language and cognition. Specialized topics include: computer models of cognitive behavior; cross-cultural studies in language and thought; mathematical and analytical techniques for assessing structures; and others.

Prerequisite: PSYC671.

Repeatable to: 6 credits.

PSYC888 Research Methods in Psychology (1-3 Credits)**PSYC889 Research Methods in Psychology (1-3 Credits)****PSYC898 Pre-Candidacy Research (1-8 Credits)****PSYC899 Doctoral Dissertation Research (1-8 Credits)**

PUAF - Public Policy

RDEV - Real Estate Development

RDEV410 Legal Foundations of Real Estate (3 Credits)

Provides students with the chance to explore various legal topics related to real estate, including government regulation, rights of property owners, financing real estate purchases, protections for certain classes of people, elements of a real estate contract, title, insurance, taxation, rights of landlords and tenants, premises liability, urban planning, land use regulation, and environmental issues.

Prerequisite: RDEV250 and RDEV350.

Restriction: Must be in the Real Estate and the Built Environment major; and permission of ARCH-Real Estate Development.

RDEV415 Principles, Process and Politics of Planning for Real Estate Development (3 Credits)

Designed to introduce and familiarize students with planning and zoning and the associated processes and requirements that impact the real property development process and products. It will look at the roles the community and politics play in shaping the built environment and the development process.

Prerequisite: RDEV250 and RDEV350.

Restriction: Permission of ARCH-Real Estate Development.

RDEV445 Essentials of Architectural Design and Construction Management for Real Estate Professionals (3 Credits)

Essential terminology, process and substantive knowledge needed by development professionals to effectively move a project through the design and construction process; includes environmental and ethical considerations throughout the process.

Restriction: Permission of ARCH-Real Estate Development.

RDEV450 Foundations of Real Estate Finance and Investment (3 Credits)

Real Estate Finance and Investment addresses how real estate value is established, the fundamental foundations of the time value of money, as well as more real estate specific applications of return on investment, net operating income, the components of a real estate sources and uses statement, sources of real estate equity and debt financing, commonly used debt ratios and equity returns in real estate, as well as concepts of sensitivity analysis and exit strategies.

Prerequisite: Must have completed RDEV270 or an approved accounting course with a grade of C- or better; and minimum grade of C- in RDEV350.

Restriction: Must be enrolled in RDEV Minor; and permission of ARCH-School of Architecture, Planning, & Preservation.

RDEV470 Real Estate Development Case Studies (3 Credits)

Real Estate Development Case Studies takes the principles learned in RDEV 250, 350 and 450 and takes an in depth look at a selection of local, national and international case studies in residential, commercial office, retail and hospital and critically analyzes the success and failure, short term and long term of the projects.

Prerequisite: RDEV450.

Restriction: Must be in the Real Estate and the Built Environment major or Real Estate Development minor; and permission of ARCH-Real Estate Development.

RDEV473 Real Estate Case Study Competition (3 Credits)

The Colvin Institute of Real Estate Development hosts a case study competition. The Colvin Case Study Challenge is a national intercollegiate real estate case study competition for full or part-time students enrolled in a college or a university real estate program (undergraduate or graduate or a university sanctioned real estate club/organization). The Challenge is to document a recent innovative real estate project within the team's metropolitan region. Unlike many other case competitions, this is a post-development report and documentation of a recently completed project (or project phase). The Challenge is designed to hone professional skills and reveal the knowledge base and understanding of markets, project valuation, finance, urban design and sustainability, entitlement processes and operational issues. This course prepares students to participate in the competition.

Prerequisite: RDEV250, RDEV350, and RDEV450.

Restriction: Must be in the Real Estate and the Built Environment major; and permission of ARCH-Real Estate Development.

RDEV478 Special Topics in Real Property Development (1-3 Credits)

RDEV 478 will address one or more current topics in real property with a focus in one or more of the areas of real estate development from planning and entitlements, to design and construction, to market analysis and valuation, to finance and investment, to operations and property management, or social and economic impacts.

Recommended: RDEV250, RDEV350, and RDEV450.

Restriction: Permission of ARCH-School of Architecture, Planning, & Preservation.

Repeatable to: 6 credits if content differs.

RDEV600 Principles and Practice of Real Property Development (3 Credits)

An introduction to basic principles of real estate development: How real estate and communities get built and how value is created. The emphasis is on entrepreneurship and an experiential learning approach to the entrepreneurial real estate development process, principles, and practice.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688T or RDEV600.

Formerly: RDEV688T.

RDEV603 Introduction to Real Property Finance (3 Credits)

Introduction to Real Property Finance addresses how real estate value is established, the fundamental foundations of the time value of money, as well as more real estate specific applications of return on investment, net operating income, the components of a real estate sources and uses statement, sources of real estate equity and debt financing, commonly used debt ratios and equity returns in real estate, as well as concepts of sensitivity analysis and exit strategies.

Restriction: Permission of the Department.

Credit Only Granted for: RDEV688Z, RDEV689V, or RDEV603.

Formerly: RDEV688Z and RDEV689V.

RDEV605 Tax and Accounting for Real Property Developers (3 Credits)

This course is designed to familiarize students with taxation and accounting as it pertains to real estate development.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688K or RDEV605.

Formerly: RDEV688K.

RDEV610 Real Property Development Law and Ethics (3 Credits)

Presents foundational knowledge about real property, contracts, administrative and constitutional law, and ethical principals and reasoning skills.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688A or RDEV610.

Formerly: RDEV688A.

RDEV615 Principles, Process and Politics of Planning for Real Property Development (3 Credits)

Designed to introduce and familiarize students with planning and zoning and the associated processes and requirements that impact the real property development process and products. It will look at the roles the community and politics play in shaping the built environment and the development process.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688G or RDEV615.

Formerly: RDEV688G.

RDEV620 Market Analysis for Real Property Development (3 Credits)

Designed to introduce and familiarize students with completing market analysis for real property projects. Includes a broad range of land uses including for-rent and for-sale residential, retail, office, and hospitality.

Covers all aspects of completing a market analysis from the site visit to recommendations, and all the steps in-between. Examines how various real estate practitioners, such as developers, builders, investors, landowners, and public officials, utilize market studies.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV689M or RDEV620.

Formerly: RDEV689M.

RDEV630 Real Property Finance and Investment (3 Credits)

This course is designed to introduce students who have experience in real estate finance or have taken an introductory course in real estate finance and investment to move to this intermediate course that addresses foundational concepts of commercial real estate finance and the measures used in analyzing and evaluating real estate projects. Quantitative analysis and financial modeling comprise the main focus.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV630, RDEV688B, or URSP664.

Formerly: RDEV688B.

RDEV635 Capital Markets and Real Estate Investments for Developers (3 Credits)

An advanced course in real estate finance focusing on capital markets and complex financing mechanism in the public and private markets for raising capital for development of public, private and public/private projects.

Prerequisite: RDEV630, URSP664, or RDEV688.

Restriction: Must be in Real Estate Development (Master's) program; or permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV635 or RDEV688F.

Formerly: RDEV688F.

RDEV640 Principles of Urban Design for Real Property Developers (3 Credits)

Introduces students to the design issues associated with development of the basic real property asset classes (office, retail, and residential) and the context driven forces that shape these different development types. Also introduces non-design students to the principles of visual literacy and the capacity of different property to support development in the effort to enhance a community.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688J or RDEV640.

Formerly: RDEV688J.

RDEV650 Essentials of Design and Construction Management for Development Professionals (3 Credits)

Essential terminology, process and substantive knowledge needed by development professionals to effectively move a project through the design and construction process; includes environmental and ethical considerations throughout the process.

Restriction: Must be in Real Estate Development (Master's) program; or permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV650 or RDEV688C.

Formerly: RDEV688C.

RDEV660 Commercial Leasing for Real Property Developers (3 Credits)

Provides students with a hands-on look at commercial and real estate leases, lease provisions, and current market activity, a key factor in determining when and whether to proceed with developing a commercial property.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688L or RDEV660.

Formerly: RDEV688L.

RDEV670 Negotiating Agreements & Resolving Conflicts when Developing Real Property (3 Credits)

Designed to develop students' negotiation and leadership skills for managing differences between individuals and groups while in the process of developing and operating real property. Includes a blend of skill-building exercises and theory discussions about the behavior of individuals to understand negotiation dynamics.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688E or RDEV670.

Formerly: RDEV688E.

RDEV688 Selected Topics in Real Estate Development (3 Credits)

Selected topics in real estate development.

Prerequisite: Permission of ARCH-Real Estate Development.

Repeatable to: 8 credits if content differs.

RDEV689 Current Topics in Real Estate Development (1-3 Credits)

Explores a focused aspect in any of the five major phases of real estate development: planning, finance, law, design, construction, or management.

RDEV690 Capstone Project: Real Property Feasibility Study (3 Credits)

The capstone course is designed to provide students with an opportunity to apply acquired classroom knowledge to real world conditions. Each student in the class will work separately to create a development proposal and feasibility study for an assigned property. For students doing a feasibility study of a development the study will address at least market analysis, entitlement process, construction, and financing for the project.

Prerequisite: Completion of at least 7 RDEV courses.

Restriction: Permission of ARCH-Real Estate Development.

Credit Only Granted for: RDEV688I or RDEV690.

Formerly: RDEV688I.

RELS - Religious Studies

RELS408 Capstone Seminar for Religions of the Ancient Middle East (3 Credits)

A capstone seminar for majors in Religions of the Ancient Middle East, designed to provide the intellectual framework for a substantial, interdisciplinary research project. Course topics will be thematic and students will be encouraged to explore comparative or interdisciplinary approaches.

Repeatable to: 6 credits if content differs.

RELS419 Advanced Topics in Religious Studies (3 Credits)

The contemporary study of religion in which topics may address specific religious traditions, regional or historical developments, or methodological and theoretical issues.

Recommended: RELS216.

Repeatable to: 9 credits if content differs.

RELS427 The Epic of Gilgamesh (3 Credits)

One of the most famous tales from the ancient world, the Epic of Gilgamesh inspires readers with tales of friendship and loss, mortality, and the search for meaning. The story itself grew and changed over time and took on new meanings. Through study of the epic, its development over time, and the sources it drew from, this class will examine the meaning of the Gilgamesh epic and its impact on ancient Mesopotamian culture.

Prerequisite: JWST225, RELS225, HIST219I, or permission of the instructor.

Recommended: JWST262, ENGL262, or HEBR298B.

Cross-listed with: JWST427.

Credit Only Granted for: JWST419G, RELS419G, RELS427 or JWST427.

Formerly: JWST419G.

RELS429 Advanced Topics in Religious History (3 Credits)

Advanced study of religious history in a particular setting, with attention to particular themes, texts, events, or communities.

Recommended: RELS216 or RELS289.

Repeatable to: 9 credits if content differs.

RELS430 Dead Sea Scrolls (3 Credits)

A study of the Dead Sea Scrolls in their ancient and modern settings, and in terms of contemporary scholarly interpretations of their meaning. Interpretations of the historical significance of these documents, their connections to ancient Jewish sectarian movements, and their implications for our understanding of Judaism, Christianity, and the history of the Bible.

Prerequisite: Must have completed one JWST course or one RELS course; or permission of ARHU-Meyerhoff Program & Center for Jewish Studies. Cross-listed with JWST430.

Credit Only Granted for: JWST430 or RELS430.

RELS439 Advanced Topics in Religious Thought (3 Credits)

Advanced study of religious thought in a particular setting, with attention to particular themes, texts, events, or communities.

Recommended: RELS216 or RELS289.

Repeatable to: 9 credits if content differs.

RELS488 Honors Thesis Research in Religions of the Ancient Middle East (3 Credits)

Guided research on a thesis under the supervision of a faculty mentor.

Repeatable to: 6 credits if content differs.

RELS499 Independent Study in Religious Studies (1-3 Credits)

An advanced independent research project for qualified students, supervised by a faculty member, on a topic not ordinarily covered in available courses.

Prerequisite: Permission of ARHU-Meyerhoff Program & Center for Jewish Studies.

Repeatable to: 6 credits if content differs.

RELS600 Methods and Theories in the Study of Religion (3 Credits)

An exploration of scholarly approaches to the study of religion. The modern history of the secular study of religion, social dynamics, textual formations, and ritual practices. Jointly offered with RELS400.

Credit Only Granted for: RELS400, RELS419 T, RELS600, or RELS619T.

Formerly: RELS619T.

RELS619 Directed Readings in Religious Studies (3 Credits)

Individual Instruction course.

Repeatable to: 6 credits if content differs.

RELX - Religious Studies Education Abroad

RELX101 Religion in a Pluralistic World (3 Credits)

Examines the issue of religious pluralism, explores the relationship between religious truth and (in)tolerance, and examines how different religious traditions treat religious truth claims in regard to the social and political context in which they operate. Examines the interferences between the religious and the socio-political realm, both historically and in the context of the contemporary world.

Credit Only Granted for: RELS269F or RELX101.

Formerly: RELS269F.

Additional Information: This course is offered as part of the Maryland-in-Rome study abroad program. Students must apply for this program through Education Abroad: More information at ter.ps/UMRome.

Education Abroad processes registrations for this course on behalf of students.

RUSS - Russian

RUSS401 Advanced Russian Composition (3 Credits)

Approaches to argumentation, organization of information, contextualized grammar, appropriateness of lexical choice, genre, and register.

Prerequisite: RUSS302; or students who have taken courses with comparable content may contact the department.

Restriction: Not open to native speakers of Russian.

RUSS402 Practicum in Written Russian (3 Credits)

Designed to improve comprehension of functional varieties of written Russian and develop ability to present in written form concise syntheses of source texts.

Prerequisite: RUSS401; or students who have taken courses with comparable content may contact the department.

RUSS403 Russian Conversation: Advanced Skills (3 Credits)

Advanced spoken production of high-level, abstract language.

Prerequisite: RUSS303; or students who have taken courses with comparable content may contact the department.

RUSS404 Practicum in Spoken Russian (3 Credits)

To improve comprehension of rapidly spoken Russian of various functional styles and to develop ability to synthesize orally the content of spoken material.

Prerequisite: RUSS403; or students who have taken courses with comparable content may contact the department.

RUSS405 Russian-English Translation I (3 Credits)

Introduction to the principles of translation of a particular genre, and is typically diplomatic, business, or literary.

Prerequisite: Must have completed or be concurrently enrolled in RUSS302.

RUSS409 Selected Topics in Russian Language Study (3 Credits)

Presentation of a topic in Russian language study.

Restriction: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

RUSS411 Linguistic Analysis of Russian I (3 Credits)

Elucidation of theoretical concepts of modern linguistics through the analysis of problematic concepts in the Russian linguistic system. Phonology and the syntax of the simple sentence.

Prerequisite: Must have completed or be concurrently enrolled in RUSS301.

RUSS439 Selected Topics in Russian Literature (3 Credits)

Presentation of a topic in Russian literature.

Restriction: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

RUSS499 Independent Study in Russian (1-3 Credits)

Independent study under faculty supervision.

Prerequisite: Permission of instructor.

Repeatable to: 6 credits if content differs.

RUSS618 Special Topics in Linguistic Analysis of Russian (3 Credits)

Aspects of Russian linguistics such as stress, verbal, tense, taste, word order, or problems in lexical semantics.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

RUSS619 Seminar in Linguistic Analysis of Russian (3 Credits)

Current research in Russian linguistic analysis.

Prerequisite: RUSS610; and (RUSS612, RUSS611, or RUSS613).

Repeatable to: 6 credits if content differs.

RUSS673 History of the Russian Language (3 Credits)

Introduction to historical Russian grammar and phonological developments in Russian.

Prerequisite: SLAV475.

RUSS679 Special Topics in Slavic Linguistics (3 Credits)

Topics concerning contrastive, historical, and dialectical Slavic linguistics, in relation to our understanding of grammatical theory.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

RUSS798 Independent Study (1-3 Credits)

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

RUSS799 Thesis Research (1-6 Credits)

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 6 credits if content differs.

SLAA - Second Language Acquisition and Application

SLAA410 Second Language Acquisition: Theory, Research, and Practice (3 Credits)

Introduces vibrant and expanding branch of language science and cognitive science: theory, research and practice in SLA. Students apply what they learn to practical issues ranging from learning languages as an adult to societal problems involving second languages and dialects.

Prerequisite: LING200, LING240, PSYC200, PSYC221, or PSYC354.

SLAA498 Second Language Research and Practicum (1-3 Credits)

Individualized research and practicum for undergraduate students to work as Undergraduate Research Assistants (UGRA) on existing projects under the supervision of a PhD Graduate Supervisor (GS) in the area of second language acquisition to learn/experience how second language as well as psycholinguistic research is conducted.

Restriction: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 9 credits if content differs.

Additional Information: UGRAs register for 1-3 credits. A specific weekly schedule will be determined at the beginning of the semester. Throughout the semester, students will meet with the Graduate Supervisor (GS) once per week to discuss the theoretical and methodological background of the project as well as the broader area behind the research. In addition to the training in theoretical background, the first several weeks of the semester will be devoted to hands-on details of running subjects using a particular method and analyzing data. When this training is complete, UGRAs will work more independently to schedule and run research projects and process the data.

SLAA610 Research and Theories in Second Language Acquisition (3 Credits)

Introduction to current theories and research findings Second Language Acquisition (SLA).

SLAA611 Fundamentals of Foreign Language Acquisition and Instruction (3 Credits)

Introduction to theoretical and practical issues relevant to foreign language learning, language acquisition, and curriculum construction.

SLAA620 Second Language Research Methodologies (3 Credits)

An exploration of research methodology in second language acquisition (SLA), with a focus on developing practical skills in data analysis and interpretation. Preparation in both critical evaluation of existing research and design of new research models.

Prerequisite: SLAA610; and must have completed or be concurrently enrolled in SLAA611.

SLAA629 Special Topics in Sociolinguistics (3 Credits)

Current topics in research in sociolinguistics.

Repeatable to: 9 credits if content differs.

SLAA630 Second Language Testing (3 Credits)

An introduction to basic concepts in the assessment of second language knowledge. Issues of reliability, dependability, construct validity, utility, and washback on instruction are examined.

Prerequisite: SLAA610; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SLAA639 Special Topics in Applied Linguistics (3 Credits)

Current topics in research in applied linguistics.

Repeatable to: 9 credits if content differs.

SLAA640 Psycholinguistics (3 Credits)

An introduction to the field of psycholinguistics that covers speech perception, word recognition, sentence and discourse processing, speech production, and language acquisition. Basic concepts, research methods, major research topics, leading theories and related research findings, with implications of psycholinguistic theories and findings for second language studies.

Prerequisite: SLAA610; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SLAA649 Special Topics in Second Language Acquisition (3 Credits)

Current topics in research in second language acquisition.

Repeatable to: 9 credits if content differs.

SLAA650 Second Language Analysis (3 Credits)

An overview of the field of linguistics with a particular attention to its application in SLA studies, introduces students to the basic concepts and skills related to the scientific study of language, and provides them with opportunities to apply these concepts and skills in the analysis of language. It covers topics such as phonetics, phonology, morphology, syntax, semantics, language acquisition, and language use.

Prerequisite: SLAA610; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SLAA719 Second Language Acquisition and Application Internship (3 Credits)

Internship at a site to be determined. Topics may include heritage language learning, immersion education, testing and assessment, translation and interpretation, and national language planning and policy.

Repeatable to: 6 credits if content differs.

SLAA741 Cognitive Processes in Second Language Learning (3 Credits)

Examines the roles played by varied types of learning processes and memory, general processing issues, and the cognitive bases of individual differences in learning and processing a second language.

Prerequisite: SLAA610; or students who have taken courses with comparable content may contact the department.

SLAA742 Second Language Processing (3 Credits)

Covers leading theoretical approaches and experimental methods in second language processing. Draws on research and theories in Second Language Acquisition (SLA), formal linguistics, cognitive grammar, psycholinguistics, and neurolinguistics.

Restriction: Permission of instructor required for MA students.

SLAA744 Age Effects in Second Language Learning (3 Credits)

Consideration of the empirical evidence for age effects in second language learning and its potential confounds. Critical evaluation of the differing interpretations of these effects and their implications for educational practice, SLA theory, development psychology, and research methodology.

Prerequisite: SLAA610.

Restriction: Permission of instructor.

SLAA749 Special Topics in Second Language Learning (3 Credits)

Current topics in research on Second Language Learning.

Prerequisite: SLAA610; or permission of instructor.

SLAA750 Instructed Second Language Acquisition (3 Credits)

Survey of studies on effectiveness of SLA instruction within various domains of language, with focus on research design.

Prerequisite: SLAA610.

SLAA754 Task-Based Language Teaching (3 Credits)

Overview of Task-Based Language Teaching (TBLT) including needs and means analysis, syllabus design, materials writing, methodology and pedagogy, testing, and evaluation. Theoretical issues addressed include relationship of TBLT to research findings on the psychology of learning and SLA and libertarian approaches to education.

SLAA759 Special Topics in Second Language Instruction (3 Credits)

Topics in the theory and practice of second language instruction.

Repeatable to: 12 credits.

SLAA760 Fundamentals of Second Language Assessment (3 Credits)

An overview of current assessment models in foreign and second language learning.

Prerequisite: SLAA610.

SLAA772 Bilingualism and Multilingualism (3 Credits)

Critical exploration of concepts in bilingualism and multilingualism with emphasis on the social environments of second language acquisition, through the lens of cognitive and social frameworks. Implications of bilingualism for memory, affect, language processing and code-switching/mixing, as well as the social implications of knowing and using more than one language.

Prerequisite: SLAA610; or permission of instructor.

SLAA773 The Heritage Language Speaker (3 Credits)

Critical exploration of the theoretical issues and existing experimental research on heritage language learning and use as well as consideration of classroom and curricular implications of heritage language learning.

Restriction: Permission of instructor required for Master students.

SLAA779 Directed Research in Second Language Acquisition and Application (1-3 Credits)

Directed independent research in Second Language Acquisition or Application. In this capstone project, students engage in independent research under faculty direction.

Repeatable to: 3 credits if content differs.

SLAA798 Master's Independent Study (1-3 Credits)

Repeatable to: 6 credits if content differs.

SLAA799 Master's Thesis Research (1-6 Credits)**SLAA888 Doctoral Independent Study (1-3 Credits)**

Individual instruction course.

Prerequisite: Permission of ARHU-College of Arts & Humanities.

Repeatable to: 9 credits if content differs.

SLAA898 Pre-Candidacy Research (1-8 Credits)**SLAA899 Doctoral Dissertation Research (1-8 Credits)**

SLLC - School of Languages, Literatures and Cultures

SLLC400 Articulatory Phonetics for Second Language Acquisition and Application (3 Credits)

The mechanical capabilities of the human vocal apparatus for producing speech sounds, and their terminology and transcription in the International Phonetic Alphabet. Emphasis is on the practical needs of the teacher and student of foreign language, rather than the theoretical linguist or the hearing-and-speech pathologist. The phonetics of major languages are also introduced, with attention to the pedagogy of their phonetics.

Restriction: Junior standing or higher.

Credit Only Granted for: SLLC400.

SLLC410 Documentary and Narrative (3 Credits)

An examination of the relationship between film and reality, focusing on documentary film.

Prerequisite: ENGL245, FILM245, or CINE245; or permission of ARHU-School of Languages, Literatures, and Cultures department.

Cross-listed with: CINE410.

Credit Only Granted for: SLLC410, CINE410 or FILM410.

Formerly: FILM410.

SLLC411 Experimental Film (3 Credits)

Introductory survey of European and U.S. American experimental cinema.

Cross-listed with: CINE411.

Credit Only Granted for: SLLC411, CINE411 or FILM411.

Formerly: FILM411.

SLLC461 Political Cinema (3 Credits)

Histories of cinema and politics in the 20th century.

Prerequisite: ENGL245, FILM245, or CINE245; or permission of ARHU-School of Languages, Literatures, and Cultures department.

Cross-listed with: CINE461.

Credit Only Granted for: CINE461, FILM461 or SLLC461.

Formerly: FILM461.

SLLC463 Screening Time: History and Memory in Cinema (3 Credits)

An examination of the ways and techniques with which cinema produces a sense of time in the viewer.

Prerequisite: ENGL245, FILM245, or CINE245; or permission of ARHU-College of Arts & Humanities.

Cross-listed with: CINE463.

Credit Only Granted for: SLLC463, CINE463 or FILM463.

Formerly: FILM463.

SLLC468 Special Topics in Film Studies II (3 Credits)

Exploration of topics in film studies beyond national traditions, for example through the lens of theory, genre, auteurship, aesthetic movements in cinema, and/or comparative perspectives. Courses at the 400-level have higher expectations of independent work, including reading and written assignments.

Repeatable to: 12 credits if content differs.

SLLC471 The Cultural Environment of Global Business (3 Credits)

The goal of this course is to provide students with an understanding of cultural aspects pertaining to global business, and thereby increasing their awareness of the cultural factors that motivate decisions and behavior in the business world. Students will gain an understanding of how the business cultures in the rest of the world diverge from the American, and develop the cultural understanding, attitudes, and communication skills needed to function appropriately within an increasingly global and multicultural working environment.

Restriction: Sophomore standing or higher.

Credit Only Granted for: ARHU439B, ARHU439E, ARHU439T, ENES472, SLLC471, SLLC472, or SLLC473.

Formerly: ARHU439B.

SLLC473 European Business Cultures (3 Credits)

The goal of this course is to provide students with an understanding of cultural aspects pertaining to European business, and thereby increasing their awareness of the cultural factors that motivate decisions and behavior in the European business world. Students will gain an understanding of how the European business cultures diverge from the American, and develop the cultural understanding, attitudes, and communication skills needed to function appropriately within an increasingly global and multicultural working environment.

Restriction: Sophomore standing or higher.

Credit Only Granted for: ARHU439B, ARHU439E, ARHU439T, ENES472, SLLC471, SLLC472, or SLLC473.

Formerly: ARHU439E.

SLLC499 Special Topics in World Cultures (3 Credits)

Interdisciplinary, transnational or cross-language course; specific topic to be announced.

Repeatable to: 12 credits if content differs.

SLLC601 Teaching Foreign Languages in Higher Education (1 Credit)

Methods and materials for teaching foreign languages in higher education.

Restriction: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Credit Only Granted for: SLLC601 or SPAN605.

Formerly: SPAN605.

SLLC698 Special Topics in Interdisciplinary Studies (1-3 Credits)

Cross-departmental or cross-programmatic study within the School of Languages, Literatures, and Cultures. Topic to be announced when course is offered.

SLLC789 Master's Independent Study (1-3 Credits)

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

SLLC878 Pedagogical Mentoring for Doctoral Students (1 Credit)

Pedagogical mentoring by faculty members for doctoral students who have completed their first semester of TA training.

Prerequisite: SLLC601; and permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 8 credits if content differs.

SLLC889 Doctoral Independent Study (1-3 Credits)

Repeatable to: 6 credits if content differs.

SOCY - Sociology

SOCY401 Intermediate Statistics for Sociologists (3 Credits)

This is a course about multiple regression for undergraduate students and presumes that students taking this course will be both producers and consumers of multiple regression results. Students will work with the instructor to produce a research poster presentation based on secondary social science data. In addition to multivariable statistics, students will learn some statistical programming as well as how to organize a research presentation.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Restriction: Must not have completed STAT400, BMGT231, or ENEE324.

SOCY405 Scarcity and Modern Society (3 Credits)

Resource depletion and the deterioration of the environment.

Relationship to lifestyles, individual consumer choices, cultural values, and institutional failures. Projection of the future course of American society on the basis of the analysis of scarcity, theories of social change, current trends, social movements, government actions, and the futurist literature.

Prerequisite: 6 credits in SOCY courses.

Credit Only Granted for: SOCY305 or SOCY405.

Formerly: SOCY305.

SOCY407 Explaining Social Change: Fact and Fiction in Understanding Why Our World Looks the Way it Does (3 Credits)

Examines large-scale processes of social change that have produced durable and defining aspects of our contemporary world and asks, How did we get here? It focuses on four key issues: how markets and the pursuit of profit came to organize virtually all aspects of material life and restructured societies around social classes; how democratic forms of governance emerged to direct states and the persistent challenges presented by authoritarian rule; how social revolution erupts and what kinds of changes it yields; and how warfare between states can produce varieties of change not necessarily comprehended in the foregoing domains.

Prerequisite: 6 credits in SOCY courses or permission of Sociology Department.

Credit Only Granted for: SOCY498Y or SOCY407.

Formerly: SOCY498Y.

SOCY410 Social Demography (3 Credits)

Demography is the scientific study of human populations including their size, distribution, composition, and the processes that change these characteristics. Social demography examines how population processes interrelate with institutions in society, such as the family and the economy.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS-Sociology department.

SOCY411 Demographic Techniques (3 Credits)

This is a survey course in techniques that are widely used in demographic analysis. These include techniques that describe population structure and change, that analyze fertility, mortality, and migration, and that evaluate demographic data. In addition, many of the analytic skills and techniques of the course have more general applicability in social science and population health research.

Prerequisite: SOCY201 and SOCY410; or permission of the Sociology department.

SOCY412 Family Demography (3 Credits)

Family and population dynamics. Fertility issues, such as teenage pregnancy, the timing of parenthood, and family size, as they relate to family behavior, such as marital patterns, child care use, and work and the family. Policy issues that relate to demographic changes in the family.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

SOCY413 Sociology of Aging (3 Credits)

The aging of the population is one of the major demographic changes affecting social institutions during the next century. Research demography, sociology, economics, epidemiology, psychology and public health are integrated to develop a broader understanding of the causes and consequences of population aging. A central focus is the diversity of experiences by age, gender, socioeconomic status and health.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

SOCY415 Environmental Sociology (3 Credits)

Overview of the field and theoretical themes within the area of environmental sociology and technology. Current issues are explored including: environmental attitudes; environmental movements; environmental justice; globalization; global climate change; and garbage and food.

Prerequisite: 6 credits in SOCY courses.

SOCY418 Research in Family & Demography (3 Credits)

This is a special topics research course for Family and Demography.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Repeatable to: 6 credits if content differs.

SOCY420 Qualitative Research Methods in Sociology (3 Credits)

Using the sociological imagination to independently explore research questions as designed by students. Readings will explore dilemmas qualitative researchers confront such as, how to conduct research ethically and how their background influences their findings and analysis. Students will learn how to collect data, analyze it, and present it to others.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

SOCY424 Sociology of Race Relations (3 Credits)

Encourages sociological thinking about US racial and ethnic minority populations, with a focus on African Americans, Latinos, Asian Americans, and Native Americans. The central concern is to understand and explain racial/ethnic inequality. A wide array of topics are discussed, including prejudice and discrimination, slavery, residential segregation, cultural inequality, skin tone stratification, economic and educational disparities, and assimilation/generational processes.

Prerequisite: 6 credits in SOCY courses; or permission of the Sociology department.

Cross-listed with: AAST424.

Credit Only Granted for: SOCY424 or AAST424.

SOCY428 Research in Inequality (3 Credits)

This is the special topics research course for Stratification and Inequality.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Repeatable to: 6 credits if content differs.

SOCY431 Principles of Organizations (3 Credits)

Structural and processual characteristics of organizations that make them effective for different purposes and in different environments. Effects of different institutional environments, small group processes, organizational networks, and leadership. Types of organizations studied include formal bureaucracies, professional organizations, and voluntary associations.

Prerequisite: SOCY201 and SOCY202; or permission of BSOS-Sociology department.

SOCY432 Social Movements (3 Credits)

This course broadens students' understanding of social movements in the United States. Many topics are discussed, including the emergence of social movements, why people join social movements, collective identity, gender, culture, emotions, tactics, repression, and the decline of social movements. Various movements are reviewed, including the civil rights movement, the Chicano movement, the women's movement, the LGBTQ movement, the white power movement, the American Indian movement, and the animal rights movement.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS-Sociology department.

SOCY435 Society, Biology, and Health (3 Credits)

It is not too far-fetched to speak of the pancreas under capitalism or the proletarian lung. Humans are social beings in physical bodies. In this course, we draw on research studies, podcasts, news articles, and best-selling non-fiction to inform conversation and writing on how various dimensions of human biology influence, and are influenced by, our social and cultural environment. We focus on conceptualizing human behavior as an interplay between both nature and nurture, and consider how this approach changes our understanding of modern social problems. This course is appropriate for students with a range of backgrounds in the social and natural sciences; introductory-level supplemental readings on all necessary biological concepts will be provided.

Prerequisite: Must have completed 6 credits in SOCY courses or permission of BSOS Sociology Department.

SOCY441 Social Stratification and Inequality (3 Credits)

The sociological study of social class, status, and power. Topics include theories of stratification, correlates of social position, functions and dysfunctions of social inequality, status inconsistency, and social mobility.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS-Sociology department.

Restriction: Junior standing or higher.

SOCY442 The Black Middle Class (3 Credits)

Students will learn about the Black Middle Class. They will examine and explore the historical context that led to the rise of a Black Middle Class. Innovative avenues into the Black Middle Class will also be examined, including various household and family formations. Finally, the course will cover the consequences of being in the The Black Middle Class, with an emphasis on residential segregation and racial identity.

Prerequisite: 6 credits in SOCY courses.

Credit Only Granted for: SOCY498T or SOCY442.

Formerly: SOCY498T.

SOCY445 Sex and Love in Modern Society (3 Credits)

Sociological theories of sex and gender are used to explore empirical research on women's and men's sexual behavior and attitudes; variation in gendered sexuality by key social characteristics and how gendered sexuality is constructed and controlled; changes in sexuality over time and across relationship types, focusing on changes in sexual desire and behaviors and on the changing meaning of sex and marriage in U.S. society and other countries. Contemporary debates about sexuality will also be examined.

Prerequisite: SOCY201, SOCY202, SOCY203, and SOCY230.

Restriction: Must be in Sociology program; or permission of BSOS-Sociology department.

Credit Only Granted for: SOCY498X or SOCY445.

Formerly: SOCY498X.

SOCY450 Investigating Women's Empowerment in Low and Middle Income Countries (3 Credits)

Students in this course will learn how the study of women's empowerment in low and middle income countries (LMICs) has developed, its current state of measurement, and new avenues to pursue in the future. Examining the extensive research on gender-based inequalities in educational attainment, employment rates, and health status, students will investigate how power imbalances across individuals, households, and institutional factors result in persistent inequality. Bringing an intersectional perspective to the forefront of the course, we will study how to design effective intervention policies that seek to improve the daily lives of women, girls and their families.

Prerequisite: SOCY201 and SOCY202; or permission of BSOS-Sociology department.

SOCY451 Sociology of Culture (3 Credits)

Analyzes the relationship between society and culture. How do social forces affect cultural objects and products? How do values and meanings shape individual behavior? How can culture be both a source of domination and resistance? These and other topics will be analyzed to show the role of culture in our lives.

Prerequisite: 6 credits in SOCY courses; or permission of the department.

Credit Only Granted for: SOCY498C or SOCY451.

Formerly: SOCY498C.

SOCY452 Sociology of Mental Health (3 Credits)

The class focuses upon the larger question: "What is the balance between people being mentally 'ill' and us having a 'sick' society?" To explore this question, students will utilize sociological approaches toward mental illness and health. This will manifest as a focus on how social organization is related to mental health and illness. Students will consider how sociologists understand the nature, distribution, and treatment of mental illness and health in society, and will develop a personal understanding of what it means to be mentally healthy.

Prerequisite: 6 credits in SOCY courses; or permission of the department.

Credit Only Granted for: SOCY4980 or SOCY 452.

Formerly: SOCY4980.

SOCY453 Racial Residential Segregation (3 Credits)

Examines how race and ethnicity have historically shaped residential patterns in the U.S. and their continuing importance today. Students will investigate the causes of residential segregation, including residential preferences, discrimination, and socioeconomic differences between racial and ethnic groups. Significant attention will be paid to how immigration and ensuing ethnic and racial diversity are reshaping the residential landscape. The readings highlight the U.S. context, though residential patterns in different countries are also briefly discussed.

Prerequisite: 6 credits in SOCY courses; or permission of the department.

Credit Only Granted for: SOCY498D or SOCY453.

Formerly: SOCY498D.

SOCY455 Social Dimensions of Privacy and Surveillance (3 Credits)

Today, it is quite common in many spheres of life that we divulge personal information in exchange for something else. This course examines practices of surveillance in contemporary society in relationship to collective understandings of privacy. By the end of this course, students will be able to analyze privacy norms and practices in the age of mass surveillance, how surveillance produces inequalities in relation to privacy, and how definitions and regulations of privacy and surveillance change over time.

Prerequisite: 6 credits in SOCY courses; or permission of the department.

Credit Only Granted for: SOCY391 or SOCY455.

SOCY456 Smart Machines and Human Prospects (3 Credits)

Artificial intelligence is everywhere and never sleeps. It is transforming our social institutions in intended and unintended ways. While scientists debate the feasibility of engineering conscious machines with general intelligence, no one debates that the global race is on to create more potent computers. Through targeted research, discussion, and presentation of findings students will answer a specific question on how, where, and in what ways society is being changed by smart machines.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Credit Only Granted for: SOCY416 or SOCY456.

SOCY457 Sociology of Law (3 Credits)

Social, political, and cultural sources of legal norms and concepts; and how the law shapes society and society shapes the law using sociological theoretical frameworks. The role of social change, social reproduction and inequality (including race, class, gender, and sexuality) to achieve certain objectives such as compliance, deterrence and social control.

SOCY458 Special Topics in Study Abroad IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

SOCY461 Sociology in Action: Research and Community Engagement in Prince George's County (3 Credits)

Sociology in Action is a research course that will use the science of sociology to inform real life issues and contribute to the development of social programs. In this course, students will gain hands-on experience in applying sociology by working with clients in Prince George's County on specific social problems and issues. Please assess your ability to commit to this course and fulfill all requirements. Given that students will be working with Prince George's County organizations, there will be some variation and unpredictability in the nature of the projects.

Prerequisite: SOCY202; or students who have taken courses with similar content may contact the department.

SOCY462 Digital Technology and Society (3 Credits)

Situates digital technology in our social environment and then examines how this relationship reflects, reinforces, or reorders social hierarchies. Students will learn the conceptual and methodological foundations for studying and evaluating how technologies such as health and social media apps, the personal computer, artificial intelligence, and weapons of war have evolved, diffused and impacted social life. Students will explore and then conduct independent research on the relationship between technology and social inequalities through the lens of health and medicine, the environment and climate change, jobs and the workplace, as well as government and criminal justice.

Prerequisite: Must have completed 6 credits in SOCY courses; or permission of BSOS-Sociology department.

SOCY463 Sociology of Masculinity: How Much Has Masculinity Really Changed? (3 Credits)

An examination of the history both feminist social movements and feminist sociology in a specific way. It uses the sociological subfield of men and masculinities as a keyhole through which we will study 'the stalled revolution' for women's equality. Along the way, we will familiarize ourselves with academic and popular reports about changing and contested definitions, ideas, and behaviors of masculinity.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS Sociology department.

SOCY465 The Sociology of War: State and Society since the American Revolution (3 Credits)

Since the American and French Revolutions at the end of the eighteenth century, warfare has been marked by the way national states draw ordinary people into armed conflicts—as members of the military, producers and controllers of resources and supporters or resisters, and also as targets and victims. This course examines how the centering of ordinary people in war has transformed over time, continuing right up to the current conflict in Ukraine. Alongside explaining why states make war the way they do, the course explores the impacts of making war and living through conflict on the societies embroiled in it.

Prerequisite: Must have completed 6 credits in SOCY courses; or permission of BSOS-Sociology department.

Credit Only Granted for: SOCY465 or SOCY265.

SOCY467 Sociology of Education (3 Credits)

Students will examine educational institutions from a sociological perspective by analyzing the latent and manifest functions of schooling. Students will study schools as structured organizations; investigate the various roles and subcultures present among teachers and students; and explore educational disparities in access and achievement.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS-Sociology department.

SOCY470 Pregnancy and Parenthood in an Unequal Society (3 Credits)

Analysis of patterns in sexual activity, contraceptive use, and unintended pregnancy, and how they reinforce or alleviate socioeconomic, gender, and racial inequalities. Emphasis on the role of healthcare providers and contraceptive access, attitudes about motherhood and contraception, policy interventions, and institutional designs. Social and economic consequences of increasing women's ability to control their fertility.

Prerequisite: 6 credits in SOCY courses; or permission of Sociology Department.

SOCY475 Sociology of Emotions (3 Credits)

Emotions are often thought of as purely subjective experiences. How much more personal than one get than their emotions and feelings? In addition to their physiological and psychological aspects, however, emotions have a social side that often go unnoticed. This course will introduce you to the social aspects of emotions. In doing so, we will cover wide-ranging topics including the social causes of emotions, social norms about emotions, disparities in emotionalexperiences, and the ways in which emotions can maintain and reshape society.

Prerequisite: 6 credits in SOCY courses; or permission of BSOS-Sociology Department.

Credit Only Granted for: SOCY498W or SOCY475.

Formerly: SOCY498W.

SOCY480 Researching the Middle East (3 Credits)

Introduces religion, gender, and politics in the Middle East and North Africa. After an overview of the political and social history the focus will be on methods for carrying out research on fundamental issues facing Middle Eastern societies, including national identity, religion, gender relations and the status of women in the family, politics, education, and labor market.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Credit Only Granted for: SOCY498E or SOCY480.

Formerly: SOCY498E.

SOCY481 Ideology and Social Conditions in the Making of Terrorism in the Middle East and North Africa (3 Credits)

The sociology of terrorism and political violence in the Middle East and North African will be explored in this course.

Prerequisite: Must have completed 6 credits in SOCY courses or permission of the Sociology department.

Restriction: Sophomore standing or higher.

SOCY490 Experimental Research Practicum (3 Credits)

Hands-on experience in designing, conducting, and analyzing experimental research. Introduces students to causal inference in social scientific research, focusing on experimental designs. Students will get hands-on research experience running experimental studies in the group processes lab. Students will also work with the professor and graduate students in the department to develop a research idea that can be executed in the spring semester.

Prerequisite: SOCY201 and SOCY202; or permission of the Sociology department.

Additional Information: This is the first course in the experimental research practicum 2-course sequence.

SOCY491 Experimental Research Design (3 Credits)

Students will finalize the design of their studies from the fall semester and carry out the research in this course. Introduces students to analyzing experimental data and presenting results from these data. Students will continue to get hands-on research experience running experimental studies in the group processes lab and working with the professor and graduate students in the department to further develop their projects.

Prerequisite: SOCY201, SOCY202 and SOCY490; or permission of BSOS-Sociology department.

Additional Information: This is the second course in the experimental research practicum 2-course sequence.

SOCY498 Selected Topics in Sociology (1-3 Credits)

Topics of special interest to advanced undergraduates in sociology. Such courses will be offered in response to student request and faculty interest.

Prerequisite: SOCY201 and SOCY202; or permission of BSOS-Sociology department.

Repeatable to: 6 credits.

SOCY601 Statistics For Sociological Research I (3 Credits)

Introductory statistical concepts are covered including descriptive statistics, probability, sampling distributions, expected values, hypothesis testing, tests of significance, measures of association, and if time permits, introduction to regression analysis. Statistical programming software may be used.

Prerequisite: SOCY201; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

Credit Only Granted for: SOCY601 and SURV601.

SOCY602 Statistics For Sociological Research II (3 Credits)

This course introduces regression analysis using matrix algebra. Topics include bivariate regression, multivariate regression, tests of significance, regression diagnostics, indicator variables, interaction terms, extra sum of squares, and the general linear model. Other topics may be addressed such as logistic regression and path analysis. Statistical programming software may be used.

Prerequisite: SOCY601; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

Credit Only Granted for: SOCY602 or SURV602.

SOCY609 Practicum in Social Research (3 Credits)

The conduct of research in collection and analysis of social science data under the guidance of experienced investigators. Emphasis on a particular research area of procedure, e.g. secondary analysis of survey data; experimental design; evaluation of research; data collection techniques.

Restriction: Permission of instructor.

SOCY610 Logic of Social Inquiry (3 Credits)

An introductory course on the fundamental issues that arise in the design, execution, analysis, and writing stages of the research process. The course is designed to help first-year graduate students begin their transition from a consumer to a producer of social research.

Restriction: Restricted to Sociology graduate students.

Credit Only Granted for: SOCY699D or SOCY610.

Formerly: SOCY699D.

SOCY611 Introduction to Demographic Methods (3 Credits)

Survey of standard demographic methods for the description and analysis of population size, structure and composition, including techniques for the analysis of fertility, mortality and migration.

SOCY612 Families and Modern Social Theory (3 Credits)

Designed to build knowledge about theories of modernity, with emphasis on modern families. Thus, it combines some core theories of modernity (Giddens, Bourdieu, Foucault), with key theoretical debates about families and intimate relationships (economics and economic sociology, gender, race, class), and social change (development and new family forms).

Credit Only Granted for: SOCY699F or SOCY612.

Formerly: SOCY699F.

SOCY613 Social Movement Theory (3 Credits)

The objective of this course is to introduce students to the field of social movements, with an emphasis on understanding theoretical tools within the field. To accomplish this, students will review theories on social movements including Karl Marx, breakdown approaches, resource mobilization and political process theory, dramaturgy, and new social movement theory. Students will also devote considerable attention to core concepts in the field, including social networks, political opportunity structure, repression, framing, collective identity, and movement outcomes.

Credit Only Granted for: SOCY699R or SOCY613.

Formerly: SOCY699R.

SOCY616 Sociology Pro-Seminar (1 Credit)

The proseminar is the guide to Sociology as a profession, and how sociology is practiced here at the University of Maryland. The goal of the course is to help students gain insider knowledge about how to develop sociological knowledge and capabilities, and what it means to practice sociology as a graduate student and beyond. The course will discuss both practical aspects of professional life in general and specific topics of interest.

Restriction: Must be in Sociology (Doctoral) program.

Credit Only Granted for: SOCCY699P or SOCY616.

Formerly: SOCY699P.

SOCY618 Computer Methods for Sociologists (3 Credits)

Designed to present the potential of the computer as a tool in sociological research. Projects involving programming and running of data manipulation techniques, statistical techniques, and simple simulations.

Prerequisite: SOCY401; or students who have taken courses with comparable content may contact the department. And must have elementary knowledge of a programming language; or CMSC120; or students who have taken courses with comparable content may contact the department.

Restriction: Permission of instructor.

SOCY620 Development of European and American Sociological Theory (3 Credits)

Review of the history of sociological thought with major attention to the key figures (from Marx to C. Wright Mills).

Prerequisite: SOCY203 or SOCY403; or students who have taken courses with comparable content may contact the department; or permission of instructor.

SOCY621 Contemporary Sociological Theory (3 Credits)

Review of sociological theory since approximately 1970, with emphasis given to schools of thought (from symbolic interaction to post-modernism) and principle participants in them (from Goffman to Baudrillard).

Prerequisite: SOCY620, SOCY203, or SOCY403; or permission of instructor.

SOCY622 The Sociology of Knowledge (3 Credits)

Analysis of the relation of types of knowledge to social structure. Role of social class and social organization in the development of science, political ideology, belief systems and social values. Social roles associated with production of knowledge.

SOCY623 Families and Modern Social Theory (3 Credits)

Modern families will be explored by combining core theories of modernity with key theoretical debates about families and intimate relationships (economics and economic sociology, gender, race), and social change (development and new family forms).

Restriction: Must be in one of the following programs (Sociology (Doctoral); Sociology (Master's)) ; or permission of instructor.

SOCY625 Activism and Global Movements (3 Credits)

An introduction to the research on activism, focusing particularly on the global and transnational aspects of activism and social movements. The course begins with an overview of the theoretical literature on activism and social movements. Then, we will focus on case studies of particular movements that have a global component and have been the focus of recent sociological inquiry: the globalization movement, Arab Spring, and the climate/climate justice movement.

Restriction: Must be enrolled in a Sociology (SOCY) graduate program; or permission of instructor.

SOCY626 Demography of Aging (3 Credits)

Examines the demographic foundations of population aging, focusing on macro and historical patterns as well as on trends in mortality health and disability. Also examines the relationship between aging and social institutions such as the family, the economy and public policy.

SOCY627 Migration (3 Credits)

Examines theories of immigration and immigrant adaptation, empirical patterns of migration and immigration, the economic and social effects of immigration, as well as immigration policy issues.

SOCY630 Population and Society (3 Credits)

Selected problems in the field of population; quantitative and qualitative aspects; American and world problems.

SOCY633 Qualitative Research Methods II, Field Research (3 Credits)

As the second course in the qualitative methods sequence, students are expected to have a general knowledge of qualitative methods. Students should have already learned how to collect and analyze qualitative data using interview and ethnographic methods. Student will spend this semester collecting and analyzing qualitative data and must begin the course with a formulated research question, a plan for data collection and sampling. Each student will spend the first two weeks preparing a proposal for submission to the University of Maryland's Institutional Review Board to gain Human Subjects approval to collect data. Then, students will spend a month collecting data, a month analyzing data using QSR NVivo, which will be taught as part of the coursework, and writing up the findings. The end product of the course will be an empirical paper based on the data collected and analyzed throughout the semester.

Prerequisite: SOCY632; or students who have taken courses with comparable content may contact the department.

SOCY634 Attitudes and Public Opinion (3 Credits)

Processes involved in the formation of attitudes; effects of communication; measurement techniques.

SOCY635 Social Aspects of Fertility (3 Credits)

Demographic and socioeconomic aspects of fertility behavior; causes and consequences of fertility decline; relationship between women's status and fertility; determinants of adolescent and nonmarital fertility; differential fertility by race/ethnicity and migration status.

Restriction: Permission of instructor.

SOCY637 Demography Of The Labor Force (3 Credits)

Demographic trends as related to the composition of the U.S. labor force and trends in income; employment status of immigrants, women, and minorities; relationship between skills and jobs; types of data available for study of the labor force.

Restriction: Permission of instructor.

SOCY641 Leadership in Diverse Organizations (3 Credits)

Provides students with a practical understanding of leadership and a framework for understanding three key conditions from which effective leadership emerges: timing, organizational characteristics, and individual characteristics. We will consider different dimensions and/or styles of leadership, as well as the methods effective leaders use to build solidarity within groups and organizations.

Restriction: Must be in one of the following programs: Criminology and Criminal Justice (Master's); Criminology and Criminal Justice (Doctoral); Sociology (Master's); Sociology (Doctoral); or permission from either the Sociology Department or Criminology & Criminal Justice Department.

SOCY642 The Sociology of Mental Health (3 Credits)

Social factors that influence mental health. Group dynamics of mental health preservation.

SOCY643 Power and Status in Organizations (3 Credits)

Organizations affect virtually every aspect of modern social life. The impact and reach of public safety organizations—those special entities purportedly designed to maintain order and safety—are particularly influential. Although sociologists, psychologists, economists, and management scholars all examine the workings of status and power within organizations, our perspective will be primarily sociological as we explore how power and status operate within the context of organizations.

Restriction: Must be in one of the following programs: Criminology and Criminal Justice (Master's); Criminology and Criminal Justice (Doctoral); Sociology (Master's); Sociology (Doctoral); or permission from BSOS-Sociology department.

SOCY644 Gender, Work, and Family (3 Credits)

The interrelationships among gender, work, and family in contemporary societies. Major research issues addressed from an interdisciplinary and comparative (international) perspective.

SOCY645 Sociology of the Self Concept (3 Credits)

Theory and empirical research dealing with the social determination and social consequences of the self-concept. Sociological, psychological, and psychoanalytic approaches to the self.

SOCY646 Public Image Management and Policy Solutions (3 Credits)

Explores how to mitigate and solve image management problems that arise in organizations. Students will learn how to evaluate their organization, make recommendations for future development, and implement the practical aspects of the solution. Problems arise daily in organizations. Leaders need effective strategies to mitigate and solve these problems. While some problems are structural, daily problems often focus on social interactions among people. The course will focus on evaluating the source of problems, enhancing cultural competency among employees, restructuring and rebranding the organization, managing public image, and forming and implementing innovative policy solutions for long-term goals.

Restriction: Must be in one of the following programs: Master of Professional Studies in Public Safety Leadership and Administration (MPLA); Criminology and Criminal Justice (Master's); Criminology and Criminal Justice (Doctoral); Sociology (Master's); Sociology (Doctoral); or permission from either the Sociology Department or Criminology & Criminal Justice Department.

SOCY653 Family Demography (3 Credits)

Demographic perspective on family and household relationships; relationships among economic institutions, family structure, and the content of family life; research from contemporary U.S., historical and cross-cultural sources.

Restriction: Permission of instructor.

SOCY656 Intersectionality and Population Health Disparities (3 Credits)

An intersectional examination of population health disparities.

SOCY657 Constitutional Law and Public Safety (3 Credits)

Introduces students to the constitutional issues inherent in the practice of policing. Particular emphasis is placed on issues pertaining to the 4th, 5th, and 6th Amendments.

Restriction: Must be in one of the following programs: Master of Professional Studies in Public Safety Leadership and Administration (MPLA); Criminology and Criminal Justice (Master's); Criminology and Criminal Justice (Doctoral); Sociology (Master's); Sociology (Doctoral); or permission from BSOS-Criminology & Criminal Justice department.

SOCY660 Theories of Social Psychology (3 Credits)

An introduction to some of the theories in social psychology that are particularly useful to sociologists. Topics to be covered include theories of cognitive consistency, social exchange, symbolic interaction, role theory, group processes, and collective behavior.

Prerequisite: Must have completed an undergraduate training in sociological research methods, statistics, and theory; or students who have taken courses with comparable content may contact the department.

SOCY661 Social Stratification (3 Credits)

Major theoretical and research problems in the sociology of social stratification. The characteristics, correlates, and consequences of class and status stratification; the distribution of power; the relationship of social stratification to ideology and the institutional orders of society.

Restriction: Permission of instructor.

SOCY664 Armed Forces and Society (3 Credits)

Analysis of the relationship between military organization and modern industrial society. Growth and decline of the mass army, the transition from conscription to all-volunteer forces, the social legitimacy of military organization, the military as a form of industrial organization, and problems of civil-military relations in the modern world.

SOCY670 Applied Research Methods and Technological Training Approaches (3 Credits)

Introduces students to the purpose, methodology, analysis, and ethics of social science research, especially in the areas of criminal justice and law enforcement. Students will engage in the research process from developing a research question, designing, and conducting a thorough research study, and collecting data for analysis and findings. Both qualitative and quantitative research models will be shared to facilitate students' learning around methodological inquiry and interpretation, including survey design, literature reviews, and report writing. Additionally, students will be exposed to contemporary models impacting law enforcement and public officials, such as algorithmic bias, facial recognition, and individual and community surveillance. At the end of the course, students will be expected to complete a research paper after submission of a research proposal to complete course requirements.

Restriction: Must be in one of the following programs: Public Safety Leadership and Administration (MPS); Leadership in Diverse Organizations certificate; Criminology and Criminal Justice (Master's); Criminology and Criminal Justice (Doctoral); Sociology (Master's); Sociology (Doctoral); or permission from BSOS-Sociology department.

SOCY671 Sociology of Development (3 Credits)

Third World development at institutional, organizational, and community levels; factors contributing to success, effectiveness and sustainability of development and to problems and hindrances.

Restriction: Permission of instructor.

SOCY673 Sociology of Gender (3 Credits)

This graduate seminar is an introduction to the broad field of sociology of gender. The focus of the seminar is, first, to examine gender as a multilevel system of social practices that construct and reinforce the gender binary, which functions as a master binary that creates "women" and "men" as two different and unequal categories through processes that instill and reinforce gendered identities, interactions, and institutions. In the course, students will examine how gender intersects with other domains of inequality, particularly sexuality, race-ethnicity, social class, and nationality.

SOCY675 Sociology of Emotions (3 Credits)

Reviews the sociological literature on emotion. We will cover wide-ranging topics including the social causes of emotions, social norms about emotions, disparities in emotional experiences, and the ways in which emotions can maintain and reshape society.

SOCY681 Group Processes (3 Credits)

An overview of sociology's group processes perspective, one of the three "faces" of sociological social psychology. The group processes tradition focuses on fundamental social processes that occur in group contexts. These include power, status, legitimacy, emotion, identity, prosocial behavior, justice, and others. The course will attend to all of these areas, with a special focus on research that addresses inequalities by race, gender, and class that are manifested in or exacerbated by specific group processes. Additionally, research in the group processes area tends to be characterized by formal approaches to theory and by experimental methodology, and the course will attend to the role of theory and experiments in building knowledge on group processes.

Restriction: Permission of instructor.

Credit Only Granted for: SOCY681 or SOCY699G.

Formerly: SOCY699G.

SOCY683 Power, Status, and Leadership in Groups (3 Credits)

An overview of research on power, status, and leadership in group contexts. Power, or the ability to achieve one's will even against resistance from others, represents how leadership is often conceived in everyday thinking. The course will review the extensive literature on power in social groups and networks, one conclusion of which is that the power to control others often leads to difficulty in relationships. Leading with status (or influence) has the ability to mitigate some of the problems that are created by inequalities in power, and the course will also review the extensive body of theory and research on status and influence in groups. Organizations are political entities that require the use of power and influence to be effective. Thus, the course will survey theory and research on power, influence, and politics in organizational contexts, paying particular attention to how they are relevant to leadership.

Restriction: Permission of instructor.

Credit Only Granted for: SOCY683 or SOCY699N.

Formerly: SOCY699N.

SOCY699 Special Social Problems (1-16 Credits)**SOCY701 Issues in the Integration of Theory and Method (3 Credits)**

The course is intended solely for advanced doctoral sociology students. The main objective of the course is to develop a dissertation proposal. Consequently, this course may only be taken during or after the semester in which the student completes the specialty (comprehensive) exams.

Prerequisite: Must have attained advanced status in the sociology Ph.D. program; or permission of instructor.

Credit Only Granted for: SOCY699Y or SOCY701.

Formerly: SOCY699Y.

SOCY709 Advanced Special Topics in Data Analysis (3 Credits)

An intensive examination of an area of interest in data analysis, including such topics as log linear analysis; discriminant function analysis; canonical correlation; factor analysis; analysis of qualitative data; content analysis; mathematical models.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY719 Advanced Special Topics in Social Psychology (3 Credits)

An intensive review of an area of current interest in the field, including such topics as social influence; interpersonal attraction; equity theory; the dramaturgical perspective; stress and coping; interpersonal conflict; the social psychology of large organizations.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY728 Advanced Special Topics in Meta-theory (3 Credits)

An intensive examination of an area of interest in sociological theory, including such topics as paradigm conflicts; philosophy of social science; value issues in sociological theory; formal theory.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY729 Advanced Special Topics in Substantive Theory (3 Credits)

An intensive examination of an area of interest in theory or a school of sociological theory, including such topics as ethnomethodology; structuralism; Marxism and critical theory; historical study of a major sociological theorist such as Marx, Weber, or Durkheim.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY739 Advanced Special Topics in Organizations and Occupations (3 Credits)

An intensive review of an area of current interest in the field, including such topics as managing organizational data sets; problems of industrial democracy; quality of work life; innovation and productivity.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY749 Advanced Special Topics in Demography (3 Credits)

An intensive review of an area of current interest in the field, including such topics as population policy; social and demographic issues in aging; migration; family demography.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY758 Advanced Special Topics in Sex Roles (3 Credits)

An intensive review of an area of current interest in the field, including such topics as labor force participation; comparative studies; sex roles and aging; gender socialization.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY759 Advanced Special Topics in Sociology of the Family (3 Credits)

An intensive review of an area of current interest in the field, such as alternative family life styles, cross-cultural and comparative family studies; victimization (sexual and physical abuse).

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY769 Advanced Special Topics in Military Sociology (3 Credits)

An intensive review of an area of current interest in the field, including such topics as women in the military; conscription and national service; organizational change in the military; comparative studies of the military.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY789 Advanced Special Topics in Social Stratification (3 Credits)

An intensive examination of an area of interest in the field, including such topics as macrostratification; measurement of prestige; institutional variation in status attainment.

Restriction: Permission of instructor.

SOCY799 Master's Thesis Research (1-6 Credits)**SOCY819 Research Seminar in Social Psychology (1 Credit)**

An advanced research seminar for students preparing to do research or take comprehensive examinations in social psychology.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY829 Research Seminar in Sociological Theory (1 Credit)

An advanced research seminar for students preparing to do research or take comprehensive examinations in sociological theory.

Restriction: Permission of instructor.

Additional Information: May be repeated for credit with permission of instructor.

SOCY839 Research Seminar in Organizations and Occupations (1 Credit)

An advanced research seminar for students preparing to do research or take comprehensive examinations in organizations or occupations.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

SOCY849 Research Seminar in Demography (1 Credit)

An advanced research seminar for students preparing to do research or take comprehensive examinations in demography.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

SOCY858 Research Seminar in Gender, Work and Family (1 Credit)

An advanced research seminar for students preparing to do research or take the specialty examination in Gender, Work and Family.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

SO CY859 Research Seminar in Sociology of the Family (1 Credit)

An advanced research seminar for students preparing to do research or take comprehensive examinations in sociology of the family.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

SO CY889 Research Seminar in Social Stratification (1 Credit)

An advanced research seminar for students preparing to do research or take comprehensive examinations in stratification.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

SO CY898 Pre-Candidacy Research (1-8 Credits)**SO CY899 Doctoral Dissertation Research (1-8 Credits)**

SPAN - Spanish

SPAN401 Advanced Composition I (3 Credits)

Compositions and essays with emphasis on stylistics, idiomatic and syntactic structures. Organization and writing of research papers.

Prerequisite: SPAN302; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SPAN402 Advanced Composition II (3 Credits)

Compositions and essays with emphasis on stylistics, idiomatic and syntactic structures. Organization and writing of research papers.

Prerequisite: SPAN401; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SPAN404 The Bright Middle Ages (3 Credits)

The period that precedes the Renaissance has been traditionally labeled as the "dark" Middle Ages and it is common to associate an evil, brutality and barbarian life style with the time span comprised of between the 5th and the 15th centuries. This undergraduate seminar does not intend to embellish the truth or to minimize the hardships of life and death at the time of the Crusades. In fact, an objective timeline of historical events that marked that period as middle will be provided, and the central question to be addressed in this class is, "Middle of what"? As we try to answer it, we will be able to examine many "modern" aspects of the Middle Ages. Some of them have been highlighted since the beginning of the 20th century and justify a view of the Middle Ages as a bright and "modern" period in which, while overcoming despicable difficulties and a lack of facilities, the most precious treasures of our times were intellectually conceived, manufactured, built, and written. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN404, or SPAN408I.

Formerly: SPAN408I.

SPAN405 North American Neomedievalism: the U.S. East Coast and 16th-Century Spain (3 Credits)

The fall of the Roman Empire certainly did not affect North America, but the European Middle Ages created several patterns of expansion that, with considerable transformations, are present in North America and all over the world. Through the study of Neomedievalism, students will be able to better understand today's national and international relations. We will read scholarship that helps us understand that it is not an accident that we have replicas of medieval villas and that we are increasingly interested in developing games and producing movies that replicate medieval life. We will also study why the failure and success of social and economic systems of the past have influenced modern civilizations and why the loaded concepts of "barbarian" and "foreign" have not disappeared. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN405 or SPAN408C.

Formerly: SPAN408C.

SPAN406 Don Juan Manuel's Fictional and Historical Prose (3 Credits)

Dedicated to the literary production of an important author: Don Juan Manuel. By examining the interaction among writing, reading and the oral acquisition of knowledge in his works, special attention will be given to how the border between fact and fiction is constructed in the Middle Ages.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN407 Early Modern US and Early Modern Spain: A Common History (3 Credits)

The impact of Spanish early modern literature, cartography and architecture in the US Atlantic Coast (Labrador Peninsula to Florida). The class will start with readings that will provide a general overview of the Spanish presence in the US and its role in the early history of this country. We will continue reading about the voyages of exploration to the US East Coast of 1521-1526, which were sponsored by a Spaniard, Lucas Vazquez de Ayllon. These voyages subsequently resulted in a territory named "Tierras de Ayllon" (from Florida to the Chesapeake Bay). These Lands of Ayllon were located on the settlement of Chicora and the Missions of Ajacan and San Miguel de Gualdape. We will focus on the history and the geographical location of these Spanish establishments; they paralleled geographically and anteceded chronologically those of the British colony at Roanoke (1585) and the eventual establishment of Jamestown (1607). Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

SPAN408 Special Topics in Iberian and Latin American Studies (3 Credits)

Special topics in (a) the literature and film of Spain, Spanish-speaking Latin America, and U.S. Latina/o communities; (b) Spanish linguistics; and (c) Spanish, Latin American, and U.S. Latino cultural studies. Each topic will be announced when the course is offered.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN410 Libro de Buen Amor: Literary Matchmaking, Theory, and Praxis (3 Credits)

Literary traditions in the Libro de buen amor. Taught in Spanish

Prerequisite: One of the following SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN410 or SPAN413.

Formerly: SPAN413.

SPAN412 Women in the Middle Ages: Myths and Daily Life (3 Credits)

Explores the role of women during the Middle Ages and analyzes the active participation of women in a society in which men's occupation was warfare. Also explores "feminine voices" and female representations in the literature of the times.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN417 Practicum in Translation VI (3 Credits)

Translation of complete literary texts from Spanish into English. Evaluation of different versions of the original. Problems of interpretation, literary structure and analysis.

Prerequisite: SPAN316; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SPAN418 Hispanic Literature in Translation (3 Credits)

Repeatable to: 6 credits if content differs.

SPAN420 Spanish and Spanish-Speaking Communities in the US (3 Credits)

Lays the foundations for the historical, linguistic, cultural, sociological, and political study of Spanish in the United States (US). The main goal of the course is to develop critical awareness about the relationship between language, individuals, and society within the diverse Spanish-speaking communities of the US. To this end, the course will analyze issues concerning, first, the historical and dialectal characteristics of the Spanish language in different regions of this country; second, the acquisition of Spanish as a minority language and in contact with both English and a large number of Spanish dialects; and third, the space that Spanish occupies in US public life now and in the future. The design of activities, assignments, and assessment procedures is based on promoting individual and collective awareness about crucial topics related to the present and the future of Spanish as one of the national languages of the US.

Prerequisite: SPAN325, SPAN425, or permission of instructor.

Credit Only Granted for: SPAN478A or SPAN420.

Formerly: SPAN478A.

SPAN422 Intercultural Communication and Negotiation (3 Credits)

Focuses on the relationship of language and culture of those operating in world markets. Particular attention will be given to intercultural communication, linguistic systems, culture specific perceptions of, and negotiation with, the Spanish-speaking world. Taught in Spanish.

Prerequisite: SPAN370 OR SPAN371 OR SPAN373 OR SPAN 374.

Restriction: Junior standing or higher.

SPAN425 Hispanic Linguistics II: Structures of Spanish (3 Credits)

This course begins with an introduction to general concepts in linguistics, from language function and the brain to communication, culture, and thought, and their relation to other disciplines in the social sciences.

The main purpose of this course is to provide an overview of Hispanic linguistics through multiple perspectives, while exploring the areas of Spanish morphology, syntax, and semantics. This course will also focus on the structural tendencies of Spanish through a variety of practical activities. Taught in Spanish.

Prerequisite: SPAN303; and SPAN311 or SPAN316 or SPAN325.

SPAN426 Hispanic Linguistics III: Language in Use (3 Credits)

Designed for students without previous experience in Linguistics. Focus on language variation and use, linguistic change, and bilingualism. Taught in Spanish.

Prerequisite: SPAN303; and SPAN311 or SPAN316 or SPAN325. Also offered as: SPAN626.

Credit Only Granted for: SPAN426 or SPAN626.

SPAN427 Visions and Fictions from Spain (3 Credits)

Overview of Spanish Cinema from the end of the 19th century through present day Spain. Exploration of the production of literary and cinematic texts in their sociohistorical, political, religious and cultural contexts. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, or SPAN333; or students who have taken courses with comparable content may contact the department; or permission of ARHU-Spanish & Portuguese Languages & Literatures department.

Cross-listed with: CINE427.

Credit Only Granted for: CINE427, FILM427 or SPAN427.

Formerly: FILM427.

SPAN431 Mexican Women Writers (3 Credits)

Focuses on Mexican women writers from the colonial period to the present. It consists of various types of texts, including poetry, short story, essay, and novel. Its principal themes include the relations among experience, knowledge, and expression; the presence or absence of women in literary histories, including Wikipedia pages; feminism; and the opportunities and challenges presented by the category of women writers. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN431 or SPAN408G.

Formerly: SPAN408G.

SPAN432 Colonial Latin American Literature (3 Credits)

Examines the key themes, writers, literary movements, and cultural debates of the colonial period.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN433 Women and Culture in Colonial Latin America (3 Credits)

Considers questions of women and historical production, women writers in colonial times, and contemporary literary interpretations of colonial realities. Debates the continued legacy of female archetypes from the colonial period to the present, and epistemological questions regarding the production of knowledge.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN434 The Usable Past: Reflecting on Archives in Contemporary Fictions and Films from the Southern Cone (3 Credits)

Che Guevara on a t-shirt, Eva Peron in a Broadway musical, Bolivar as trans on a postcard, Gabriela Mistral on a peso bill, Pablo Neruda as a postman's friend, Frida Kahlo as a feminist icon, Artigas in a blues band ... The list goes on. Nevertheless, what all these cultural appropriations have in common is that the present has used the past to inscribe a functional narrative for that time. This course will not ask if we can know past events as they really happened, but rather it will explore how contemporary fictions, films, and visual art from the Southern Cone construct usable cultural archives for their present. Also, this seminar traces the ways in which contemporary authors, filmmakers, and visual artists reflect on the past in order to critically read their present. Concentrating on the past as both the subject of fiction and as a force for inscribing fiction, this seminar inscribes an approach to time that moves away from a linearity.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN434 or SPAN408F.

Formerly: SPAN408F.

Additional Information: Taught in Spanish.

SPAN435 Ecuador: Andean Spaces-Traversing the Colonial City and the Natural World (3 Credits)

Introduces students to the history and cultures of Ecuador from the colonial period to the beginning of the 19th century. By studying the socio-spatial configuration of the colonial city as exemplified by Quito, students will be immersed in the art, architecture, and other rich cultural legacies of Ecuador. Quito, a World Heritage site, offers students visually stunning churches, monasteries, colonial squares, a famed tradition of Baroque painting and sculptures, and vibrant indigenous and mestizo communities. As a contrast, students will explore also travel narratives that represent the natural Andean world while visiting Quito's surrounding areas. This course will interrogate the European influence on urban design and representations of the landscape of the Americas. Understanding this colonial past enhances the understanding of the modern history of the Andean region and Latin America as a whole. The students will gain a full appreciation of the European and Indigenous living heritage that composes the region today. Taught in English.

Cross-listed with: ARTH472.

Credit Only Granted for: SPAN435, SPAN448E, ARTH472 or ARTH369E.

Formerly: SPAN448E and ARTH369E.

SPAN436 Representations of Childhood and Youth in Latin American Literature and Film (3 Credits)

Focuses on the representation of childhood and youth in films and works of fiction from various regions of the Spanish-speaking Americas, including Mexico, the Caribbean, the US, and Peru. We are going to read various short stories and novels, and watch two films, all of which develop in different ways the topics of childhood and youth. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

SPAN437 Love, Science, Religion and the Pursuit of Criollo Independence in 18th-Century Mexico (3 Credits)

Explores the 18th century from the periphery of traditionally studied centers of Enlightenment. By focusing on pre-independence Mexico, we will study the emergence of alternative scientific and religious discourses in an American context that leads to social and political changes at the onset of the 19th century. Students will watch the Mexican telenovela "Alborada" (2005-6), which fictionally explores many of the topics that are relevant for the course. Students will also read a variety of materials on the following subtopics: imperial designs, cultural production, inquisitional realities, medical discourse, individual and political rights, criollo consciousness, etc. All writing and discussion will be in Spanish. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN437 or SPAN408V.

Formerly: SPAN408V.

SPAN438 Special Topics in Colonial Latin America (3 Credits)

The conquest and colonization of the New World produced a textual corpus of invaluable importance for the foundation of Spanish American literary tradition. Special topics (themes, authors, debates, etc.) relevant to the Colonial period will be addressed.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Repeatable to: 9 credits if content differs.

SPAN440 Speaking Up/Out: Women Writers and Feminist Social Movements in Contemporary Latin America (3 Credits)

This seminar will explore how feminist subversion of naturalized power relationships has become a social force that is reshaping Latin American culture in the last several decades. Also, we will study how contemporary cultural artifacts contest value systems while rejecting entrenched hierarchies and norms. By reading contemporary women writers and by working on contemporary feminist social movements, this course will explore what the anthropologist Rita Segato has defined as "the war against women." Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

SPAN442 Detective Fiction in Latin America (3 Credits)

Focuses on Latin American detective fiction, including novels and short stories, whodunits and thrillers. Detective fiction's origins are primarily from outside of Latin America. Therefore the course will also include important texts from other traditions, including the US, English, and French. Taught in Spanish.

Prerequisite: SPAN303; and SPAN311 or SPAN316; and one from (SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363) or permission of instructor.

Credit Only Granted for: SPAN408T or SPAN442.

Formerly: SPAN408T.

SPAN448 Special Topics in Latin American Civilization (3 Credits)

Intensive independent study of a selected topic related to Latin American civilization.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Repeatable to: 6 credits if content differs.

SPAN449 Special Topics in Spanish Civilization (3 Credits)

An intensive study of a selected topic related to Spanish civilization.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Repeatable to: 6 credits if content differs.

SPAN450 The Hispanic Caribbean: What is a Beach? (3 Credits)

Explores the Hispanic Caribbean as "island spaces" of multiple migrations and cultural identities, as sites of colonial experiences and post-colonial debates.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Credit Only Granted for: SPAN408C or SPAN450.

Formerly: SPAN408C.

SPAN451 Paradise Lost: Cuban Cinematic Culture (3 Credits)

Explores the cinematic journey of the Cuban revolution from socialist utopia to bitter disillusionment. Taking as a point of departure the national postulates of an "Imperfect Cinema" and the different theorizations of "New Latin American cinema," the course will concentrate on the emergence and development of Cuban cinematic culture that has taken place during the revolution. Our objective is to explore how art and politics collide to reveal contested visions of a social process. Visual materials will include films and documentaries. Readings will include selections from historiographic and literary works, as well as contemporary critical studies. Taught in Spanish

Prerequisite: One course from SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN451 or SPAN408P.

Formerly: SPAN408P.

SPAN452 Reflecting on Neoliberalism and Contemporary Southern Cone Culture (3 Credits)

An exploration of how neoliberalism and its market-driven economy have shaped Latin American culture of the last decades. In particular, we will explore how contemporary cultural artifacts are inscribed into a value system that quantifies the unquantifiable, that is to say, a system that only values a book or an artist based on sales. In this class, we will work with a variety of cultural artifacts from Argentina, Chile, and Uruguay—films, chronicles, music, newspapers, cartoons, literature, and documentaries—to map how culture and markets intersect. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN452 or SPAN448T.

Formerly: SPAN448T.

SPAN453 Seeking Adventure and Glory: Don Quixote (3 Credits)

Widely acknowledged as the first modern novel, Don Quixote tells the story of a middle-aged Spanish gentleman who, obsessed with the chivalrous ideals found in romantic tales, decides to take up his lance and sword to defend the helpless and destroy the wicked. Seated upon his horse Rocinante and accompanied by his loyal squire Sancho Panza, Don Quixote sets out on the roads of Spain seeking adventure and glory. The course will consist of a close reading of Don Quixote. We will analyze and comment on the novel at the literal and historical levels, as well as in its symbolic and widely anthropological dimensions. We will also establish a dialogue between Don Quixote and the narrative and philosophical traditions of Europe, United States and Latin America. Taught in Spanish.

Prerequisite: One of the following: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN430 or SPAN453.

Formerly: SPAN430.

SPAN456 Construction of Gender and Sexuality in the Spanish Realist-Naturalist Novel (3 Credits)

Examines 19th-century Spanish normative notions regarding gender expression and identities as well as men's and women's sexualities in the Realist and Naturalist novel. Also, we will discuss representations of men and women whose behavior ran afoul of a heteronormative system that valued domestic privacy as a space of honor and virtuous masculinity and femininity. Taught in Spanish.

Prerequisite: One of the following: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Recommended: SPAN333.

SPAN457 Comedy, Foppery, and Foreignness in Eighteenth-Century Spain (3 Credits)

We will explore the comical and satirical elements in 18th-century Spanish literary works, situating them within the social and historical context of the aesthetic tastes of the Spanish reading public and how those tastes impacted the production of literature and other cultural artifacts. Taught in Spanish.

Prerequisite: One of the following: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Recommended: SPAN333.

SPAN460 The Sublime and the Grotesque in Spanish Romantic Plays and the Visual Arts (3 Credits)

An exploration of the notions of the sublime and the grotesque in theatrical works as well as in the visual arts of the Romantic movement in Spain. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

SPAN461 Queer Spain (3 Credits)

Explores discursive representations of Spaniards who were judged as non-normative by their society during the modern and contemporary period. Putting a critical lens to various cultural artifacts (visual arts, fiction, film, and journalism), we will interrogate what it means to be "(ab)normal" in terms of gender expression, erotic desire, sexuality, and anatomical sex in Spain at critical junctures in modern history. Taught in Spanish.

Prerequisite: One of the following: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362 or SPAN363; or permission of instructor.

Recommended: SPAN333.

Credit Only Granted for: SPAN408A or SPAN461.

Formerly: SPAN408A.

SPAN462 Twentieth Century Drama (3 Credits)

Significant plays of the twentieth century.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN463 Cultural Artifacts of Contemporary Spanish Crises from 1898 to the COVID Pandemic (3 Credits)

An overview of Spain from the end of the 19th century through the present day and studies some of its main crises. The course explores the production of literary, cultural, and cinematic texts in their sociohistorical, political, religious and cultural contexts and development. This interdisciplinary course covers topics such as political, historical, religious, racial, ethnic, gendered/sexual, cultural, and ethno-geographical, literary and cinematic diversities and differences in Contemporary Spain. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

SPAN464 Contemporary Spanish Poetry (3 Credits)

Spanish poetry from the generation of 1927 to the present.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN465 Spanish Exiles and Totalitarianisms (3 Credits)

An overview of the cultural and literary production regarding the Spanish Civil War (1936-1939) and its aftermath in the context of political exile from the early 20th century through present-day Spain. The course explores the production of literary texts in their sociohistorical, political, and cultural contexts and development as a reflection of that crisis in the conscience of present-day Spain. This interdisciplinary course covers topics such as political, historical, religious, racial, ethnic, gendered/sexual, cultural, and ethno-geographical diversities and differences concerning the Spanish Civil War and its aftermath. Taught in Spanish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Recommended: SPAN333.

SPAN466 The Contemporary Spanish Novel (3 Credits)

The novel and the short story from 1940 to the present.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN467 Visions and Fictions from Spain (3 Credits)

Overview of Spanish cinema from the end of the 19th century through present day Spain. Exploration of the production of literary and cinematic texts in their social, historical, political, religious, and cultural contexts.

Prerequisite: One course from SPAN331, SPAN332, SPAN333, SPAN361, SPAN362 or SPAN363; or permission of instructor.

Recommended: SPAN333.

Cross-listed with: CINE467.

Credit Only Granted for: CINE427, CINE467, FILM427, SPAN427, or SPAN467.

Formerly: FILM427, CINE427, and SPAN427.

SPAN468 Modernism and Post-Modernism in Spain and Spanish-America (3 Credits)

A study of the most important works and authors of both movements in Spain and Spanish-America.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Repeatable to: 9 credits if content differs.

SPAN469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

SPAN471 United States Latina Fiction (3 Credits)

An introduction to United States latina fiction through the study of short stories, novels, poetry, etc. It explores strategies of representation by women of color.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN472 Latina/o Communities and Language Struggles (3 Credits)

Explores the history of Latina/o communities and their language "choices," negotiations, and struggles in the United States, starting with the Spanish conquest of North America through the 21st century. We examine the lasting impact of the War of 1848 by which the U.S. colonized the southwest and consider how the Spanish-American War of 1898 imposed U.S. rule in the Hispanophone Caribbean. In this context of struggle, we examine how language repression and expression gave voice to the Latinx civil rights movements in the 1960s and 1970s as well as current immigration and education movements. Texts include Spanish crónicas, U.S. political treaties, the Hispanic press, manifestos, novels, poetry, spoken word, film, music, among others. Course format consists of lectures, discussions, group work, short essays, presentations, and examinations. Students should expect to participate in a community engagement project. Taught in Spanish and discussions in Spanglish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of the instructor.

Credit Only Granted for: SPAN408T or SPAN472.

Formerly: SPAN408T.

SPAN473 U.S. Latino Performance (3 Credits)

An introduction to United States Latino Performance texts by Chicano, Nuyorican, Cuban-American, Dominican, Central-American and others.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN474 Central American Literatures, Cultures, and Histories (3 Credits)

An overview of Central American history and cultural production, focusing primarily but not exclusively on literary texts.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

SPAN475 Central America: 21st-Century Literature & Culture (3 Credits)

Explores the discursive construction of Central America in the 21st century, from banana republic to northern triangle. While we study issues of violence, crime, femicide, impunity, corruption, migration, human and drug trafficking, and climate change, we will moreover focus on people's struggles for equality, human rights, environmental justice, food security, healthcare, education, and employment in the region. We seek to understand the root cause of local and global conditions in Central America as well as the creative and resilient ways that Central Americans respond to them. Texts include novels, short stories, crónicas, news, films, photography, and other re/sources. Course format consists of lectures, discussions, group work, short essays, presentations, and examinations. Students should expect to participate in a community engagement project. Taught in Spanish and discussions in Spanglish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN408L or SPAN475.

Formerly: SPAN408L.

SPAN476 Central Americans in the DMV (3 Credits)

Explores the history, migration, and cultural representation of Central Americans in the DMV (DC, Maryland, and Virginia) in the larger context of transnational relations between Central America and the United States. We ask how and why the DMV is home to one of the largest concentrations of Central Americans, especially Salvadorans, in the nation, as well as examine the diaspora as a transnational process. We study plays, short stories, poetry, spoken word/ performances, films, music, photography, zines, social media, and other interdisciplinary re/ sources, and engage one-on-one with local and international artists, activists, and community organizations. Course format consists of lectures, discussions, group work, short essays, presentations, and examinations. Students should expect to participate in a community engagement project. Taught in Spanish and discussions in Spanglish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN408W or SPAN476.

Formerly: SPAN408W.

SPAN477 Between Worlds: Central American Diasporas (3 Credits)

Examines Central America as a locus of diasporas, from its geological formation as an isthmus to the current movement of peoples across El Salvador, Guatemala, Nicaragua, Honduras, Costa Rica, Panama, Belize, and beyond. It offers a broadscale view of Central American societies, histories, (geo)politics, social and revolutionary movements, and cultural and literary production, and situates diasporic literature in relation to migration, war, genocide, violence, transnationalism, globalization, among others. Because the Washington, D.C. Metropolitan Area is a significant site of the Central American diasporas, we will explore our particular location and engage with local diasporic communities. Course format consists of lectures, discussions, group work, short essays, presentations, and examinations. Students should expect to participate in a community engagement project. Taught in Spanish and discussions in Spanglish.

Prerequisite: SPAN331, SPAN332, SPAN333, SPAN361, SPAN362, or SPAN363; or permission of instructor.

Credit Only Granted for: SPAN408R or SPAN477.

Formerly: SPAN408R.

SPAN478 Special Topics in United States Latino Cultures (3 Credits)

Explores special topics in US Latino Cultures, ranging from Chicano, Nuyorican, Cuban-American, Dominican, Central-American and other border cultural identities.

Prerequisite: SPAN333, SPAN361, SPAN331, SPAN332, SPAN362, or SPAN363.

Repeatable to: 9 credits if content differs.

SPAN479 Honors Thesis (3-6 Credits)

Researching and writing an honors thesis under the direction of a professor.

Restriction: Must be in Spanish and Portuguese Honors.

Repeatable to: 6 credits if content differs.

SPAN480 Spanish for Business II (3 Credits)

Business Spanish terminology, vocabulary and practice. Emphasis on everyday spoken and written Spanish. Readings and discussions of international topics. Cross-cultural considerations relative to international business operations, including exporting and banking. Taught in Spanish.

Prerequisite: Must have completed SPAN370.

Restriction: Sophomore standing or higher.

Credit Only Granted for: SPAN470 or SPAN480.

SPAN495 Honors Reading (3 Credits)

Supervised reading.

Prerequisite: Must be in Spanish and Portuguese Honors; or permission of ARHU-School of Languages, Literatures, and Cultures department.

SPAN605 Teaching Spanish I (1 Credit)

Methods and materials for teaching Spanish in higher education.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Restriction: Must be a Spanish teaching assistant.

SPAN608 Medieval Spanish Literature (3 Credits)

Specific authors, genres, and literary periods studied in depth.

SPAN609 Medieval Spanish Literature (3 Credits)

Specific authors, genres, and literary periods studied in depth.

SPAN610 The History of the Spanish Language (3 Credits)**SPAN611 Current Trends in Hispanic Applied Linguistics (3 Credits)**

Introduction to current trends in Hispanic Applied Linguistics, emphasizing learning and teaching in Spanish-language contexts.

Restriction: Permission of ARHU-Spanish & Portuguese Languages & Literatures department.

SPAN613 Bilingualism and Biculturalism in Spanish-Speaking Communities (3 Credits)

Exploration of Latino bilingual and bicultural communities, Spanglish, language variants, U.S. Latina/o literary and cultural production. Spanish highly recommended.

Restriction: Permission of ARHU-Spanish & Portuguese Languages & Literatures department.

SPAN618 Poetry of the Golden Age (3 Credits)

Analyses and studies in depth of specific works of specific poets in the sixteenth and seventeenth centuries.

SPAN619 Poetry of the Golden Age (3 Credits)

Analyses and studies in depth of specific works of specific poets in the sixteenth and seventeenth centuries.

SPAN622 Intercultural Communication and Negotiation (3 Credits)

Focuses on the relationship of language and culture and the negotiation of meaning within different speech communities. Students will learn concepts to describe how language is used in real communicative contexts and apply these to understand and use Spanish appropriately in different professional situations and environments. The course includes a research component. Taught in Spanish.

Jointly offered with: SPAN422.

Credit Only Granted for: SPAN422 or SPAN622.

SPAN625 Introduction to Hispanic Linguistics I: Basic Concepts (3 Credits)

Introduction to basic terms and definition in Hispanic Linguistics. Fundamental aspects of phonology, morphology, syntax, semantics, sociolinguistics, and pragmatics.

SPAN626 Hispanic Linguistics II: Language in Use (3 Credits)

This course will focus on issues related to language variation and use with a more in-depth analysis of the semantics, pragmatics, and sociolinguistics of Spanish. Students will be introduced to current research in the fields of dialectology, bilingualism and language policy, and the social aspects of language change. This course will include an analysis of current research as it relates to the field of linguistics and other social sciences.

Prerequisite: SPAN301; or permission of ARHU-School of Languages, Literatures, and Cultures department. Jointly offered with SPAN426.

Credit Only Granted for: SPAN426 or SPAN626.

SPAN628 Seminar: the Golden Age in Spanish Literature (3 Credits)**SPAN629 Seminar: the Golden Age in Spanish Literature (3 Credits)**

Specific authors, genres, literary movements and literary periods of the sixteenth and seventeenth centuries studied in depth.

SPAN698 Masterpieces of Hispanic Literatures (3 Credits)

Study of masterpieces of the hispanic literatures, topics, areas of literature and works to vary.

Repeatable to: 6 credits if content differs.

SPAN699 Independent Study in Spanish (1-3 Credits)

This course is designed to provide graduate students an opportunity to pursue independent study under the supervision of a member of the department.

Repeatable to: 3 credits.

SPAN708 The Eighteenth Century (3 Credits)

Specific authors, genres, and literary movements studied in depth.

SPAN718 The Nineteenth Century (3 Credits)

Specific authors, genres, and literary movements studied in depth.

SPAN719 The Nineteenth Century (3 Credits)

Specific authors, genres, and literary movements studied in depth.

SPAN728 The Twentieth Century (3 Credits)

Specific authors, genres and literary movements studied in depth.

SPAN729 The Twentieth Century (3 Credits)

Specific authors, genres and literary movements studied in depth.

SPAN738 The Drama of the Twentieth Century (3 Credits)

Specific authors and movements studied in depth.

SPAN788 Seminar Series in Spanish and Latin American Languages, Literatures, and Cultures (1-2 Credits)

Topics to be announced when course is offered.

Prerequisite: Permission of ARHU-School of Languages, Literatures, and Cultures department.

Repeatable to: 8 credits if content differs.

SPAN798 Open Seminar (3 Credits)**SPAN799 Master's Thesis Research (1-6 Credits)****SPAN808 Colonial Spanish-American Literature (3 Credits)**

Didactic and narrative prose and epic, dramatic and lyric poetry; principal works and authors.

SPAN809 Colonial Spanish American Literature (3 Credits)

Didactic and narrative prose; dramatic and lyric poetry.

SPAN818 National Spanish-American Literature (3 Credits)

Characteristics of the national literatures. Romantic and Costumbrista literature. Gauchismo and Indigenismo. Principal works and authors.

SPAN819 National Spanish American Literature (3 Credits)

Characteristics of the national literatures. Romantic and Costumbrista literature. Gauchismo and Indigenismo. Principal works and authors.

SPAN828 Hispanic Poetry of the Nineteenth and Twentieth Centuries (3 Credits)

Specific authors, genres and literary movements studied in depth.

SPAN829 Hispanic Poetry of the Nineteenth and Twentieth Centuries (3 Credits)

Specific authors, genres and literary movements studied in depth.

SPAN898 Pre-Candidacy Research (1-8 Credits)**SPAN899 Doctoral Dissertation Research (1-8 Credits)**

SPHL - Public Health

SPHL478 Special Topics in Public Health (1-4 Credits)

Special topics in the field of public health.

Repeatable to: 8 credits if content differs.

SPHL488 Children's Health and Development Clinic (1-4 Credits)

An opportunity to acquire training and experience in a therapeutically oriented physical education-recreation program for children referred by various education, special education, medical or psychiatric groups.

Prerequisite: Permission of SPHL-School of Public Health.

SPHL498 Special Topics in Public Health (3 Credits)

Topical and interdisciplinary courses of interest to upper level undergraduate students in the field of Public Health not currently covered by the program.

Restriction: Junior standing or higher.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: SPHL498 or SPHL698 of same suffix.

SPHL600 Foundations of Public Health (3 Credits)

An overview of the goals, functions, and methods of public health.

After an introduction to the core concepts and tools used in public health research and practice, applications of these methodologies are considered in the context of current controversies/problems in public health. Students work together to develop strategies for prevention and control that taken into consideration different points of view, outside research, and impacts on individuals and communities.

Restriction: Must be a graduate student within the School of Public Health.

Credit Only Granted for: SPHL100, PHSC300 or SPHL600.

SPHL601 Core Concepts in Public Health (1 Credit)

Introduces students to the history, functions, systems, policies, and models of public health practice in the United States and globally. The course offers seminars, interactive activities, and assessments aimed at establishing a baseline understanding of public health necessary for higher level and integrative learning in subsequent public health courses.

Restriction: Must be a Master's of Public Health (MPH) or Master's of Health Administration (MHA) student within the School of Public Health.

SPHL602 Foundations of Epidemiology and Biostatistics (4 Credits)

An introduction to conceptual and practical tools from epidemiology and biostatistics that are necessary for the study of public health problems. Students learn epidemiologic concepts and methods, and basic statistical concepts and procedures used in public health research through applications, hands-on experience, and interpretations of statistical findings.

Recommended: Recommend SPHL603 as a co-requisite course.

Restriction: Must be a graduate student within the School of Public Health.

Credit Only Granted for: SPHL602 or EPIB610 and EPIB650.

SPHL603 Public Health Data Laboratory (1 Credit)

An introduction to the statistical software necessary to implement the epidemiology and biostatistics concepts covered in the course EPIB 602, Foundations of Epidemiology and Biostatistics through hands-on exercises.

Corequisite: SPHL602.

Restriction: Must be a graduate student within the School of Public Health.

SPHL610 Program and Policy Planning, Implementation, and Evaluation (5 Credits)

This second course in the MPH/MHA integrated core sequence will prepare students to engage in the important tasks of assessing population and patient needs, implementing and evaluating culturally appropriate public health programs, policies, and interventions, and pursuing appropriate resources to support activities through the policy process and via effective use of power in the face of competing interests. The course will be a mix of individual and team-based assignments based upon an existing or newly identified problem, in addition to case studies, interactive simulations, and applied writing assignments.

Recommended: Completion of SPHL 601, 602, and 603 with a grade of B- or better in each. Note that completion of SPHL 601, 602, and 603 with a B- or better is a graduation requirement for the MPH/MHA degrees; and concurrent enrollment in SPHL 611.

Restriction: Must be in a graduate student in SPHL-School of Public Health.

SPHL611 Public Health Ethics (1 Credit)

Overview and discussion of ethical issues that face public health practitioners.

Prerequisite: Must have completed SPHL601; or permission of instructor.

Restriction: Must be a graduate student in the School of Public Health.

Credit Only Granted for: EPIB641, KNES689Y, or SPHL611..

Formerly: EPIB641, KNES689Y.

SPHL612 Research Ethics (1 Credit)

Overview and discussion of ethical issues that face public health researchers.

Restriction: Must be a graduate student in the School of Public Health.

Credit Only Granted for: EPIB641, KNES689Y or SPHL612.

Formerly: EPIB641, KNES689Y.

SPHL615 Crises of Aging: Time, Retirement and Widowhood (3 Credits)

A cross-disciplinary and multidisciplinary investigation of phenomena which comprise a significant portion of the issues confronting an older adult's life: (1) introduction to multiple processes of adulthood and aging; (2) the concepts and meaning of time; (3) pre-retirement and retirement adjustments; and (4) loss and widowhood.

Credit Only Granted for: HLHP615 or SPHL615.

Formerly: HLHP615.

SPHL620 Leadership, Teams, and Coalitions: Policy to Advocacy (2 Credits)

Students learn team building, leadership, and advocacy skills through the development and presentation of a policy brief on an urgent public health issue. The class will use a combination of brief lectures, discussions, and planned activities on how to develop a policy briefing. Students will have an inter-professional experience during which they will discuss possible approaches to developing policies on their public health issues while practicing team building skills. Class will culminate with presentation of policy briefs through a persuasive advocacy speech.

Prerequisite: Must have completed SPHL610.

Restriction: Must be a graduate student in the School of Public Health.

SPHL625 Issues of Retirement: Theory and Practice (3 Credits)

Multidisciplinary examination of retirement phenomena, including theories of transition, government and private sector policies, social expectations, physical correlates, personal adjustments, and economic consequences. Emphasis upon research utilization.

Credit Only Granted for: HLHP625 or SPHL625.

Formerly: HLHP625.

SPHL689 Selected Problems in Health, Physical Education and Recreation (1-6 Credits)

Research projects in special areas in health, physical education and/or recreation which have interdisciplinary implications not covered in structured courses.

Formerly: HLHP689.

SPHL698 Special Topics in Public Health (3 Credits)

Topical and interdisciplinary courses of interest to master and doctoral students in the field of Public Health not currently covered by the program.

Prerequisite: Permission of SPHL-School of Public Health.

SPHL780 Interdisciplinary Issues in Aging (3 Credits)

Multidisciplinary approaches to the processes of aging to achieve a more holistic understanding. Pedagogical research dissemination, peer instruction, guest lecturing, and informal discussion. The demonstration of the multilateral nature of growing older. Discussion of cross-disciplinary and interdisciplinary research proposals.

Credit Only Granted for: HLHP780 or SPHL780.

Formerly: HLHP780.

STAT - Statistics and Probability

STAT400 Applied Probability and Statistics I (3 Credits)

Random variables, standard distributions, moments, law of large numbers and central limit theorem. Sampling methods, estimation of parameters, testing of hypotheses.

Prerequisite: 1 course with a minimum grade of C- from (MATH131, MATH141); or students who have taken courses with comparable content may contact the department.

Cross-listed with: DATA400.

Credit Only Granted for: DATA400, ENEE324, or STAT400.

Additional Information: Not acceptable toward graduate degrees in MATH/STAT/AMSC.

STAT401 Applied Probability and Statistics II (3 Credits)

Point estimation - unbiased and consistent estimators. Interval estimation. Minimum variance and maximum likelihood estimators. Testing of hypotheses. Regression, correlation and analysis of variance. Sampling distributions. Elements of non-parametric methods.

Prerequisite: 1 course with a minimum grade of C- from (STAT400, STAT410).

Additional Information: Not acceptable toward graduate degrees in MATH/STAT/AMSC.

STAT410 Introduction to Probability Theory (3 Credits)

Probability and its properties. Random variables and distribution functions in one and several dimensions. Moments. Characteristic functions. Limit theorems.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and 1 course with a minimum grade of C- from (MATH340, MATH241).

Cross-listed with: SURV410.

Credit Only Granted for: STAT410 or SURV410.

STAT420 Theory and Methods of Statistics (3 Credits)

Point estimation, sufficiency, completeness, Cramer-Rao inequality, maximum likelihood. Confidence intervals for parameters of normal distribution. Hypothesis testing, most powerful tests, likelihood ratio tests. Chi-square tests, analysis of variance, regression, correlation. Nonparametric methods.

Prerequisite: 1 course with a minimum grade of C- from (SURV410, STAT410).

Cross-listed with: SURV420.

Credit Only Granted for: STAT420 or SURV420.

STAT422 Probability Models (3 Credits)

Random variables, Joint Distributions, Hierarchical Models, Random Samples, Algorithms for generating samples, Markov Chains, Poisson Processes, Stochastic Processes, Simulations.

Prerequisite: STAT400 or STAT410.

Credit Only Granted for: STAT498J or STAT422.

Formerly: STAT498J.

STAT426 Introduction to Data Science and Machine Learning (3 Credits)

An introductory course to the recent developments in the fields of data science and machine learning. Emphasis will be given to mathematical and statistical understanding of commonly used methods and processes.

Prerequisite: Minimum grade of C- in MATH241 or MATH340; and minimum grade of C- in MATH240, MATH461 or MATH341; and minimum grade of C- in STAT400 or STAT410; students who have taken courses with content comparable to STAT400/410 may request permission of the instructor.

Credit Only Granted for: STAT426 or CMSC320.

STAT430 Introduction to Statistical Computing with SAS (3 Credits)

Descriptive and inferential statistics. SAS software: numerical and graphical data summaries; merging, sorting and splitting data sets. Least squares, regression, graphics and informal diagnostics, interpreting results. Categorical data, lifetime data, time series. Applications to engineering, life science, business and social science.

Prerequisite: 1 course with a minimum grade of C- from (STAT400, STAT410); and must have completed or be concurrently enrolled in STAT401 or STAT420; students who do not meet the STAT401 or STAT420 requirement but who have taken a statistics course may contact the math department to confirm eligibility.

STAT440 Sampling Theory (3 Credits)

Simple random sampling. Sampling for proportions. Estimation of sample size. Sampling with varying probabilities. Sampling: stratified, systematic, cluster, double, sequential, incomplete.

Prerequisite: 1 course with a minimum grade of C- from (STAT401, STAT420).

Credit Only Granted for: STAT440 or SURV440.

STAT464 Introduction to Biostatistics (3 Credits)

Probabilistic models. Sampling. Some applications of probability in genetics. Experimental designs. Estimation of effects of treatments. Comparative experiments. Fisher-Irwin test. Wilcoxon tests for paired comparisons.

Prerequisite: Must have completed one semester of calculus.

Restriction: Junior standing or higher.

Credit Only Granted for: BIOE372 or STAT464.

Additional Information: Not acceptable toward degrees in MATH/STAT.

STAT470 Actuarial Mathematics (3 Credits)

Major mathematical ideas involved in calculation of life insurance premiums, including compound interest and present valuation of future income streams; probability distribution and expected values derived from life tables; the interpolation of probability distributions from values estimated at one-year multiples; the 'Law of Large Numbers' describing the regular probabilistic behavior of large populations of independent individuals; and the detailed calculation of expected present values arising in insurance problems.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and 1 course with a minimum grade of C- from (MATH340, MATH241).

Recommended: STAT400.

STAT498 Selected Topics in Statistics (1-6 Credits)

Topics of special interest to advanced undergraduate students will be offered occasionally under the general guidance of the MATH/STAT major committee. Students register for reading in statistics under this number.

Restriction: Permission of CMNS-Mathematics department.

Repeatable to: 16 credits.

STAT600 Probability Theory I (3 Credits)

Probability space; distribution functions and densities; Poisson limit theorem; de Moivre-Laplace theorem; measure-theoretic definition of expectation; classification of measures on \mathbb{R} ; convergence of random variables; Radon-Nikodym theorem; LP spaces; conditional probabilities; independence of events, sigma-algebras and random variables; Bayes' theorem; pi-systems and Dynkin systems; discrete Markov chains; random walks; gambler's ruin problem; Markov chains on a general phase space; Borel-cantelli lemmas; Kolmogorov inequality; three series theorem; laws of large numbers.

Prerequisite: STAT410.

STAT601 Probability Theory II (3 Credits)

Weak convergence of measures; characteristic functions; Central Limit Theorem and local limit theorem; stable laws; Kolmogorov consistency theorem (without proof); conditional expectations and martingales; optimal stopping theorem; convergence of martingales; Brownian motion; Markov processes and families; stochastic integral and Ito formula.

Prerequisite: STAT600.

STAT650 Applied Stochastic Processes (3 Credits)

Basic concepts of stochastic processes. Markov processes (discrete and continuous parameters), Random walks, Poisson processes, Birth and death processes. Renewal processes and basic limit theorems. Discrete time martingales, stopping times, optional sampling theorem. Applications from theories of stochastic epidemics, survival analysis and others.

Prerequisite: STAT410; or students who have taken courses with comparable content may contact the department.

STAT658 Advanced Applied Stochastic Processes II (3 Credits)

Advanced topics in applied stochastic processes, rotating among the headings of queueing theory, population processes, and regenerative phenomena. Course includes discussion of stochastic models and fields of application, Markov process theory including calculation and characterization of stationary distributions and diffusion approximations, renewal theory and Wiener-Hopf factorization theory.

Prerequisite: STAT650; and must have completed a graduate course in analysis. Or permission of instructor.

Recommended: STAT601 and STAT600.

Repeatable to: 6 credits if content differs.

STAT689 Research Interactions in Statistics (1-3 Credits)

The students participate in a vertically integrated (undergraduate, graduate and/or postdoctoral, faculty) research group. Format varies, but includes regular meetings, readings and presentations of material. See graduate program's online syllabus or contact the graduate program director for more information.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

STAT698 Selected Topics in Probability (1-4 Credits)**STAT700 Mathematical Statistics I (3 Credits)**

Sampling distributions including noncentral chi-squared, t, F. Exponential families, completeness. Sufficiency, factorization, likelihood ratio. Decision theory, Bayesian methods, minimax principle. Point estimation. Lehmann-Scheffe and Cramer-Rao theorems. Set estimation.

Prerequisite: STAT410; or students who have taken courses with comparable content may contact the department.

STAT701 Mathematical Statistics II (3 Credits)

Testing hypotheses: parametric methods. Neyman-Pearson lemma. Uniformly most powerful tests. Unbiased tests. Locally optimal tests. Large sample theory, asymptotically best procedures. Nonparametric methods, Wilcoxon, Fisher-Yates, median tests. Linear models, analysis of variance, regression and correlation. Sequential analysis.

Prerequisite: STAT700; or students who have taken courses with comparable content may contact the department.

STAT702 Survival Analysis (3 Credits)

Concepts/definitions of survival functions, hazard rate or hazard function, cumulative hazard functions, mean residual life, inversion formulas; Parametric models: exponential distribution, Weibull distribution; Censored/incomplete data and real data examples; right censored data, doubly censored data, interval censored data, truncated data; Nonparametric maximal likelihood estimator for the lifetime distribution under different types of censoring (e.g., Kaplan-Meier estimator), self-consistency estimators, the EM algorithm, applications of the empirical likelihood; Semiparametric models: accelerated lifetime model, proportional hazard model, the Cox model; Goodness of fit tests and diagnostic methods for model checking.

Prerequisite: STAT410 and STAT420; or students who have taken courses with comparable content may contact the department; or permission of instructor.

STAT705 Computational Statistics (3 Credits)

Modern methods of computational statistics and their application to both practical problems and research. S-Plus and SAS programming with emphasis on S-Plus. S-Plus objects and functions, and SAS procedures. Topics include data management and graphics, Monte Carlo and simulation, bootstrapping, numerical optimization in statistics, linear and generalized linear models, nonparametric regression, time series analysis.

Prerequisite: STAT700 or STAT420.

Recommended: Have some programming experience (any language).

Credit Only Granted for: STAT705 or STAT798C.

Formerly: STAT798C.

STAT707 Bayesian Statistics (3 Credits)

The essentials of Bayesian statistics with some advanced topics. Basic statistical decision theory. Bayesian paradigm. Prior and posterior distributions. Conjugate family. Hierarchical models. Bayesian linear regression. Bayes factors. Markov chain Monte Carlo. Metropolis-Hastings algorithm. Gibbs sampler. Bernstein von-Mise theorem. Posterior consistency. Potential advanced topics include variational Bayes, empirical Bayes, Bayesian inference of high-dimensional data and Bayesian non-parametric inference.

Prerequisite: STAT700; or permission of instructor .

Credit Only Granted for: STAT700 or STAT818B.

Formerly: STAT818B.

STAT730 Time Series Analysis (3 Credits)

The methodology of probabilistic description and statistical analysis of (primarily stationary) random sequences and processes. Correlation functions, Gaussian processes, Hilbert-space methods including Wold decomposition and spectral representation, periodogram and estimation of spectral densities, parameter estimation and model identification for ARMA processes, linear filtering, Kalman-Bucy filtering, sampling theorems for continuous-time series, multivariate time series.

Prerequisite: STAT700; and must have completed a graduate course in analysis. Or permission of instructor.

Recommended: STAT701 and STAT650.

STAT740 Linear Statistical Models I (3 Credits)

Least squares, general linear models, estimability and Gauss-Markov theorem. Simple and multiple linear regression, analysis of residuals and diagnostics, polynomial models, variable selection. Qualitative predictors, one and two way analysis of variance, multiple comparisons, analysis of covariance. Nonlinear least squares. High-level statistical computer software will be used for data analysis throughout the course.

Prerequisite: STAT700 or STAT420.

STAT741 Linear Statistical Models II (3 Credits)

Continuation of STAT 740. Multiway layouts, incomplete designs, Latin squares, complete and fractional factorial designs, crossed and nested models. Balanced random effects models, mixed models, repeated measures. General mixed model, computational algorithms, ML and REML estimates. Generalized linear models, logistic and loglinear regression.

Prerequisite: STAT740.

STAT750 Multivariate Analysis (3 Credits)

Multivariate normal, Wishart's and Hotelling's distributions. Tests of hypotheses, estimation. Generalized distance, discriminant analysis. Regression and correlation. Multivariate analysis of variance; distribution of test criteria. Principal components, canonical correlations and factor analysis.

Prerequisite: STAT700 or STAT420.

STAT770 Analysis of Categorical Data (3 Credits)

Loglinear and logistic models. Single classification, two-way classification; contingency tables; tests of homogeneity and independence models, measures of association, distribution theory. Bayesian methods. Incomplete contingency tables. Square contingency tables - symmetry. Extensions to higher dimensional contingency tables.

Prerequisite: STAT430 and STAT420; or permission of CMNS-Mathematics department.

STAT798 Selected Topics in Statistics (1-4 Credits)**STAT799 Master's Thesis Research (1-6 Credits)****STAT808 Selected Topics in Probability (1-3 Credits)**

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

STAT818 Selected Topics in Statistics (1-3 Credits)

Advanced topics of current interest.

Restriction: Permission of instructor.

Repeatable to: 18 credits.

STAT898 Pre-Candidacy Research (1-8 Credits)**STAT899 Doctoral Dissertation Research (1-8 Credits)**

SURV - Survey Methodology

SURV400 Fundamentals of Survey and Data Science (3 Credits)

The course introduces the student to a set of principles of survey and data science that are the basis of standard practices in these fields.

The course exposes the student to key terminology and concepts of collecting and analyzing data from surveys and other data sources to gain insights and to test hypotheses about the nature of human and social behavior and interaction. It will also present a framework that will allow the student to evaluate the influence of different error sources on the quality of data.

Prerequisite: STAT100; or permission of BSOS-Joint Program in Survey Methodology department.

Restriction: Course open to SURV certificate students, SURV Advanced Special Students, and SURV undergraduate minors. Graduate students from other departments may enroll with permission from the department.

Credit Only Granted for: SURV699M or SURV400.

Formerly: SURV699M.

SURV410 Introduction to Probability Theory (3 Credits)

Probability and its properties. Random variables and distribution functions in one and several dimensions. Moments. Characteristic functions. Limit theorems.

Prerequisite: 1 course with a minimum grade of C- from (MATH240, MATH461, MATH341); and 1 course with a minimum grade of C- from (MATH340, MATH241).

Cross-listed with: STAT410.

Credit Only Granted for: STAT410 or SURV410.

SURV420 Theory and Methods of Statistics (3 Credits)

Point estimation, sufficiency, completeness, Cramer-Rao inequality, maximum likelihood. Confidence intervals for parameters of normal distribution. Hypothesis testing, most powerful tests, likelihood ratio tests. Chi-square tests, analysis of variance, regression, correlation. Nonparametric methods.

Prerequisite: 1 course with a minimum grade of C- from (SURV410, STAT410).

Cross-listed with: STAT420.

Credit Only Granted for: STAT420 or SURV420.

SURV430 Fundamentals of Questionnaire Design (3 Credits)

Introduction to the scientific literature on the design, testing and evaluation of survey questionnaires, together with hands-on application of the methods discussed in class.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

Credit Only Granted for: SURV430 or SURV630.

SURV440 Sampling Theory (3 Credits)

Simple random sampling, sampling for proportions, estimation of sample size, sampling with varying probabilities of selection, stratification, systematic selection, cluster sampling, double sampling, and sequential sampling.

Prerequisite: STAT401 or STAT420.

Credit Only Granted for: STAT440 or SURV440.

SURV600 Fundamentals of Survey and Data Science (3 Credits)

Introduces the student to a set of principles of survey and data science that are the basis of standard practices in these fields. The course exposes the student to key terminology and concepts of collecting and analyzing data from surveys and other data sources to gain insights and to test hypotheses about the nature of human and social behavior and interaction. It will also present a framework that will allow the student to evaluate the influence of different error sources on the quality of data.

Prerequisite: Any University of Maryland approved college-level statistics course.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department; and must have graduate student status.

Credit Only Granted for: SURV699M, SURV400 or SURV600.

SURV611 Review of Statistical Concepts (3 Credits)

Basics of probability and statistics. Students will review basic probability concepts and probability distributions, the Central Limit Theorem and hypothesis testing, and linear and logistic regression. Throughout this course, students should develop and reinforce proper statistical intuition. This includes knowing how to identify a sample and a population and applying appropriate statistical methods such as hypothesis testing, as well being able to identify different types of data and using the proper methods for each type of data. By the end of the course, students should have a strong foundation in statistics with which they can start their graduate coursework.

Credit Only Granted for: SURV699M or SURV611.

Formerly: SURV699M.

SURV612 Ethical Considerations for Data Science Research (1 Credit)

The goal of research ethics is to protect human subjects from harm when they participate in a study. In the digital age, however, what constitutes "participation" has become blurry, especially with the rise of social media platforms and other online apps and services. Furthermore, new applications of big data raise important questions about how to protect consumers from harms, and what kinds of notice and consent should be obtained. This course provides an introduction and overview of research ethics in the 21st century and evaluates the many challenges to conducting ethical research.

Credit Only Granted for: SURV699A or SURV612.

Formerly: SURV699A.

SURV613 Machine Learning for Social Science (3 Credits)

Introduction to supervised statistical learning techniques such as decision trees, random forests and boosting and discusses their potential application in the social sciences. These methods focus on predicting an outcome Y based on some learned function $f(X)$ and therefore facilitate new research perspectives in comparison with traditional regression models, which primarily focus on causation. Predictive methods also provide a valuable extension to the empirical social scientists' toolkit as new data sources become more prominent. In addition to introducing supervised learning methods, the course will include practical sessions to exemplify how to tune and evaluate prediction models using the statistical programming language R.

Recommended: Students are encouraged to work through one or more R tutorials prior or during the first weeks of the course. Some resources are listed on the syllabus.

Credit Only Granted for: SURV613 or SURV699U.

Formerly: SURV699U.

SURV615 Statistical Modeling and Machine Learning I (3 Credits)

This is the first course in a two-term sequence in applied statistical methods and machine learning that are the basis in handling complex datasets. The topics covered include: overview on the quantitative research, linear regression, analysis of variance, inference, prediction, model diagnostics and selection and resampling methods. The emphasis will be to understand and apply the methods.

Prerequisite: Must have basic R Programming skills; and must have completed a two course sequence in probability and statistics; or students who have comparable content may contact the department for permission.

Restriction: Must be in Survey Methodology (Master's) program; or permission of instructor.

SURV616 Statistical Modeling and Machine Learning II (3 Credits)

Build on material presented in Statistical Methods and Machine Learning I. Topics include: categorical data analysis, logistic regression, model selection for inference and prediction, classification using K-means and neural networks, survival analysis, principal components, and factor analysis.

Prerequisite: SURV615.

SURV617 Applications of Statistical Modeling (3 Credits)

Designed for students on both the social science and statistical tracks for the two programs in survey methodology, will provide students with exposure to applications of more advanced statistical modeling tools for both substantive and methodological investigations that are not fully covered in other MPSM or JPMS courses. Modeling techniques to be covered include multilevel modeling (with an application to methodological studies of interviewer effects), structural equation modeling (with an application of latent class models to methodological studies of measurement error), classification trees (with an application to prediction of response propensity), and alternative models for longitudinal data (with an application to panel survey data from the Health and Retirement Study). Discussions and examples of each modeling technique will be supplemented with methods for appropriately handling complex sample designs when fitting the models. The class will focus on practical applications and software rather than extensive theoretical discussions.

Prerequisite: SURV615 and SURV616; or permission of instructor.

Credit Only Granted for: SURV617, SURV746, or SURV699R.

Formerly: SURV699R and SURV746.

SURV621 Fundamentals of Data Collection I (3 Credits)

First semester of a two-semester sequence that provides a broad overview of the processes that generate data for use in social science research. Students will gain an understanding of different types of data and how they are created, as well as their relative strengths and weaknesses. A key distinction is drawn between data that are designed, primarily survey data, and those that are found, such as administrative records, remnants of online transactions, and social media content. The course combines lectures, supplemented with assigned readings, and practical exercises. In the first semester, the focus will be on the error that is inherent in data, specifically errors of representation and errors of measurement, whether the data are designed or found. The psychological origins of survey responses are examined as a way to understand the measurement error that is inherent in answers. The effects of the mode of data collection (e.g., mobile web versus telephone interview) on survey responses also are examined.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV622 Fundamentals of Data Collection II (3 Credits)

This is the second course in a two-semester sequence that provides a broad overview of the processes that generate data for use in social science research. Students will gain an understanding of different types of data and how they are created, as well as their relative strengths and weaknesses. A key distinction is drawn between data that are designed, primarily survey data, and those that are found, such as administrative records, remnants of online transactions, and social media content. The course combines lectures, supplemented with assigned readings, and practical exercises. The second semester builds on the discussion of survey mode during the first semester, considering the role played by interviewers in telephone and in-person surveys and their effects on the data collected. Students next are introduced to the methods for extracting and re purposing found data for social science research. Methods for the classification of text, with an emphasis on automated coding methods, are introduced and selected applications considered (e.g., coding of open-ended survey responses, classification of the sentiments expressed in social media posts). Issues in using survey data and administrative records to measure change over time (longitudinal comparisons) are explored. The term concludes with an examination of methods for evaluating the quality of both designed and found data.

Prerequisite: Permission of Instructor required; or fundamentals of Data Collection I.

SURV623 Data Collection Methods in Survey Research (3 Credits)

Review of alternative data collection methods used in surveys, such as current advances in computer-assisted telephone interviewing (CATI), computer-assisted personal interviewing (CAPI), and other methods such as touchtone data entry (TDE) and voice recognition (VRE).

Prerequisite: SURV400; or students who have taken courses with comparable content may contact the department.

SURV624 Privacy Law (1 Credit)

To acquaint the students with the origins and basic principles of privacy law mainly in Europe. Furthermore, it will contrast the European privacy foundations with the U.S. approach. At the core of this course stands the new European General Data Protection Regulation (GDPR) and its applicability to specific cases and basic principles. Moreover, the course will cover current challenges to the existing privacy paradigms by big data and big data analytics.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV625 Applied Sampling (3 Credits)

Practical aspects of sample design. Topics include: probability sampling (including simple random, systematic, stratified, clustered, multistage and two-phase sampling methods), sampling with probabilities proportional to size, area sampling, telephone sampling, ratio estimation, sampling error estimation, frame problems, nonresponse, and cost factors.

Prerequisite: Must have completed a course in statistics approved by department.

SURV626 Sampling (2 Credits)

Practical aspects of sample design. The course will cover the main techniques used in sampling practice: simple random sampling, stratification, systematic selection, cluster sampling, multistage sampling, and probability proportional to size sampling. The course will also cover sampling frames, cost models, and sampling error (variance) estimation techniques.

Prerequisite: Permission of BSOS-Joint Program in Survey Methodology department; and must have taken at least a graduate level statistics course or an undergraduate level advanced statistics course.

SURV627 Experimental Design and Causal Inference (2 Credits)

Many of the questions we are interested in as researchers and practitioners are of a causal nature. We act upon the world; how can we tell if our actions have impact? How can we decide if an intervention would get us closer to our goals? In this course, we introduce the basic concepts from causal inference and econometrics, and show what makes a valid causal claim, and what would undo it. We then demonstrate how experiments can be used to evaluate causal hypotheses, and what options are available to conduct experiments in practice. Having discussed experimental data collection, we turn to the analysis of experiments, show how this, again, is linked to the logic of causal inference, and how to work with experimental data. We discuss how to design studies so that statistical inferences are informative and reliable. Next, we cover situations in which experiments might not be possible, and show how these can be addressed through study design ex ante and ex post through analysis.

Prerequisite: Basic knowledge of data analysis. Familiarity with the R programming language and the RStudio IDE.

Recommended: Experience in the use of SAS or STATA statistical analysis software.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV630 Questionnaire Design and Evaluation (3 Credits)

The stages of questionnaire design; developmental interviewing, question writing, question evaluation, pretesting, and questionnaire ordering and formatting. Reviews of the literature on questionnaire construction, the experimental literature on question effects, and the psychological literature on information processing. Examination of the diverse challenges posed by self versus proxy reporting and special attention is paid to the relationship between mode of administration and questionnaire design.

Restriction: Must be in the Survey and Data Science Doctoral or Master's Program, or the Applied Political Analytics Master's Program; or permission of the Joint Program in Survey Methodology.

Credit Only Granted for: SURV430 and SURV630.

SURV631 Questionnaire Design (2 Credits)

This course introduces students to the stages of questionnaire development. The course reviews the scientific literature on questionnaire construction, the experimental literature on question effects, and the psychological literature on information processing. It will also discuss the diverse challenges posed by self- versus proxy-reporting and special attention is paid to the relationship between mode of administration and questionnaire design. Students will also get hands-on experience in developing their own questionnaire.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV632 Cognition, Communication and Survey Measurement (3 Credits)

Major sources of survey error-such as reporting errors and nonresponse bias-from the perspective of social and cognitive psychology and related disciplines. Topics: psychology of memory and its bearing on classical survey issues (e.g., underreporting and telescoping); models of language use and their implications for the interpretation and misinterpretation of survey questions; and studies of attitudes, attitude change, and their possible application to increasing response rates and improving the measurement of opinions. Theories and findings from the social and behavioral sciences will be explored.

SURV635 Usability Testing for Survey Research (1 Credit)

Introduces the concepts of usability and usability testing and why they are needed for survey research. The course provides a theoretical model for understanding the respondent-survey interaction and then provides practical methods for incorporating iterative user-centered design and testing into the survey development process. The course provides techniques and examples for designing, planning, conducting and analyzing usability studies on web or mobile surveys

Recommended: Students should be familiar with the basics of questionnaire design. Experience with cognitive testing is a plus, but not a requirement.

Restriction: Must be in a major within the BSOS-Joint Program in Survey Methodology department; or permission of BSOS-Joint Program in Survey Methodology department.

SURV636 Sampling II (1 Credit)

Different applications of the methods and techniques covered in the Sampling I course. This is also an applied statistics methods course concerned almost exclusively with the design of data collection rather than data analysis. The course will concentrate on sampling applications to human populations, since this poses a number of particular problems not found in sampling of other types of units. The principles of sample selection, though, can be applied to many other types of populations.

Prerequisite: SURV626 or equivalent.

Recommended: Some experience with the R statistical computing software.

Repeatable to: 1 credit.

SURV640 Survey Practicum I (2 Credits)

First part of an applied workshop in sample survey design, implementation, and analysis. Problems of moving from substantive concepts to questions on a survey questionnaire, designing a sample, pretesting and administering the survey.

Restriction: Must be in one of the following programs (Survey Methodology (Doctoral); Survey Methodology (Master's)) ; or permission of instructor.

Credit Only Granted for: SURV620 or SURV640.

Formerly: SURV620.

Additional Information: SURV640 and SURV641 must be taken in consecutive semesters.

SURV641 Survey Practicum II (2 Credits)

Second part of applied workshop in sample survey design. Course focus on post data collection process of data processing, editing and analysis.

Prerequisite: SURV620.

Restriction: Must be in one of the following programs (Survey Methodology (Doctoral); Survey Methodology (Master's)).

Credit Only Granted for: SURV621 or SURV641.

Formerly: SURV621.

Additional Information: SURV640 and SURV641 must be taken in consecutive semesters.

SURV642 Project Consulting (6 Credits)

Students will apply the core skills that they learned in the IPSDS program to address real-world problems. The course will provide experience with the steps involved in carrying out a data consulting project, such as discussing the problems to solve with a client, data handling, and communicating work in both written and oral forms. The project is completed in teams (3-4 students per team).

Prerequisite: SURV703; and background knowledge in programming in Python and SQL structures.

Recommended: SURV736.

SURV650 Economic Measurement (3 Credits)

An introduction to the field of economic measurement. Sound economic data are of critical importance to policymakers, the business community, and others. Emphasis is placed on the economic concepts that underlie key economic statistics and the translation of those concepts into operational measures. Topics addressed include business survey sampling; the creation of business survey sampling frames; the collection of data from businesses; employment and earnings statistics; price statistics; output and productivity measures; the national accounts; and the statistical uses of administrative data. Lectures and course readings assume prior exposure to the tools of economic analysis.

Prerequisite: Must have completed a course in intermediate microeconomics.

Credit Only Granted for: SURV650 or SURV699L.

Formerly: SURV699L.

SURV656 Web Survey Methodology (2 Credits)

Fundamental concepts of web surveys and web survey design. The course is organized in 3 main sections which follow the way a proper web survey is organized: prefielding, fielding and post fielding.

Prerequisite: Must have completed SURV400; or must have completed SURV623; or permission of instructor. And permission of BSOS-Joint Program in Survey Methodology department.

SURV662 An Introduction to Small Area Estimation Methods (1 Credit)

There is a growing demand to produce reliable estimates of various socio-economic and health characteristics at both national and sub-national levels. However, data availability at the sub-national (small area) level from a survey is often limited by cost and thus analysts must make the best possible use of all available information. The course will begin with a history of small-area estimation and different uses of small-area statistics in both public and private sectors. This course will provide an introduction to the main concepts and issues in small estimation and describes various approaches for estimating different small area parameters. Topics include standard design-based methods, various traditional indirect methods and the state-of-the-art small-area estimation methods that use both Bayesian and empirical best prediction methods. Monte Carlo simulation results and data analysis using available statistical software will be presented.

Prerequisite: STAT400 and STAT401.

Restriction: Permission of instructor.

SURV665 Introduction to Real World Data Management (2 Credits)

Data is omnipresent in the contemporary world coming in different shapes and sizes: from survey data to found data. In order to make use of such data through analysis it is necessary first to import and clean it. This is often one of the most time consuming and difficult parts of data analysis. In this course you will learn both the conceptual steps needed in preparing data for analysis as well as the practical skills to do this. The course will cover all the essential skills needed to prepare data be it survey data, administrative data or found data.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV667 Introduction to Record Linkage with Big Data Applications (2 Credits)

Methods to combine data on given entities (people, households, firms etc.) that are stored in different data sources. By showing the strengths of these methods and by showing how each of them are performed in practice using R, the course will demonstrate the various benefits of record linkage. Participants will also learn about potential challenges that record linkage projects may face.

Prerequisite: Basic statistical concepts; and intermediate knowledge of R.

Recommended: Familiarity with regular expressions, the R packages ggplot2 and tidyverse.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV673 Introduction to Python and SQL (1 Credit)

Basics of Python and SQL for data analysis. Students will explore real publicly-available datasets, using the data analysis tools in Python to create summaries and generate visualizations. Students will learn the basics of database management and organization, as well as learn how to code in SQL and work with PostgreSQL databases. By the end of the class, students should understand how to read in data from CSV files or from the internet and become comfortable using either SQL or Python to aggregate, summarize, describe, and visualize these datasets.

Recommended: Background knowledge in programming in Python and SQL structures.

SURV675 Modern Workflows in Data Science (2 Credits)

Large data, fast pace of production, and collaboration are hallmarks of the new data environment. In this context, researchers must have a good understanding of data workflows and they must ensure consistent and reproducible practices in order to collaborate and consistently produce insights. This course deals with some of these essential topics. We will discuss the main types of workflows in data and survey sciences and how tools such as GitHub can enhance collaboration and ensure reproducibility. We will also discuss the use of reproducible documents such as Rmarkdown or Jupyter Notebooks before covering how to work with distributed data using Spark. We will finish the course by discussing the use of dashboards and how to develop such tools using R Shiny.

Prerequisite: SURV665.

Recommended: R or a good knowledge of R base and tidyverse.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

Credit Only Granted for: SURV699Y or SURV675.

Formerly: SURV699Y.

SURV699 Special Topics in Survey Methodology (1-6 Credits)

Credit according to time scheduled and organization of the course.

Organized as a lecture series on specialized advanced topics in survey methodology.

Prerequisite: Must have completed a graduate-level course in statistics or quantitative methods; and must have familiarity with survey research methods.

SURV701 Analysis of Complex Sample Data (3 Credits)

Analysis of data from complex sample designs covers: the development and handling of selection and other compensatory weights; methods for handling missing data; the effect of stratification and clustering on estimation and inference; alternative variance estimation procedures; methods for incorporating weights, stratification and clustering, and imputed values in estimation and inference procedures for complex sample survey data; and generalized design effects and variance functions. Computer software that takes account of complex sample design in estimation.

Prerequisite: SURV625.

SURV702 Analysis of Complex Survey Data (2 Credits)

The development and handling of selection and other compensatory weights for survey data analysis; the effects of stratification and clustering on survey estimation and inference; alternative variance estimation procedures for estimated survey statistics; methods and computer software that take into account the effects of complex sample designs on survey estimation and inference; and methods for handling missing data, including weighting adjustment and imputation.

Prerequisite: One or more graduate courses in statistics covering techniques through OLS and logistic regression, a course in applied sampling methods.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV703 Computer-Based Content Analysis I (1 Credit)

Investigate the foundations of Natural Language Processing (NLP) as a tool for analyzing natural language texts in the social sciences, thus providing an alternative to traditional ways of data generation through surveys. The course introduces general use cases for NLP, provides a guide to standard operations on text as well as their implementation in the Python-based Natural Language Toolkit (NLTK) and introduces the text mining functionalities of the WEKA Machine Learning workbench. The theory part of the course worth one credit can be supplemented by an optional project part worth another credit point.

Prerequisite: Background knowledge in programming in Python and SQL structures.

Recommended: SURV736.

SURV704 Computer-Based Content Analysis II (1 Credit)

Investigates the foundations of Natural Language Processing (NLP) as a tool for analyzing natural language texts in the social sciences, thus providing an alternative to traditional ways of data generation through surveys. The course introduces general use cases for NLP, provides a guide to standard operations on text as well as their implementation in the Python-based Natural Language Toolkit (NLTK) and introduces the text mining functionalities of the WEKA Machine Learning workbench. The theory part of the course worth one credit can be supplemented by an optional project part worth another credit point.

Prerequisite: SURV703; and background knowledge in programming in Python and SQL structures.

Recommended: SURV736.

SURV706 General Linear Models (2 Credits)

The main focus of this course lies on the introduction to statistical models and estimators beyond linear regression useful to social and economic scientists. It provides an overview of generalized linear models (GLM) that encompass non-normal response distributions to model functions of the mean. GLMs thus relate the expected mean $E(Y)$ of the dependent variable to the predictor variables via a specific link function. This link function permits the expected mean to be non-linearly related to the predictor variables. Examples for GLMs are the logistic regression, regressions for ordinal data, or regression models for count data. GLMs are generally estimated by use of maximum likelihood estimation. The course thus not only introduces GLMs but starts with an introduction to the principle of maximum likelihood estimation.

Recommended: Sound understanding of Linear Regression Models, Calculus and Linear Algebra.

Restriction: Must have permission of BSOS-Joint Program in Survey Methodology.

Credit Only Granted for: SURV706 or SURV699J.

Formerly: SURV699J.

SURV720 Total Survey Error and Data Quality I (2 Credits)

Total error structure of sample survey data, reviewing current research findings on the magnitudes of different error sources, design features that affect their magnitudes, and interrelationships among the errors. Coverage, nonresponse, sampling, measurement, and postsurvey processing errors. For each error source reviewed, social science theories about its causes and statistical models estimating the error source are described. Empirical studies from the survey methodological literature are reviewed to illustrate the relative magnitudes of error in different designs. Emphasis on aspects of the survey design necessary to estimate different error sources. Relationships to show how attempts to control one error source may increase another source. Attempts to model total survey error will be presented.

Prerequisite: SURV625.

Restriction: Permission of instructor.

Credit Only Granted for: (SURV720 and SURV721) or SURV723.

Formerly: SURV723.

SURV721 Total Survey Error and Data Quality II (2 Credits)

Second part of a review of total survey error structure of sample survey data. Reviewing current research findings on the magnitudes of different error sources. Students will continue work on an independent research project which provides empirical investigation of one or more error source. An analysis paper presenting findings of the project will be submitted at the end of the course.

Prerequisite: SURV720.

Restriction: Permission of instructor.

Credit Only Granted for: (SURV720 and SURV721) or SURV723.

Formerly: SURV723.

SURV722 Research Design: Causal inference from randomized and observational data (3 Credits)

Research designs from which causal inferences are sought. Classical experimental design will be contrasted with quasi-experiments, evaluation studies, and other observational study designs. Emphasis placed on how design features impact the nature of statistical estimation and inference from the designs. Issues of blocking, balancing, repeated measures, control strategies, etc.

Restriction: Must be in Survey Methodology (Doctoral) program; or must be in Survey Methodology (Master's) program; or must be in a major within the BSOS-Joint Program in Survey Methodology department; or permission of BSOS-Joint Program in Survey Methodology department.

SURV725 Item Nonresponse and Imputation (1 Credit)

Missing data are a common problem which can lead to biased results if the missingness is not taken into account at the analysis stage. Imputation is often suggested as a strategy to deal with item nonresponse allowing the analyst to use standard complete data methods after the imputation. However, several misconceptions about the aims and goals of imputation make some users skeptical about the approach. In this course we will illustrate why thinking about the missing data is important and clarify which goals a useful imputation method should try to achieve.

Prerequisite: Be comfortable with generalized linear models and basic probability theory through coursework or work experience; and familiarity with the statistical software R.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV726 Multiple Imputation (1 Credit)

This course will provide a detailed introduction to multiple imputation, a convenient strategy for dealing with (item) nonresponse in surveys. We will motivate the concept and illustrate why multiple imputation should generally be preferred over single imputation methods. The main focus of the course will be on strategies to generate (multiple) imputations and how to deal with common problems when applying the methods for large scale surveys. We will also discuss various options for assessing the quality of the imputations. All concepts will be demonstrated using software illustrations in R.

Prerequisite: Be comfortable with generalized linear models and basic probability theory through coursework or work experience; and familiarity with the statistical software R; and must have completed Surv 725 Item Nonresponse and Imputation or be familiar with the content through relevant work experience.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV727 Fundamentals of Computing and Data Display (3 Credits)

The first part of this course provides an introduction to web scraping and APIs for gathering data from the web and then discusses how to store and manage (big) data from diverse sources efficiently. The second part of the course demonstrates techniques for exploring and finding patterns in (non-standard) data, with a focus on data visualization. The course focuses on R as the primary computing environment, with excursus into SQL and Big Data processing tools.

Restriction: Must be in a major within the BSOS-Joint Program in Survey Methodology department; or permission of BSOS-Joint Program in Survey Methodology department.

Additional Information: Students without any R knowledge are encouraged to work through one or more R web tutorials prior or during the first weeks of the course.

SURV730 Measurement Error Models (1 Credit)

Measurement error in survey data can significantly distort analyses of substantive interest. Means, totals, and proportions will be off if the average answer people give is inaccurate. However, measurement error distorts not only estimates of means but can also severely bias apparent relationships, conditional probabilities, means differences, and other regression-type analyses. To remove such biases it is therefore essential to estimate the extent of measurement error in survey variables. This can be done using a gold standard or, in the absence of such a standard, modeling the error. This course introduces the latter and trains students to perform regression analyses without the influence of measurement error.

Prerequisite: SURV623 or SURV630; or have equivalent survey research experience. And must have completed a basic statistics course in regression modeling.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV732 Practical Inference from Complex Surveys (2 Credits)

Inference from complex sample surveys covers the theoretical and empirical properties of various variance estimation strategies (e.g., Taylor series approximation, replicated methods, and bootstrap methods for complex sample designs) and how to incorporate those methods into inference for complex sample survey data. Variance estimation procedures are applied to descriptive estimators and to analysis techniques such as regression and analysis of variance. Generalized variances and design effects are presented. Methods of model-based inference for complex sample surveys are also discussed, and the results contrasted to the design-based type of inference used as the standard in the course. The course will use real survey data to illustrate the methods discussed in class. Students will learn the use of computer software that takes account of the sample design in estimation.

Prerequisite: SURV440, SURV626, STAT401, or SURV699J; or permission of BSOS-Joint Program in Survey Methodology.

Recommended: A sound understanding of linear regression models (OLS), knowledge in linear algebra and calculus is important, as is previous exposure to complex sample designs and common estimation procedures. Previous exposure to maximum likelihood estimation is assumed, but students may meet this requirement by taking the course b online program previously or concurrently.

SURV735 Data Privacy and Data Confidentiality (2 Credits)

This course will provide a gentle introduction to statistical disclosure control with a focus on generating synthetic data for maintaining the confidentiality of the survey respondents. The first part of the course will introduce several traditional approaches for data protection that are widely used at statistical agencies. Some limitations of these approaches will also be discussed. The second part of the course will introduce synthetic data as a possible alternative. This part of the course will discuss different approaches to generating synthetic datasets in detail. Possible modeling strategies and analytical validity evaluations will be assessed and potential measures to quantify the remaining risk of disclosure will be presented. To provide the participants with hands on experience, all steps will be illustrated using simulated and real data examples in R.

Prerequisite: Must have familiarity with the statistical software R; and must have completed a basic statistics course in regression modeling.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV736 Introduction to Web Scraping with R (1 Credit)

Provides a condensed overview of web technologies and techniques to collect data from the web in an automated way. To this end, students will use the statistical software R. The course introduces fundamental parts of web architecture and data transmission on the web. Furthermore, students will learn how to scrape content from static and dynamic web pages and connect to APIs from popular web services. Finally, practical and ethical issues of web data collection are discussed.

Prerequisite: Students are expected to be familiar with the statistical software R.

Recommended: Knowledge about the ?tidyverse? packages, in particular, dplyr, plyr, magrittr, and stringr.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV740 Fundamentals of Inference (3 Credits)

Focuses on the fundamentals of statistical inference in the finite population setting. Overview and review fundamental ideas of making inferences about populations. Basic principles of probability sampling; focus on differences between making predictions and making inferences; explore the differences between randomized study designs and observational studies; consider model-based vs. design-based analytic approaches; review techniques designed to improve efficiency using auxiliary information; and consider non-probability sampling and related inferential techniques.

Prerequisite: SURV410 and SURV420; or (SURV615 and SURV616); or permission of Instructor required.

Restriction: Must be in a major within the BSOS-Joint Program in Survey Methodology department; or permission of BSOS-Joint Program in Survey Methodology department.

SURV742 Inference from Complex Surveys (3 Credits)

Inference from complex sample survey data covering the theoretical and empirical properties of various variance estimation strategies (e.g., Taylor series approximation, replicated methods, and bootstrap methods for complex sample designs). Incorporation of those methods into inference for complex sample survey data. Variance estimation procedures applied to descriptive estimators and to analysis of categorical data. Generalized variances and design effects presented. Methods of model-based inference for complex sample surveys examined, and results contrasted to the design-based type of inference used as the standard in the course. Real survey data illustrating the methods discussed. Students will learn the use of computer software that takes account of the sample design in estimation.

Prerequisite: SURV440.

SURV744 Topics in Survey Methodology (3 Credits)

Advanced course in survey sampling theory.

Prerequisite: SURV440.

SURV745 Practical Tools for Study Design and Inference (3 Credits)

A statistical methods class appropriate for second year Master's students and PhD students. The course will be a combination of hands-on applications and general review of the theory behind different approaches to sampling and weighting. Topics covered include sample size calculations using estimation targets based on relative standard error, margin of error, and power requirements. Use of mathematical programming to determine sample sizes needed to achieve estimation goals for a series of subgroups and analysis variables. Resources for designing area probability samples. Methods of sample allocation for multistage samples. Steps in weighting, including computation of base weights, non response adjustments, and uses of auxiliary data. Non response adjustment alternatives, including weighting cell adjustments, formation of cells using regression trees, and propensity score adjustments. Weighting via post stratification, raking, general regression estimation, and other types of calibration.

Prerequisite: SURV615, SURV616, and SURV625; or permission of instructor.

SURV747 Practical Tools for Sampling and Weighting Part I (2 Credits)

A statistical methods class appropriate for second year Master's students and PhD students. The course will be a combination of hands-on applications and general review of the theory behind different approaches to sampling and weighting. Topics covered include sample size calculations using estimation targets based on relative standard error, margin of error, and power requirements. Use of mathematical programming to determine sample sizes needed to achieve estimation goals for a series of subgroups and analysis variables. Resources for designing area probability samples. Methods of sample allocation for multistage samples. Base weights are discussed in context of the sample designs chosen. Note: Part II of the course will provide a more in-depth discussion on weighting.

Prerequisite: Sampling theory (e.g., SURV440 or equivalent) and Applied sampling (e.g., SURV626 or equivalent).

Recommended: Experience in the use of statistical software package R.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV750 Step by Step Survey Weighting (1 Credit)

Learn to calculate analysis weights for various survey designs in a real-world setting. We will cover topics on calculating base weights for single- and multistage designs, adjusting weights for unknown study eligibility and nonresponse using a few techniques, and aligning survey estimates with known population values through weight calibration. We will use specialized software for the procedures mentioned. This course will emphasize R but some examples in SAS and Stata are also discussed.

Prerequisite: SURV440, or course in sampling theory; and SURV626, or course in applied sampling.

Recommended: Some experience with variance estimation (e.g., SURV742), statistical analysis using survey data, and the R statistical computing software.

SURV751 Introduction to Big Data and Machine Learning (1 Credit)

This is an introduction to the uses and methods of working with Big data. Students explore how Big Data concepts, processes and methods can be used within the context of Survey Research.

Prerequisite: Familiarity with the statistical software R.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

Additional Information: Familiarity with model building and model selection as well as the R program is not required but could also be helpful. Students without prior knowledge in R should plan on using free online resources to make themselves familiar with the basics of this statistical programming language.

SURV752 Introduction to Data Visualization (1 Credit)

Data visualization is one of the most powerful tools to explore, understand and communicate patterns in quantitative information. At the same time, good data visualization is a surprisingly difficult task and demands three quite different skills: substantive knowledge, statistical skill, and artistic sense. The course is intended to introduce participants to a) key principles of analytic design and useful visualization techniques for the exploration and presentation of univariate and multivariate data. This course is highly applied in nature and emphasizes the practical aspects of data visualization in the social sciences. Students will learn how to evaluate data visualizations based on principles of analytic design, how to construct compelling visualizations using the free statistics software R, and how to explore and present their data with visual methods.

Prerequisite: Basic statistics understanding and bivariate linear regression.

Recommended: Experience in the use of statistical software package R.

Restriction: Permission of BSOS-Joint Program in Survey Methodology department.

SURV753 Machine Learning II (2 Credits)

Social scientists and survey researchers are confronted with an increasing number of new data sources such as apps and sensors that often result in (para)data structures that are difficult to handle with traditional modeling methods. At the same time, advances in the field of machine learning (ML) have created an array of flexible methods and tools that can be used to tackle a variety of modeling problems. Against this background, this course discusses advanced ML concepts such as cross validation, class imbalance, Boosting and Stacking as well as key approaches for facilitating model tuning and performing feature selection. In this course we also introduce additional machine learning methods including Support Vector Machines, Extra-Trees and LASSO among others. The course aims to illustrate these concepts, methods and approaches from a social science perspective. Furthermore, the course covers techniques for extracting patterns from unstructured data as well as interpreting and presenting results from machine learning algorithms. Code examples will be provided using the statistical programming language R.

Prerequisite: SURV751; or comparable knowledge or experience.

Recommended: Familiarity with the statistical programming language R.

SURV760 Survey Management (3 Credits)

Modern practices in the administration of large scale surveys. Alternative management structures for large field organizations, supervisory and training regimens, handling of turnover, and multiple surveys with the same staff. Practical issues in budgeting of surveys are reviewed with examples from actual surveys. Scheduling of sequential activities in the design, data collection, and processing of data is described.

SURV772 Survey Design Seminar (3 Credits)

Students present solutions to design issues presented to the seminar. Readings are selected from literatures not treated in other classes and practical consulting problems are addressed.

Credit Only Granted for: (SURV770 and SURV771) or SURV772.

Formerly: SURV770 and SURV771.

SURV798 Advanced Topics in Survey Methodology (3 Credits)

Individual instruction.

Repeatable to: 12 credits if content differs. Cross-listed with STAT798.

Credit Only Granted for: STAT798 or SURV798.

SURV819 Doctoral Research Seminar in Survey Methodology (1-6 Credits)

This is the first, two term seminar introducing the doctoral student to areas of integration of social science and statistical science approaches in the design, collection, and analysis of surveys.

Restriction: Permission of instructor.

SURV829 Doctoral Research Seminar in Survey Methodology (3-6 Credits)

An advanced research seminar for students preparing to do research or take doctoral comprehensive examinations.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

SURV898 Pre-Candidacy Research (1-8 Credits)**SURV899 Doctoral Dissertation Research (1-8 Credits)**

TDPS - Theatre, Dance and Performance Studies

TDPS408 Seminar in Theory and Practice of Critical Difference (3 Credits)

This interdisciplinary seminar examines expressive culture as performed in works of dance, theatre, music, and digital media.

Repeatable to: 6 credits if content differs.

TDPS440 Arts Leadership Seminar (3 Credits)

An advanced seminar in arts leadership exposing students to the foundations of arts leadership in not-for-profit organizations as it intersects with current trends in technology, demographics, government policy, and the economy. In case studies based on examples drawn from local arts organizations, students will learn about audience engagement as well as institutional development terminology and best practices.

Cross-listed with: ARHU440.

Credit Only Granted for: TDPS440 or ARHU440.

TDPS441 Arts Entrepreneurship: Theory and Practice (3 Credits)

Establishes arts entrepreneurship as a unique discipline with the goal of connecting creative initiatives (products, artforms, and programs) to audiences, resources, and communities. Introduces students to the ways in which creative initiatives both create value and offer solutions to social, political, environmental, and cultural issues. Students will develop artist impact statements and identify different contexts and ways to apply their talents and creative initiatives in society.

Prerequisite: ARHU240 or TDPS240; or permission of instructor.

Recommended: ARHU440 or TDPS440.

Cross-listed with: ARHU441.

Jointly offered with: ARHU640, TDPS640.

Restriction: Limited to 4 undergraduate students (2 in ARHU and 2 in TDPS).

Credit Only Granted for: TDPS458E, ARHU441, TDPS441, ARHU640 or TDSP640.

Formerly: TDPS458E.

TDPS458 Special Topics in Advanced Performing Arts (1-3 Credits)

Designed for performing arts students. Offers instruction at an advanced level in various aspects of performance such as Voice for the Performing Arts, Movement for the Performing Arts, Acting for the Performing Arts, Partner Dance and a myriad of specific aspects within these genres.

Prerequisite: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 9 credits if content differs.

TDPS469 Advanced Practicum in Stage Management (1-3 Credits)

A graded course in stage management for theatre and/or dance productions. A hands-on laboratory experience.

Prerequisite: Minimum of 2 credits from TDPS479.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 9 credits.

TDPS470 Production Management (3 Credits)

To familiarize students with techniques and skills required of a Production Manager in a theatrical production. Focus will also be given to the field of event management.

Prerequisite: TDPS201, THET222, THET223, and THET116; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

TDPS479 Production Practicum (1-3 Credits)

A graded course in a specified practical aspect of mounting a theatre or dance production. It is a hands-on, purely laboratory experience.

Prerequisite: TDPS201.

Repeatable to: 10 credits if content differs.

Credit Only Granted for: TDPS479 or THET479.

Formerly: THET479.

TDPS789 Professional Development in Dance and Theatre (1 Credit)

This course will introduce graduate students to the academic job market, competitive fellowships, and ALT-AC (alternative academic) careers. Topics will include the interdisciplinary job market, cover letters, cv's, teaching and research statements, the teaching/artist portfolio, the diversity statement, interfolio, letters of recommendation, writing samples, websites, interviewing, and careers beyond academia.

Cross-listed with: AMST789.

Repeatable to: 4 credits.

Formerly: THET669K, DANC689F.

THET - Theatre

THET408 Seminar: Theory and Performance Studies (3 Credits)

Studies in theatre theory and performance studies from classical antiquity to the present.

Repeatable to: 12 credits if content differs.

THET411 Voice for the Actor II (3 Credits)

Learn the International Phonetic Alphabet (IPA) and apply to exploration of sound and language. Designed to increase voice and speech awareness, and create a base knowledge from which to approach any accent or dialect.

Prerequisite: THET324 or THET325; and must audition; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Restriction: Junior standing or higher.

Credit Only Granted for: THET311, THET411, or THET499L.

Formerly: THET311.

THET420 Language and the Actor (3 Credits)

Explores the actor's relationship to language, particularly heightened poetic language, in order to: develop the ability to embody language and vocally and physically project the images; apply an intellectual understanding of the inherent structural, poetic, and rhetorical techniques of heightened language in combination with action theory; and access the inner states of character while expressing them through text.

Prerequisite: THET325 or THET324; and must audition; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET424 Movement II: Advanced Studies in Movement and Mask Theatre (3 Credits)

A deeper exploration of how to use the actor's instrument for dramatic expression. Continuing work in the F.M. Alexander Technique and foundational exercise to help actors learn what they need to prepare for rehearsal and performance. Other techniques may include theatrical styles, physical character, dramatic use and play with space and rhythm and masks.

Prerequisite: THET325 or THET324; and must audition; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Restriction: Junior standing or higher.

THET425 Actor's Process II (3 Credits)

A deeper exploration of the work begun in THET325. A continuation of creating a personal process through which the actor can confidently approach any genre of play. Special focus on status and subtext and the world of the playwright.

Prerequisite: THET325; and must audition; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET426 Theatrical Clown (3 Credits)

Progression of developing individual clown characters through methods based on European pedagogy which emphasizes a physical and technical approach to actor training.

Prerequisite: THET324 or THET325; and must Audition.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Credit Only Granted for: THET426, THET499C or THET 499O.

Formerly: THET499C, THET499O or THET426.

THET428 Special Topics in Advanced Theatre and Performance (1-3 Credits)

This course is offered as part of the School of Theatre, Dance, and Performance Studies' Artist in Residence program. Topics covered may include: Intercultural Theatre; Performance Art; Puppetry; Solo Performance; or Theatrical Design.

Prerequisite: THET114 or TDPS201; and (THET116, THET222, and THET223); and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Restriction: Junior standing or higher.

Repeatable to: 3 credits if content differs.

Additional Information: Incorporate the change from THET 114 to TDPS 201, listing both numbers, as students will take the prerequisite under either number. To change the catalog description to reflect the proper unit name as the School of Theatre, Dance, and Performance Studies.

THET429 Actor's Studio (1-3 Credits)

Participation in dramatic roles executed under faculty supervision in the department's productions. Eligible students must make commitments and plan performances with course instructor during pre-registration.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 10 credits.

THET435 Advanced Costume Construction (3 Credits)

The course is taught in a presentation/practical application format. Students will learn advanced techniques in draping and pattern development and develop proficiency in communication of design and construction choices.

Prerequisite: THET284 and THET384; and portfolio review; and permission of ARHU-School of Theatre, Dance & Performance Studies department. Jointly offered with THET635.

Credit Only Granted for: THET435, THET499 K, THET635, or THET669K.

Formerly: THET499K and THET669K.

THET440 Advanced Playwriting (3 Credits)

Ensemble-based writer's workshop. It is the second part of a two-course sequence and is designed for students who already have a foundation in the basics of playwriting or who are otherwise well-versed in the art of theatre and dramatic structure. Through exploratory writing sequences, the reading of full-length plays, and in-class readings of work-in-progress, students will continue to deepen their craft and develop the script for a new full-length play.

Prerequisite: THET340; or permission of instructor. And permission of ARHU-School of Theatre, Dance & Performance Studies department.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Credit Only Granted for: THET440 or THET499P.

Formerly: THET499P.

THET451 Musical Theatre Workshop I (3 Credits)

Development of the ability to move, act and express through the media of lyric and music.

Prerequisite: Must audition.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET452 Musical Theatre Workshop II (3 Credits)

Development of the ability to move, act and express through the media of lyric and music from the integrated musicals of the 1960s through the development of concert and rock/pop musicals.

Prerequisite: Must audition.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET465 History of Fashion for the Theatre (3 Credits)

A survey of Western clothing from the Ancient Worlds through 20th Century. A discussion of the cultural contexts of various trends in fashion through an examination of art, industry and textiles.

Prerequisite: THET116; or permission of instructor.

Restriction: Sophomore standing or higher.

THET469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

THET471 Design Studio in Scenery (3 Credits)

Advanced study of scenic design for the theatre. Particular design projects will vary.

Prerequisite: THET371; and permission of ARHU-School of Theatre, Dance & Performance Studies department. Jointly offered with THET639.

Credit Only Granted for: THET471 or THET639.

THET472 Scene Painting (3 Credits)

Scene painting techniques and materials. Three-dimensional realistic scenery and non-realistic two-dimensional projects.

Prerequisite: THET114 or TDPS201; or permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET473 Rendering for the Theatre II (3 Credits)

Continued study in rendering techniques and graphic skills for theatrical design presentation. Emphasis on style, technique and use of different artistic media.

Prerequisite: THET373; or permission of instructor.

THET474 Advanced Stage Management (3 Credits)

Intensive practical study of the techniques and procedures for stage management.

Prerequisite: THET114 or TDPS201; and (THET116, THET222, THET223, and THET274); and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department; and sophomore standing or higher.

THET475 History of Art, Architecture, and Decor for the Theatre (3 Credits)

Study of Western art, architecture, and decor and their practical application to theatrical production.

Prerequisite: THET114 or TDPS201; and (THET116, THET222, and THET223); and permission of ARHU-School of Theatre, Dance & Performance Studies department. Jointly offered with THET670.

Credit Only Granted for: THET475 or THET670.

THET477 Design Studio in Lighting (3 Credits)

Designed for students who have successfully completed THET377 and wish to further develop their lighting design skills. Emphasis is on theoretical design of productions and realized light lab projects. Particular design projects will vary.

Prerequisite: THET377; and permission of ARHU-School of Theatre, Dance & Performance Studies department. Jointly offered with THET659.

Credit Only Granted for: THET477 or THET659.

THET479 Production Practicum (1-3 Credits)

Designed to expand students' practical knowledge and skills through working on Department of Theatre productions.

Prerequisite: THET116 and THET114; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 6 credits if content differs.

THET480 Advanced Sound Design (3 Credits)

Students will dive deeper into the technical elements of sound design, developing a working understanding of both software editing tools as well as the primary components of a live sound system.

Prerequisite: THET380 and permission of the School of Theatre, Dance, and Performance Studies.

THET481 Theatre Graphics II: Computer Assisted Design (3 Credits)

Study and practical application of computer generated graphical design for use in theatrical production.

Prerequisite: THET114 or TDPS201; and THET116; and permission of ARHU-Theatre department.

Restriction: Sophomore standing or higher.

THET482 Scene Painting II (3 Credits)

Advanced study of theatrical scenic painting.

Prerequisite: THET472; or permission of instructor.

Restriction: Sophomore standing or higher.

THET488 Special Topics in Theatre History Before 1800 (3 Credits)

Topics in the history of world theatre and performance from the Greeks through 1800.

Repeatable to: 12 credits if content differs.

THET489 Special Topics in Theatre History from 1800 to Present (3 Credits)

Topics in the history of world theatre and performance from 1800 to present.

Repeatable to: 12 credits if content differs.

THET491 Theatrical Rendering Using Photoshop (3 Credits)

A studio course in rendering for the theatre. The course focuses primarily on traditional approaches to perspective drawing, space, texture, color and lighting rendering using Photoshop. Photoshop tools and techniques; preparing three-dimensional objects for accurate rendering; and techniques for Photoshop rendering and lighting of three-dimensional objects and architectural forms. This class primarily has an emphasis on rendering/uses for scenic design.

Prerequisite: THET471.

Credit Only Granted for: THET491 or THET4280.

Formerly: THET4280.

THET497 Non-Traditional Theatre (3 Credits)

Seminar exploring American and European experimental performance since 1960. Topics include experimental theatre, performance art, pornography and performance, gender and performance, and popular culture and performance. Topics are treated historically and theoretically. Student-produced performance projects are an important component of the seminar.

THET498 Seminar: Theatre History (3 Credits)

Studies in theatre history from classical antiquity to the present.

Prerequisite: THET488 or THET489.

Restriction: Senior standing; and permission of instructor.

Repeatable to: 6 credits if content differs. Jointly offered with THET698.

Credit Only Granted for: THET498 or THET698.

THET499 Independent Study (1-3 Credits)

An independent study course in which each student completes an assigned major theatre project under close faculty supervision. Projects may culminate with term papers, scenic or costume designs, or a stage production.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 6 credits.

THET600 Introduction to Graduate Research Methods (3 Credits)

Basic skills in theatre research.

Restriction: Must be a graduate student in a Theatre program. Also offered as: THET700.

Credit Only Granted for: THET600 or THET700.

Additional Information: Only students in the doctoral program may register for THET700.

THET606 Teaching Theatre (1 Credit)

Strategies and materials for teaching a typical introductory course in theatre, with emphasis on specific problems of classroom instruction (e.g., creating a supportive climate, promoting active learning by students, constructing appropriate tests, adapting methods to content, and resolving discipline problems).

THET608 Seminar: Theory and Performance Studies (3 Credits)

A repeatable seminar on special topics in theory of the Theatre and Performance Studies.

Recommended: THET700 and THET600.

Repeatable to: 9 credits if content differs. Jointly offered with THET408.

Credit Only Granted for: THET408 or THET608.

THET614 Ethnography and Performance (3 Credits)

Different types of cultural and artistic performance around the world (theatre, music, dance, sport, festival) are examined. Students learn 1) how various types of live performance are studied ethnographically; 2) what thick description reveals and how it adds to the analysis of performance; and 3) methods for conducting an ethnographic study of performance.

Credit Only Granted for: ANTH6880, THET608E, or THET614.

Formerly: THET608E.

THET616 Character Development (2-3 Credits)

European-based pedagogy which emphasizes a physical and technical approach to actor training. Includes technique training in physical theatre and movement, voice, monologue writing, site-specific performance, and street theatre.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET619 Special Topics in Performance Studio (2-6 Credits)

This is a rotating "special topics" course that will address the history and theory of performance in areas including: political performance, experimental theatre, and contemporary theatre. The course will be offered by guest artists/instructors who are part of the Theatre Department's professional network of scholars and artists.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET627 Verse Analysis (2 Credits)

Exploration of how verse works. Looking at objective issues of verse speaking iambic pentameter and its variations, heightened versus naturalistic speech, antithesis, onomatopoeia, assonance, alliteration, and the difference between verse and prose as well as irony, ambiguity, passion, coolness, exploring character, poetry and hidden poetry.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET629 Performance Lab (1 Credit)

Students will develop a performance project based on the training that they have received in their current semester's study. This course offers students the opportunity to expand and develop their practice.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET630 Voice I (2 Credits)

Students will learn the Linklater progression of voice exercises. Work will include the discovery of sound in the body, awareness and opening of the channel, exploration of resonance, vocal freedom and range, isolating and strengthening resonating chambers and articulation exercises.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET632 Playwriting (3 Credits)

Lessons in playwriting, including character, plot, dramatic structure, dialogue, exposition, setting, and creating theatrical images.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET633 Figure Drawing for Theatre Design (3 Credits)

Figure Drawing is designed to give students the necessary drawing skills that are required when drawing and painting for the theatre. We will study anatomy, figure/ground relationships, composition plotting and layout, planar value, light and shadow analysis, color theory and the fundamentals of perspective and how this applies to theatre design.

Credit Only Granted for: THET633 or THET669F.

Formerly: THET669F.

THET635 Graduate Costume Construction (3 Credits)

The course is taught in a presentation/practical application format. Students will learn advanced techniques in draping and pattern development and develop proficiency in communication of design and construction choices.

Prerequisite: THET284 and THET384; and portfolio review; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Jointly offered with: THET435.

Credit Only Granted for: THET435 or THET635 .

THET636 Photoshop for Theatrical Rendering (3 Credits)

Photoshop tools and techniques; preparing three-dimensional objects for accurate rendering; and techniques for Photoshop rendering and lighting of three-dimensional objects and architectural forms.

Credit Only Granted for: THET636 or THET669P.

Formerly: THET669P.

THET637 Movement Awareness (2 Credits)

Based on the F.M. Alexander Technique, students will learn to recognize habit patterns that interfere with movement, breath, voice, and expression.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET639 Graduate Design Studio - Scenery (3 Credits)

A repeatable course that allows students to progress in their design training through a series of carefully and individually structured assignments and projects.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 12 credits if content differs.

Credit Only Granted for: THET471 or THET639.

THET640 Voice II (2 Credits)

Build on an understanding of vocal anatomy and knowledge of habitual vocal usage, this course will challenge students to work beyond their habitual voice patterns. Emphasis will be placed on range, resonance, and vocal improvisation.

Prerequisite: THET630.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET642 Thesis Development (2 Credits)

Focus on writing the scripts for the thesis projects that will be performed in year three in the Festival of New Works. The course is designed to compose and finish a story in the form of a play or devised script during the course of the semester. Students will hone skills of listening and critique, and to provide a forum in which you can share and garner feedback on your work.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET643 Puppetry and Performance (3 Credits)

Students will learn the history and techniques of puppetry (Western and Non-Western).

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET645 Graduate Rendering for Costume Design (3 Credits)

Advance study in rendering techniques for theatrical design presentation.

Credit Only Granted for: THET669R or THET645.

Formerly: THET669R.

THET647 Movement Fundamentals (2 Credits)

Based on Jacques Lecoq's technique of neutral mask and character mask.

Prerequisite: THET637.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET648 Performance Practicum (3 Credits)

A "hands-on" course providing students with opportunities to apply techniques, concepts, and principles learned in class to practical production projects in real time situations. Generally, practicum students will participate in a Main-stage production.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 6 credits.

THET649 Graduate Design Studio - Costume (3 Credits)

A series of carefully and individually structured assignments and projects that allows students to progress in their design training.

Repeatable to: 12 credits if content differs.

Credit Only Granted for: THET483 or THET649.

THET650 Voice III (2 Credits)

Deepening understanding and experience of the unique voice. Work will focus on identifying vocal habits, and then learning new tools such as the International Phonetic Alphabet, phrasing distinctions, and Roy Hart vocal techniques.

Prerequisite: THET640.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET652 Ensemble Devised Performance (3 Credits)

Process of developing an ensemble, and as an ensemble researching, developing and performing a devised performance. The techniques involve teaching how each solo voice must be developed in order for the ensemble voice to function efficiently.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET657 Movement Styles (2 Credits)

Based on the techniques of theatrical clown originally developed by Jacques Lecoq and further developed by Serge Martin, Phillippe Gaulier and Pierre Byland. Builds from the techniques learned with neutral and character mask work. Theatrical clown work increases a performer's flexibility, ability to pick up cues, enhances stage presence, and teaches the performer to work beyond the fourth wall.

Prerequisite: THET637.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET659 Graduate Design Studio - Lighting (3 Credits)

We will focus on connecting subject matter to light. Questions of meaning, structure, process, and intent will be investigated. The class will also explore the qualities and functions of light, what light can and cannot communicate. Students will develop a visual and conceptual vocabulary. Emphasis will be placed on process, both intellectual and practical.

Jointly offered with: THET477.

Restriction: Must not have completed THET477; and permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 12 credits if content differs.

Credit Only Granted for: THET477 or THET659.

THET669 Independent Study (1-3 Credits)**THET670 Period Style for the Theatre: Fashion and Decor (3 Credits)**

A study of environmental decor, theatrical architecture, historic ornament and fashion through the ages and their practical application for theatrical production.

Recommended: THET600.

Jointly offered with: THET475.

Credit Only Granted for: THET475 or THET670.

THET672 Scenography (3 Credits)

An advanced design studio which takes a comprehensive approach to design spanning across lines between specific disciplines and explores Scenography as an art form. Students are expected to concentrate in their primary design area while simultaneously conceiving, coordinating and developing other scenographic elements.

THET677 Production Practices (2 Credits)

Explores business practices in the field of professional theatre, including arts management, development, and marketing.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET678 Collaborative Design & Production for Performance (3 Credits)

A 3rd year capstone course co-taught by design faculty and invited professional artists and designers. 2nd year students can take the class by special permission. This is an advanced studio class in design collaboration. Students will design two theoretical projects under the supervision of two design faculty members and guest directors.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 9 credits.

THET679 Graduate Design Studio - Multimedia Design (3 Credits)

A repeatable course that allows students to progress in their design training through a series of carefully and individually structured assignments and projects.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

Repeatable to: 12 credits if content differs.

THET680 History of Fashion for Theatre (3 Credits)

Evolution of clothing styles and materials through history, from early Mid-Eastern civilizations to the present day.

Credit Only Granted for: THET680 or THET669A.

Formerly: THET669A.

THET685 History of Theatrical Theory Before Modernism (3 Credits)

Theories of drama (written script) and theatre (performance) from fifth-century B.C. Greece through nineteenth-century romanticism.

Recommended: THET600.

THET686 History of Modern Theory (3 Credits)

Modern dramatic and performance theory from realism through postmodernism with special emphasis on the European and American avant-garde.

Recommended: THET600. Jointly offered with THET486.

Formerly: THET689.

THET688 Special Problems in Drama (3 Credits)

The preparation of adaptations and other projects in dramaturgy.

THET697 Performance Thesis Project (3 Credits)

The thesis project incorporates both a performance and an oral examination that assesses the student's ability to apply techniques and methods learned throughout his/her course of study. Students will select a performance project based on their areas of expertise or interest. Performances will be videotaped and reviewed by the student's thesis committee.

Restriction: Permission of ARHU-School of Theatre, Dance & Performance Studies department.

THET698 Seminar: Theatre History (3 Credits)

Studies in theatre history from classical antiquity to the present.

Prerequisite: THET391 and THET390; or students who have taken courses with comparable content may contact the department.

Recommended: THET600.

Repeatable to: 9 credits if content differs. Jointly offered with THET498.

THET700 Introduction to Graduate Research Methods (3 Credits)

Basic skills in theatre research.

Restriction: Must be a graduate student in a Theatre program. Also offered as: THET600.

Credit Only Granted for: THET600 or THET700.

Additional Information: Only students in the doctoral program may register for THET700.

THET711 Critical Theory (3 Credits)

A doctoral methods course. Major developments in modern and postmodern critical theory with particular emphasis on application to the fields of Theatre and Performance Studies.

Prerequisite: THET700.

Recommended: THET712.

THET712 Historical Research Methods and Historiography in Theatre (3 Credits)

A survey of methods commonly used in writing theatre history and their application to a suitable problem. Formulation of significant research questions, systematic collection of bibliographic and phenomenal information, formulating substantial claims, organizing and writing research for disciplinary outlets.

Prerequisite: THET700.

Formerly: PCOM712.

THET713 Performance Studies (3 Credits)

Introduces doctoral students to theoretical and methodological issues in performance studies. We will focus on 3 primary areas of research, analyzing representational strategies of adaptations, ethnography, and cultural analysis of theatrical performance.

Prerequisite: THET700.

THET788 Design for Live Performance Tutorial (1-6 Credits)

Collaboration with a faculty member on joint creative and artistic projects. A tutorial that assists students in developing a professional design portfolio, monitors practical production efforts and addresses practical production skills that may not be offered in traditional design studios.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

THET789 Theatre Design Process and Production (1-6 Credits)

The class encompasses various areas of pedagogical interactions between MFAD students and their mentors which include, but are not limited to: design advising and supervision for mainstage design assignments and professional projects outside the School, production process supervision (shop walkthroughs, fittings, technical rehearsals, note sessions), mandatory design critiques, assisting faculty members on outside professional projects etc.

Restriction: Permission of instructor.

Repeatable to: 6 credits.

THET799 Master's Thesis Research and Preparation (1-6 Credits)

Research and preparation of the MA or MFA thesis. MA/MFA students must be registered for this class during the semester in which they defend their thesis.

Repeatable to: 6 credits.

THET888 Doctoral Practicum in Theatre (1-6 Credits)

Critical analysis of a phase of a professional field of theatre. Analysis of professional activity through personal observation. Evaluation of the purpose, process, effectiveness, and efficiency of professional activity. Recommendations for training and further research.

Repeatable to: 6 credits.

THET889 Doctoral Tutorial in Theatre (1-6 Credits)

Individual research in theatre.

Repeatable to: 6 credits.

THET898 Pre-Candidacy Research (3-6 Credits)

Research and preparation for the Comprehensive Examinations and for the Qualifying Examinations. Students must register for at least one of these classes in each of the semesters in which these exams are taken and may register for two THET 898 courses in a semester if they are taught by different instructors. (Total credits per semester for all courses must not exceed 10 credits, 6 credits during the winter term.)

Repeatable to: 12 credits.

THET899 Doctoral Dissertation Research (1-10 Credits)

Formerly: PCOM899.

TLPL - Teaching and Learning, Policy and Leadership

TLPL401 Student-Centered Curriculum and Instruction (3 Credits)

A focus on using student-centered teaching and learning approaches in high school STEM classrooms. Students will develop and implement a multi-day series of lessons, building upon the foundations of inquiry-based practices developed in prior courses. Students will also consider the implications of cultural awareness on teaching practices broadly, as well as in the specific contexts of their fieldwork.

Prerequisite: Permission of instructor; and TLPL102; and must have completed or be concurrently enrolled in TLPL414.

Credit Only Granted for: TLPL488P or TLPL401.

Formerly: TLPL488P.

Additional Information: Field experience for this course will require students to be available for a 2-4 hour block of time at various points throughout the semester to complete observations and teach lessons between 8:00 a.m. and 3:30 p.m. A background check is required and will be facilitated through the Terrapin Teacher program coordinator.

TLPL403 Teaching and Learning High School Mathematics (3 Credits)

Methods of teaching and assessing the high school mathematics curriculum; aligning tasks and activities to curriculum standards; lesson planning; and selection and use of technology. The course also focuses on managing large group dynamics in the high school mathematics classroom.

Prerequisite: Must have 2 semesters of calculus; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Corequisite: EDCI355.

Restriction: Must be in Secondary Educ: Mathematics program; and minimum cumulative GPA of 2.75; Or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI455 or TLPL403.

Formerly: EDCI455.

TLPL406 Teaching and Learning Mathematics in the Elementary School, Part 1 (3 Credits)

Focuses on teaching and learning whole numbers. Special emphasis will be placed on developing equitable teaching practices that enable culturally and linguistically diverse students to develop knowledge and skills that promote mathematical proficiency. Mathematical concepts: Content knowledge: some aspects of early numeracy, whole numbers and the four arithmetic operations, some aspects of algebraic thinking.

Jointly offered with: TLPL607.

Credit Only Granted for: TLPL607 or TLPL406.

TLPL407 Teaching and Learning Mathematics in the Elementary School, Part 2 (3 Credits)

Focuses on teaching and learning rational numbers (fractions and decimals) and developing algebraic thinking. Special emphasis will be placed on developing equitable teaching practices that enable culturally and linguistically diverse students to develop knowledge and skills that promote mathematical proficiency. Mathematical concepts: Content knowledge: rational numbers (fractions and decimals) and the four arithmetic operations, algebraic thinking, some aspects of geometry and measurement.

Credit Only Granted for: TLPL488G or TLPL407.

TLPL413 Teaching and Learning Middle School Mathematics (3 Credits)

Methods of teaching and assessing the middle school mathematics curriculum. Understanding the conceptual difficulties students have in moving from whole numbers to rational numbers, additive thinking to multiplicative thinking, and arithmetic to algebra. Lesson planning and selection of technology and other materials are applied in the context of supervised tutoring of students having difficulty in middle school mathematics. Lab and field experience required. Supervised tutoring takes place on site at a local middle school therefore TLPL413 students will be expected to travel to a local middle school for 8-10 of the class meetings.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI457 or TLPL413.

Formerly: EDCI457.

TLPL414 Knowing and Learning in Mathematics and Science (3 Credits)

Special and intensive treatment of current topics and issues in mathematics and science teaching and learning, policy and leadership. The overall goal of the course is to orient future teachers to the discourses and theories that shape what we know about how students learn math and science.

Prerequisite: Must have completed or be concurrently enrolled in TLPL102.

Credit Only Granted for: TLPL488M or TLPL414.

Formerly: TLPL488M.

TLPL415 Perspectives in Science (3 Credits)

Overview of the history of science and philosophical perspectives on science, particularly as they apply to science teaching.

Prerequisite: Permission of instructor.

Credit Only Granted for: TLPL488W or TLPL415.

Formerly: TLPL488W.

TLPL418 Teaching Residency (3-9 Credits)

An extended teaching internship in an Elementary Professional Development School. School placements to be arranged.

Prerequisite: Must have completed or be concurrently enrolled in TLPL352, TLPL363, TLPL372, TLPL415.

Restriction: Restricted to Elementary Education majors with permission of the Department; 2.75 GPA required.

Repeatable to: 12 credits.

Credit Only Granted for: TLPL418 or EDCI481.

TLPL420 Knowledge, Reasoning, and Learning in Science (3 Credits)

For prospective science teachers. Investigations of the nature of knowledge, reasoning, and learning in middle and secondary science. Readings from cognitive science and science education research; studies of student thinking in interview and classroom observations; analyses of curricula. Includes laboratory and field experiences.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: TLPL420 or EDCI411.

Formerly: EDCI411.

TLPL421 Practices in Secondary School Science Teaching (2 Credits)

Analyses of student thinking, instructional interpretations, strategies, and techniques in the teaching internship.

Prerequisite: TLPL425.

Corequisite: EDCI471 and EDCI474.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department; and must be in Secondary Educ: Science program. Or minimum cumulative GPA of 2.75.

Credit Only Granted for: TLPL421 or EDCI480.

Formerly: EDCI480.

TLPL423 Interdisciplinary Teaching in the Middle Grades I (2 Credits)

For prospective middle school teachers. Studying and planning interdisciplinary instructional practices in middle school. Utilizes context and experiences from students' field placements. Use of technology and incorporation of technology into instruction.

Prerequisite: TLPL413 and TLPL420; or permission of instructor.

Corequisite: EDCI360 and TLPL475.

Restriction: Minimum cumulative GPA of 2.75; and must be in the Middle School Teacher Education Program, major code 0804P.

Credit Only Granted for: EDCI413 or TLPL423.

Formerly: EDCI413.

TLPL424 Interdisciplinary Teaching in the Middle Grades II (2 Credits)

For prospective middle school teachers. Planning and implementing interdisciplinary instructional practices in middle school. Draws on the context of and experiences in the student teaching placement. Use of technology and incorporation of technology into instruction.

Prerequisite: EDCI360 and TLPL423.

Corequisite: TLPL476 and EDCI460.

Restriction: Minimum cumulative GPA of 2.5; and must be in the Middle School Teacher Education Program.

Credit Only Granted for: EDCI414 or TLPL424.

Formerly: EDCI414.

TLPL425 Learning and Teaching in Science (3 Credits)

Studies of student learning and instructional practices in science teaching.

Prerequisite: TLPL420; or permission of instructor.

Restriction: Must be in Secondary Educ: Science program.

Credit Only Granted for: EDCI470 or TLPL425.

Formerly: EDCI470.

TLPL433 Foundations of Art Education (3 Credits)

Introduction to the field of Art Education and the role of the visual arts in grades PreK-12 for today's diverse school populations. The fundamental, historical and philosophic components of art education with an emphasis on arts disciplines and curriculum. Includes a school-based practicum. For those considering art education as a major.

Restriction: Minimum cumulative GPA of 2.75.

Credit Only Granted for: EDCI403 or TLPL433.

Formerly: EDCI403.

TLPL435 Art Education Methods I (3 Credits)

Methods I provides future art teachers with a knowledge base of the theories and best practices of effective pedagogy for: teaching methods and strategies, diversity, motivational techniques, classroom management, assessment and evaluation methods, and accommodating all students including those with special needs.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department. And must be in Secondary Educ: Art program; or must be in Secondary Educ: Art pre-major program.

Credit Only Granted for: EDCI405 or TLPL435.

Formerly: EDCI405.

TLPL436 Studio Processes and Materials: 2D (3 Credits)

A discussion/studio format used to develop skills, materials, resources and education strategies for using technology and two-dimensional art in K-12 programs.

Prerequisite: ARTT210.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department; and junior standing or higher; and must not be in any of the following programs (Early Childhood Education; Elementary Education; Secondary Educ: Science; Secondary Educ: English Language Arts; Secondary Educ: Mathematics; Secondary Educ: Foreign Languages; Secondary Educ: Social Studies; Physical Education; Music Education; Special Education).

Credit Only Granted for: EDCI406 or TLPL436.

Formerly: EDCI406.

TLPL437 Studio Processes and Materials: 3D (3 Credits)

A lecture-studio course to develop skills, material resources, and educational strategies for three-dimensional projects in school settings.

Restriction: Must be in Secondary Educ: Art program; or must be a Pre-Art Education Major.

Credit Only Granted for: EDCI407 or EDCI437.

Formerly: EDCI407.

TLPL440 Foundations of Educating Multilingual Learners (3 Credits)

Investigates historical, theoretical, and public policy issues and current practice in the field of education as it relates to multilingual learners (also known as English Language Learners, English Learners) in K-12 and other settings.

Credit Only Granted for: EDCI432 or TLPL440.

Formerly: EDCI432.

TLPL441 Methods for Teaching Multilingual Learners (3 Credits)

Draws on current research to present methods of teaching English to speakers of other languages and challenges participants to analyze and apply successful classroom practices that address the needs of culturally and linguistically diverse learners (also known as English Language Learners, English Learners).

Credit Only Granted for: EDCI434 or TLPL441.

Formerly: EDCI434.

TLPL442 Foundations of Literacy and Biliteracy Development (3 Credits)

An overview of the research on literacy and biliteracy development for English learners. Specifically, the course explores the theoretical models and processes of teaching reading and writing, current literacy/biliteracy issues, assessment, and strategies for developing literacy and biliteracy skills for English learners.

Credit Only Granted for: EDCI435 or TLPL442.

Formerly: EDCI435.

TLPL443 Cross-Cultural Communication and Multilingual Learners (3 Credits)

Participants will research and critically reflect upon aspects of culture as a basis to understand students and to develop principles to guide culturally inclusive teaching decisions. Participants will better understand the role of culture and language in schooling in order to create classrooms where culturally and linguistically diverse students (also known as English Language Learners, English Learners) can succeed.

Credit Only Granted for: EDCI436 or TLPL443.

Formerly: EDCI436.

TLPL444 Teaching and Understanding English Grammar with Multilingual Learners (3 Credits)

Students will analyze the major grammatical structures of American English and the role of teaching grammar and developing effective classroom methods and techniques for multilingual learners. To do so, students will be exposed to diverse theories, approaches, methods, and practical techniques of grammar instruction in order to assist multilingual learners (also known as English Language Learners, English Learners) K-12 classrooms.

Credit Only Granted for: EDCI437 or TLPL444.

Formerly: EDCI437.

TLPL445 Methods I: World Language Methods and Technology (3 Credits)

Explores Dual Language/World Language Methods and Second Language/Bilingual development. Implications for teaching and initial lesson design are explored through on-campus seminars as well as guided field experiences. Students should reserve a regular half-day per week for the field experience in local schools.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: TLPL445 or TLPL695.

TLPL446 Language Variation and Multilingualism in Elementary Classrooms (3 Credits)

Issues in language variation and multilingualism in elementary classrooms, schools and communities with a focus on classroom practice, assessment, and policy.

Restriction: Must be in Elementary Education program; and minimum cumulative GPA of 2.75. Or permission of EDUC-Teaching and Learning, Policy and Leadership department.

TLPL447 Art Education Methods II (3 Credits)

Methods II builds upon the pedagogical foundation of Methods I and provides future art teachers with the means for developing pre K-12 art lessons and unit plans for a balanced qualitative art program for today's diverse and inclusive schools and classrooms.

Prerequisite: TLPL435; or students who have taken courses with comparable content may contact the department.

Restriction: Minimum cumulative GPA of 2.75; and must be in Secondary Educ: Art program.

Credit Only Granted for: EDCI423, EDCI603, TLPL447 or TLPL633.

Formerly: EDCI423.

TLPL450 Advanced World Language Methods and Technology (3 Credits)

Teaches advanced best practices for effective world language instruction. Topics include: using authentic assessment and materials, applying national standards, teaching writing and culture, motivating students, providing strategy instruction, infusing technology, preparing for PreK-12 employment, and creating a professional portfolio.

Prerequisite: TLPL445.

Corequisite: EDCI438.

Restriction: Must be in Secondary Educ: Foreign Languages program; and minimum cumulative GPA of 2.75. Or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI433, EDCI688A, TLPL450 or TLPL696.

Formerly: EDCI433.

TLPL451 Teaching and Learning in Secondary Education: English (3 Credits)

An introduction for prospective middle and secondary English teachers into the basic issues, concepts, orientations, and processes that shape the teaching of English for diverse students in schools. Candidates explore their own perspectives in relation to local and national trends and develop basic teaching understanding and skills through on-campus seminars, teaching laboratory experiences, and guided field experiences. Students should reserve one full day or two half days per week for field experience.

Credit Only Granted for: EDCI416 or TLPL451.

Formerly: EDCI416.

TLPL452 Bases for English Language Instruction (3 Credits)

Examines current theory, research, best practice, curricula and materials focused on the teaching of English language to native and non-native English learners. Topics include morphology, syntax, semantics, vocabulary, pragmatics, argument, discourse structure, dialects, edited academic English, English language proficiency (listening, speaking, reading, writing) assessment, and instructional planning. English Language Learner (TESOL and SIOP) and special needs (inclusion) pupil issues considered.

Restriction: Must be in Secondary Educ: English Language Arts program; and minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI417 or TLPL452.

Formerly: EDCI417.

TLPL453 Life in Two Languages: Understanding Bilingual Communities and Individuals (3 Credits)

Overview of society and individual multilingualism. Topics include diglossia, language shift, codeswitching, bilingual first language acquisition, language attrition, dual language education policy and practice.

TLPL456 Teaching Writing (3 Credits)

Examines current theory, research, best practice, curricula and materials for teaching written communication in grades K-12. Focuses on analytical, argumentative, informative/explanatory, literary analysis, narrative, descriptive, and research writing. Emphasizes instructional planning, assessment, writer problem-solving strategies, information search, development, organization and style appropriate to task, purpose and audience for both non-digital and digital text. English Language Learner and special needs pupil issues considered.

Corequisite: EDCI447.

Restriction: Must be in Secondary Educ: English Language Arts program; and minimum cumulative GPA of 2.75. Or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI467 or TLPL456.

Formerly: EDCI467.

TLPL457 Literature for Adolescents (3 Credits)

Reading and analysis of fiction and nonfiction; methods for critically assessing quality and appeal; current theory and methods of instruction; research on response to literature; curriculum design and selection of books.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI466 or TLPL457.

Formerly: EDCI466.

TLPL460 Materials and Instruction for Creating Skilled and Motivated Readers, Part I (3 Credits)

Explains the educational research that addresses the acquisition of reading and its underlying processes, including research-based reading instruction and materials. Learn how to create a literacy learning environment that helps diverse learners become skilled and motivated readers through phonemic awareness, phonics, fluency, comprehension, vocabulary, and whole and small-group instructional approaches.

Restriction: Must be in Elementary Education program; and junior standing or higher. Or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI461 or TLPL460.

Formerly: EDCI461.

TLPL461 Materials and Instruction for Creating Skilled and Motivated Readers, Part II (3 Credits)

Selecting, evaluating, and using a variety of materials to create skilled and motivated readers in the elementary grades, particularly in diverse classroom settings; Topics include word analysis, spelling, writing, reading comprehension strategies, directed reading lessons, and explicit instruction.

Prerequisite: TLPL361 and TLPL460.

Corequisite: TLPL312, EDCI342, TLPL321, and TLPL362.

Restriction: Minimum cumulative GPA of 2.75; and permission of EDUC-Teaching and Learning, Policy and Leadership department; and must be in Elementary Education program.

Credit Only Granted for: EDCI462 or TLPL461.

Formerly: EDCI462.

TLPL462 Reading in the Secondary School (3 Credits)

Provides secondary school teachers with understanding the need for and approaches to teaching students to read and learn from content area texts.

Restriction: Minimum cumulative GPA of 2.75; and must be in one of the following programs (Middle School Education; Secondary Educ: Science; Secondary Educ: English Language Arts; Secondary Educ: Mathematics; Secondary Educ: Foreign Languages; Secondary Educ: Social Studies; Secondary Educ: Art); and permission of department required for post-baccalaureate students.

Credit Only Granted for: EDCI463 or TLPL462.

Formerly: EDCI463.

TLPL470 Knowledge, Reasoning, and Learning in Secondary Social Studies (3 Credits)

An exploration of the nature of knowledge and reasoning in social studies disciplines as well as how students learn social studies. Assessment and investigation of students' conceptions and misconceptions as well as their disciplinary thinking. Implications for teaching and initial lesson design are explored through on-campus seminars as well as guided field experiences. Students should reserve a regular half-day per week for the field experience in local schools. This course is required for admission to the secondary social studies double major.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department; and minimum cumulative GPA of 2.75.

Credit Only Granted for: EDCI426 or TLPL470.

Formerly: EDCI426.

TLPL471 Curriculum, Teaching, and Assessment in Secondary Social Studies (3 Credits)

An exploration of curriculum development, teaching, and assessment in secondary history/social studies. Focus on identifying students' conceptions of social studies topics and designing lessons that advance students' disciplinary thinking and understanding.

Prerequisite: TLPL470.

Corequisite: EDCI428.

Restriction: Must be in Secondary Educ: Social Studies program; and minimum cumulative GPA of 2.75. Or permission of EDUC-Center for Learning & Educational Technology.

Credit Only Granted for: EDCI427 or TLPL471.

Formerly: EDCI427.

TLPL475 Equitable Classrooms (2 Credits)

An exploration and application of major theoretical frameworks surrounding equity and critical pedagogy. Creating habits of mind that help teachers see all students as capable of achieving at high levels. Draws on the concurrent field experience.

Prerequisite: TLPL252, TLPL413, and TLPL420.

Corequisite: EDCI360 and TLPL423.

Restriction: Minimum cumulative GPA of 2.75; and must be in Middle School Education program.

Credit Only Granted for: EDCI424 or TLPL475.

Formerly: EDCI424.

TLPL476 Equity and Pedagogy (2 Credits)

An exploration and application of major theoretical frameworks surrounding equity and critical pedagogy. Pedagogical decision making that leads to greater equity and improved student learning for all students. Draws on the concurrent student teaching experience.

Prerequisite: TLPL475.

Corequisite: TLPL424 and EDCI460.

Restriction: Minimum cumulative GPA of 2.75; and must be in one of the following programs (Middle School Education; Early Childhood Education; Elementary Education; Secondary Educ: Science; Secondary Educ: English Language Arts; Secondary Educ: Mathematics; Secondary Educ: Foreign Languages; Secondary Educ: Social Studies; Physical Education; Music Education; Secondary Educ: Art; Special Education).

Credit Only Granted for: EDCI425 or TLPL476.

Formerly: EDCI425.

TLPL477 Teaching Academically, Culturally, and Linguistically Diverse Students in Middle School and Secondary Education (2 Credits)

Instruction on methods of teaching academically, culturally, and linguistically diverse students in middle school and secondary classrooms.

Restriction: Must be in the teacher education program; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: TLPL488B or TLPL477.

Formerly: TLPL488B.

TLPL478 Professional Seminar in Education (1-3 Credits)

Seminar on the issues and problems teacher candidates encounter in classrooms. Exploration of the skills and strategies that best address these challenges.

Restriction: Must be in a major within the EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 4 credits.

Formerly: EDCI488.

TLPL479 Field Experiences in Education (1-4 Credits)

Field experiences in approved education setting with appropriate supervision. Credit not to be granted for experience accrued prior to registration. Open only to students admitted to approved teacher education programs.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 2 credits.

Formerly: EDCI489.

TLPL481 Embracing Diversity in the Classroom Community (3 Credits)

An exploration of the richness and complexity of student diversity that teacher candidates will encounter in K-12 classrooms. Students will engage in critical reflection around diversity and equity issues.

Restriction: Admission to teacher education program; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: TLPL481 or EDCI475.

Formerly: EDCI475.

TLPL488 Special Topics in Education (1-3 Credits)

Special and intensive treatment of current topics and issues in teaching, learning, policy and leadership.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDPS488 or TLPL488.

Formerly: EDPS488.

TLPL489 Internship in Education (1-12 Credits)

Internship or residency experiences in school settings with appropriate supervision. Credit not to be granted for experience accrued prior to registration. Open only to students admitted to approved teacher education programs.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 12 credits.

Credit Only Granted for: EDPS489 or TLPL489.

Formerly: EDPS489.

TLPL498 Special Problems in Education (1-3 Credits)

Exploration of current problems in teaching, learning, policy and leadership. Available only to students who have definite plans for study of approved problems.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDPS498 or TLPL498.

Formerly: EDPS498.

TLPL499 Workshops, Clinics, and Institutes (1-6 Credits)

The following type of educational enterprise may be scheduled under this course heading: Workshops conducted by the College of Education (or developed cooperatively with other colleges and universities) and not otherwise covered in the present course listing; clinical experiences in pupil-testing centers, reading clinics, speech therapy laboratories, and special education centers; institutes developed around specific topics or problems and intended for designated groups such as school superintendents, principals, and supervisors.

Credit Only Granted for: EDPS499 or TLPL499.

Formerly: EDPS499.

TLPL600 Teaching and Learning with Technology (3 Credits)

Provides a concrete, hands-on introduction to teaching and learning with technology. We will explore digital technology and its impact on learning and institutions. We will consider big ideas of the field as well as specific types of learning technologies and pedagogies for use in K-12 classrooms. We will discuss K-12 teaching methods that address the interdisciplinary nature of technology integration. The course will draw on class discussions, inquiry, instructional technology, and collaborative lab-based activities and prepare you to merge technology with your current teaching practice. Assessment with and of technology will also be explored.

Credit Only Granted for: EDCI687 or TLPL600.

Formerly: EDCI687.

TLPL602 Foundations of Technology in Education (3 Credits)

Provides a big-picture survey of technology in education and lays the groundwork for future coursework on the role of technology in education. This course will tackle both theoretical and practical dimensions of technology in education. After completing this course, students will have an understanding of the potential for the uses of technology for teaching and learning, identify the different roles technology can play and be ready for a hands-on introduction to specific topics/tools/pedagogies related to teaching and learning with technology.

TLPL603 Data-driven Decision Making in Schools and Classrooms (3 Credits)

Equips educators to use the data that surrounds them productively. This includes data students generate that can be used to improve student learning outcomes as well as data generated by the classroom and school that can be used to improve pedagogy and classroom culture. After completing this course, students will be better able to collect, analyze, and make decisions based on the data generated by their students and peers.

TLPL604 Teaching Science and Social Studies through Environmental Study (3 Credits)

Curriculum and instruction for science and social studies within a multicultural and environmental context; analysis of social studies and science curriculum materials; utilization of school and community resources.

Restriction: Must be in a major within the EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI695 or TLPL604.

Formerly: EDCI695.

TLPL605 Social, Cultural & Ethical Dimensions of Teaching and Learning with Technology (3 Credits)

Situates technology in the classroom within a larger social and cultural context. Along with exploring social opportunities afforded by technology, this course will cover important cultural and ethical dimensions of technology, including equity, inclusion, access, and questions of privacy and digital citizenship (for both teachers and students). After completing this course, students will be prepared to bring technology into their classrooms in responsible and safe ways while being able to take advantage of the new forms of interaction, instruction, and communication made possible through technology.

TLPL606 Teaching and Learning Mathematics in Secondary Schools (3 Credits)

Objectives, selection and organization of subject matter, appropriate methods, lesson plans, textbooks, technology and other instructional materials; assessment of student learning and other topics pertinent to secondary mathematics education. Internship or other placement in a secondary mathematics classroom is required.

Prerequisite: Enrollment in a University of Maryland program leading to teacher certification; and bachelor's degree in mathematics or related field; and 2 semesters of calculus.

Credit Only Granted for: EDCI651 or TLPL606.

Formerly: EDCI651.

TLPL607 Teaching and Learning Mathematics in the Elementary School (3 Credits)

Strategies and methodologies for the teaching of elementary school mathematics based on current research and theories about how children learn mathematics. Attention is given to professional recommendations and teaching practices that foster communication, reasoning, and reflection in the mathematics classroom. Internship or other placement in an elementary school is required.

Prerequisite: MATH212, MATH213, or MATH214; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: EDCI652 or TLPL607.

Formerly: EDCI652.

TLPL610 Trends in Mathematics Education (3 Credits)

Recent developments in educational thinking and practice which have affected the curriculum in mathematics.

Credit Only Granted for: EDCI650 or TLPL610.

Formerly: EDCI650.

TLPL611 Teaching and Learning Number in the Middle Grades (3 Credits)

Students develop reflective, theoretical perspectives toward and practical approaches for the teaching and learning of the number system in middle school. There is an emphasis on rational numbers and its pedagogical content knowledge.

Restriction: Admission to M.A or M.Ed. w/ concentration in Mathematics Education; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI683 or TLPL611.

Formerly: EDCI683.

TLPL612 Teaching and Learning Algebra in the Middle School (3 Credits)

Designed to enhance middle school mathematics teachers' content and pedagogical knowledge in algebra.

Prerequisite: Admission to M.A. or M.Ed. with concentration in Mathematics Education; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI655 or TLPL612.

Formerly: EDCI655.

TLPL613 Problem-Solving and Innovative Thinking in the Mathematics Classroom (3 Credits)

Curriculum and instruction for developing thinking skills through the discipline of mathematics. This is a hybrid course designed to blend on-campus class meetings with online experiences.

Prerequisite: Experience teaching mathematics K-12. And TLPL312; or TLPL413; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: EDCI653 or TLPL613.

Formerly: EDCI653.

TLPL614 Assessing Mathematical Understanding (3 Credits)

Techniques of assessing k-12 students' understanding of mathematics - including standardized tests, but focusing on alternative forms such as individual interviews, writing tasks, performance tasks, portfolios. Mathematics assessment viewed as an ongoing part of instruction.

Prerequisite: TLPL610; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI654 or TLPL614.

Formerly: EDCI654.

TLPL615 Teaching and Learning Geometry in the Middle Grades (3 Credits)

Designed to enhance both the pedagogical and geometric content knowledge of middle school mathematics teachers.

Prerequisite: Admission to M.A. or M.Ed. with concentration in Mathematics Education; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI645 or TLPL615.

Formerly: EDCI645.

TLPL616 Teaching and Learning Statistics in the Middle School (3 Credits)

Designed to enhance both the pedagogical and statistical/data analysis content knowledge of middle school mathematics teachers.

Prerequisite: Admission to M.Ed. or M.A. program in EDCI with concentration in Mathematical Education.

Credit Only Granted for: EDCI656 or TLPL616.

Formerly: EDCI656.

TLPL617 Understanding and Engaging Students' Conceptions of Mathematics (3 Credits)

Research related to K-14 students' common errors in and (mis)understandings of mathematics. Instructional strategies useful in building on errors and changing students' conceptions.

Prerequisite: Experience in teaching math; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI657 or TLPL617.

Formerly: EDCI657.

TLPL618 Digital Learning Tools and Communities (1 Credit)

Addresses the student learning outcomes outlined by the Interstate Teacher Assessment and Support Consortium (INTASC). When this course is successfully completed, students will be able to competently integrate technology into instruction to support student learning and develop research-based strategies for instructional and school improvement. Students are expected to demonstrate proficiency in each of the seven Maryland Teacher Technology Standards as well as the International Society for Technology Educator Standards.

Restriction: Must be in a Master of Education Teacher Certification Program.

Repeatable to: 3 credits.

TLPL620 Trends in School Curriculum: Science (3 Credits)

Recent developments in educational thinking and practice on the curriculum in science education.

Credit Only Granted for: EDCI670 or TLPL620.

Formerly: EDCI670.

TLPL621 Learning and Teaching in the Physical Sciences I (3 Credits)

Engagement in laboratory and inquiry-based methods to develop coherent understandings about the physical world and explore issues in the physical sciences. Personal engagements with phenomena and reflection on the learning and instructional experiences.

Restriction: Enrollment in an EDCI Outreach Program in science education; or must be in Curriculum and Instruction (Master's) program; or permission of instructor.

Credit Only Granted for: EDCI604 or TLPL621.

Formerly: EDCI604.

TLPL623 Learning and Teaching Biological Sciences (3 Credits)

Engagement in laboratory and inquiry-based methods to develop coherent understandings about the natural world and explore issues learning in biology. Personal engagement with phenomena and reflection on the learning and instructional experiences.

Restriction: Enrollment in an EDCI Outreach Program in science education; or must be in Curriculum and Instruction (Master's) program; or permission of instructor.

Credit Only Granted for: EDCI606 or TLPL623.

Formerly: EDCI606.

TLPL625 Teaching Science in Elementary Schools (3 Credits)

Identification of problems in teaching science. Methods for improving the effectiveness of science education.

Credit Only Granted for: EDCI671 or TLPL625.

Formerly: EDCI671.

TLPL626 Learning to Teach and Learn Science (3 Credits)

Developing practices of instruction in science teaching in the context of understanding student science learning.

Prerequisite: TLPL420; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Restriction: Must be in the Maryland Master's Certification program; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI675 or TLPL626.

Formerly: EDCI675.

TLPL627 Reflection and Practice in Secondary School Science Teaching (3 Credits)

Use of classroom videotape and student work as data for teachers to analyze their students' thinking and discuss instructional interpretation, strategies, and techniques in the specific contexts of their classes.

Prerequisite: TLPL626; or permission of instructor.

Restriction: Must be in the Maryland Master's Certification program.

Credit Only Granted for: EDCI676 or TLPL627.

Formerly: EDCI676.

TLPL630 Trends in Art Education Curriculum (3 Credits)

Recent developments in art education.

Credit Only Granted for: EDCI600 or TLPL630.

Formerly: EDCI600.

TLPL631 Historical Foundations of the Arts in Education (3 Credits)

An investigation into major historical events and underlying beliefs, values and practices that influence contemporary arts education (visual art, drama, dance, music) at all levels of instruction. Selected literature that focuses on cultural contexts, individuals, institutions, events and national and international perspectives is used to investigate changing conceptions and practices of arts education.

Credit Only Granted for: EDCI601 or TLPL631.

Formerly: EDCI601.

TLPL632 Understanding and Teaching Aesthetics (3 Credits)

Critical investigation of art, and curriculum implications.

Credit Only Granted for: EDCI602 or TLPL632.

Formerly: EDCI602.

TLPL633 Integrated Art Methods (3 Credits)

Builds upon the pedagogical foundation of an initial art education methods course and provides future art teachers with the means for developing PreK-12 art lesson/unit plans for a balanced qualitative art program for today's diverse and inclusive schools/classrooms. Integrating art with other subject areas.

Prerequisite: EDCI680; or TLPL435.

Restriction: Must be in a major within the EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI423, EDCI603, TLPL447 or TLPL633.

Formerly: EDCI603.

TLPL634 Teaching Language Arts in Elementary Schools (3 Credits)

Analysis of current issues, trends, and problems in language-arts instruction.

Credit Only Granted for: EDCI643 or TLPL634.

Formerly: EDCI643.

TLPL635 Coaching and Mentoring Teachers: Literacy Across Content Areas (3 Credits)

Provides knowledge on coaching and mentoring teachers in school district and school settings based on Standards for Middle and High School Literacy Coaches as well as current theory, research and best practice supporting the efficacy of literacy coaching. Emphasis on understanding reading process/strategy instruction; writing process/strategy instruction; and gathering and interpreting valid and reliable assessment data for creating district-wide and school-based literacy intervention plans.

Prerequisite: Enrolled in EDCI post-baccalaureate certificate Program in Literacy coaching.

Restriction: Must be in Curriculum and Instruction (Master's) program; and permission of instructor.

Credit Only Granted for: EDCI646 or TLPL635.

Formerly: EDCI646.

TLPL636 Trends in Secondary School Curriculum: English (3 Credits)

Recent developments in educational thinking and practice on the curriculum in English education.

Credit Only Granted for: EDCI640 or TLPL636.

Formerly: EDCI640.

TLPL637 Teaching for Equity in Bilingual/Dual Language Immersion Programs (3 Credits)

Focuses on how educators apply and reflect on teaching, learning and school practices aimed to achieve educational equity in dual language programs, including bilingual, two way, and one-way immersion K-12.

This course will include instruction, discussion, and materials in a LOTE (Language other than English) to model bilingual instruction.

TLPL640 Assessing, Diagnosing, and Teaching Writing (3 Credits)

Examines current theory, research, best practice, curricula and materials for teaching written communication in middle and secondary schools in order to survey, review and select formal and informal assessments and diagnostic strategies useful for writing teachers. Focuses on validity and reliability issues. Includes instructional planning and development of instructional materials for implementing appropriate individual, small-group and large-group instruction. English Language Learner (TESOL and SIOP) and special needs (inclusion) pupil issues considered.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI673 or TLPL640.

Formerly: EDCI673.

TLPL641 Reading, Cognition, and Instruction: Reading in the Content Areas I (3 Credits)

Provides middle and secondary education students with an understanding of the interactive nature of the reading process, the use of research-based instructional strategies, the relationship between vocabulary development and student concept development, the design of strategic reading instruction, the methods for assessing content area literacy, and the ability to plan instruction and communicate with students, parents, and allied professionals.

Credit Only Granted for: EDCI625 or TLPL641.

Formerly: EDCI625.

TLPL642 Processes and Acquisition of Writing (3 Credits)

Focuses on theory around the social nature of oral and written language. Specifically, reading like a writer (mentor texts, modeling, etc.), accountable talk (talk that supports writing discussion, question posing, etc.), and feedback (peer review, editing, writing for an audience, community of writers, etc.). Through these three focus areas, the teaching and assessment practices of 21st-century multimodal literacies will be addressed.

Restriction: For Master's Certification Students only; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI626 or TLPL642.

Formerly: EDCI626.

TLPL643 Assessing Student Learning and Development (3 Credits)

Prepares experienced teachers to assess student knowledge, strategies and skills over time so that they can design instruction that builds on student strengths and addresses student needs. Teachers will study the purposes of assessment including school and student needs.

Teachers will study the purposes of assessment including school and teacher accountability, student placement, course grade assignment and instructional design. They also will explore types of formal and informal assessment, curriculum-based and curriculum-free assessment, external and teacher made assessment.

Credit Only Granted for: EDCI612 or TLPL643.

Formerly: EDCI612.

TLPL644 Foundations of Reading (3 Credits)

Broad and comprehensive overview of reading and literacy and factors that may influence effective reading practices such as instruction, classroom environment and individual differences. Focus on different knowledge domains and traditions of inquiry related to reading and reading instruction.

Prerequisite: EDCI362; or TLPL462; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: EDCI660 or TLPL644.

Formerly: EDCI660.

TLPL645 Content Area Reading (3 Credits)

Research-based strategies for improving reading to learn in the content areas (K-12).

Prerequisite: EDCI362; or TLPL462; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: EDCI661 or TLPL645.

Formerly: EDCI661.

TLPL646 Linguistics in Education (3 Credits)

Provides teachers and educational researchers with the theoretical and technical knowledge of linguistics necessary to engage effectively in their fields.

TLPL647 Diagnostic Reading Assessment and Instruction (3 Credits)

Prepares individuals to be proficient, classroom-based assessors of student literacy learning and development by examining literacy assessment theory, materials, and procedures and the use of assessment to inform instruction.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI662 or TLPL647.

Formerly: EDCI662.

TLPL651 Leadership in Schoolwide Reading Program (3 Credits)

Preparation of reading personnel to function as resource persons to classroom teachers, administrators and the school community.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI666 or TLPL651.

Formerly: EDCI666.

TLPL652 Multicultural Materials and Instruction for P-12 Readers (3 Credits)

An exploration of the multicultural materials and instructional strategies that create responsive P-12 classrooms and curricula for diverse readers.

Credit Only Granted for: TLPL652 or EDCI667.

Formerly: EDCI667.

TLPL653 Clinical Assessment in Reading (3 Credits)

Clinical diagnostic techniques and materials for assessing reading strengths and needs.

Prerequisite: TLPL645 and TLPL650; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI664 or TLPL653.

Formerly: EDCI664.

TLPL654 Clinical Instruction in Reading (3 Credits)

Clinical procedures and materials for reading instruction.

Prerequisite: TLPL653; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI665 or TLPL654.

Formerly: EDCI665.

TLPL655 Assessment and Language Education (3 Credits)

Participants view current school-based assessments through varied models of assessment focusing on how schools measure language and achievement for multilingual learners (also known as English Language Learners, English Learners). Participants will identify the purpose, instrument, method, and the use of assessments and evaluations most appropriate and valid for multilingual students.

Credit Only Granted for: EDCI631 or TLPL655.

Formerly: EDCI631.

TLPL656 Teaching Culturally and Linguistically Diverse Exceptional Learners (3 Credits)

Explores cross-cultural and linguistic diversity as they relate to identification procedures for and education of English learners with exceptional needs beyond the second language acquisition process such as learning disabilities and gifted & talented.

Credit Only Granted for: EDCI632 or TLPL656.

Formerly: EDCI632.

TLPL657 Cross-Cultural Communication and Multilingual Learners (3 Credits)

Participants will research and critically reflect upon aspects of culture as a basis to understand students and to develop principles to guide culturally inclusive teaching decisions. Participants will better understand the role of culture and language in schooling in order to create classrooms where culturally and linguistically diverse students (also known as English Language Learners, English Learners) can succeed.

Credit Only Granted for: EDCI633 or TLPL657.

Formerly: EDCI633.

TLPL660 Foundations of Literacy and Biliteracy Development (3 Credits)

An overview of the research on literacy and biliteracy development for English learners. Specifically, the course explores the theoretical models and processes of teaching reading and writing, current literacy/biliteracy issues, assessment, and strategies for developing literacy and biliteracy skills for English learners.

Prerequisite: TLPL665.

Credit Only Granted for: EDCI636 or TLPL660.

Formerly: EDCI636.

TLPL661 Multiliteracies: Theory and Practice (3 Credits)

Explores the theoretical constructs and practical manifestations of multiliteracies in communities and schools by presenting an overview of the research on the constructs of New Literacy Studies, Critical Literacy, Digital Literacy, and Funds of Knowledge, as well as the practical implications of teaching reading and writing to culturally and linguistically diverse learners in content areas (i.e., language arts, math, science, social studies, etc.) in classrooms.

Prerequisite: TLPL665.

Credit Only Granted for: EDCI638, EDCI688J, or TLPL661.

Formerly: EDCI638 and EDCI688J.

TLPL662 Second Language Acquisition (3 Credits)

Major theoretical approaches to second language acquisition. For teaching English to speakers of other languages (TESOL).

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI732 or TLPL662.

Formerly: EDCI732.

TLPL663 Practice and Theory in Teaching Second Language Learners (3 Credits)

Focuses on issues that arise while teaching second language (ESOL or foreign language) learners. Supports implementation of theory into practice and research-based best practices during teaching internship, and completion of teaching portfolio during a second field experience.

Corequisite: EDCI637 or EDCI689; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI613 or TLPL663.

Formerly: EDCI613.

TLPL664 Foundations of Second Language Education: Legal, Social and Historical Trends and Issues (3 Credits)

Knowledge of history, research, current practice and public policy issues in the field of second language education from kindergarten to post-secondary settings. Required for TESOL certification program.

Credit Only Granted for: EDCI630 or TLPL664.

Formerly: EDCI630.

TLPL665 Methods for Teaching Multilingual Learners (3 Credits)

Draws on current research to present methods of teaching English to speakers of other languages and challenges participants to analyze and apply successful classroom practices that address the needs of culturally and linguistically diverse learners (also known as English Language Learners, English Learners).

Credit Only Granted for: EDCI634 or TLPL665.

Formerly: EDCI634.

TLPL666 English Grammar for Teachers of English to Speakers of Other Languages (3 Credits)

English grammar and methods of teaching grammar for graduate, prospective and current teachers of English to speakers of other languages. Analysis of the major grammatical structures of American English. Discussion of the role of teaching grammar, and effective classroom methods and techniques for the English as a second/foreign language classroom.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI635 or TLPL666.

Formerly: EDCI635.

TLPL667 Teaching Multilingual Learners- Culturally Sustaining & Translanguaging Practices in Literacy Classrooms (3 Credits)

Focuses on methods and materials for teaching reading and literacy to English learners/multilingual learners in various instructional settings.

TLPL668 Developing a Professional Portfolio (1-3 Credits)

Students will examine issues of performance assessment and develop professional portfolios following the guidelines established by the National Board of Professional Teaching Standards. Drawing on the research data collected throughout their program and relying on inquiry, reflections, and analysis, they will synthesize and present the body of their teaching experience.

Repeatable to: 3 credits.

Credit Only Granted for: EDCI614, EDCI619 or TLPL668.

Formerly: EDCI614.

TLPL670 Economics of Education (3 Credits)

An introduction to the application of economic principles to the study of education policy. The course content revolves around issues of efficiency, equity, and freedom of choice. Specific attention is devoted to school finance litigation and reform, practices for raising and allocating resources, and education productivity issues.

Credit Only Granted for: EDPS615 or TLPL670.

Formerly: EDPS615.

TLPL671 Education Policy Analysis (3 Credits)

Policy making in education from planning to evaluation with emphasis on the identification of policy problems and the resources available to analysts through multi-disciplinary approaches. An introductory experience with education policy analysis.

Credit Only Granted for: EDPS620 or TLPL671.

Formerly: EDPS620.

TLPL673 Federal Education Policy (3 Credits)

Federal involvement in education in the United States from 1780 to the present, emphasizing the effects of legislation, court decisions, agencies, and presidential initiatives on the distribution of education opportunities.

Credit Only Granted for: TLPL673 or EDPS625.

Formerly: EDPS625.

TLPL674 Studying Student Learning in Diverse Settings (3 Credits)

This course deepens teacher understanding of student development and th cultural context for teaching through readings and focused field studies. Participants will also begin developing skills needed for investigations using methods of interpretive inquiry.

Credit Only Granted for: EDCI611 or TLPL674.

Formerly: EDCI611.

TLPL675 Embracing Diversity in Classroom Communities (3 Credits)

The course aims to help students understand race, class, gender, and sexuality as systems of privilege, exclusion, marginalization, and the centrality of embracing diversity in the classroom communities to promote the success of all students.

Credit Only Granted for: EDCI697 or TLPL675.

Formerly: EDCI697.

TLPL676 Teaching as a Profession (3 Credits)

The profession of teaching and the knowledge base that defines teaching. Current and social issues that affect teaching and learning; role of research and experience in learning to teach.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI690 or TLPL676.

Formerly: EDCI690.

TLPL677 Reframing Teacher Professionalism: Achieving Teacher Leadership (3 Credits)

Understanding the profession of teaching, teacher leadership, and the knowledge base that undergirds the teaching profession. Multiple perspectives on teaching in the current debate on school reform and how they are aligned across the political spectrum.

Credit Only Granted for: EDCI682 or TLPL677.

Formerly: EDCI682.

TLPL678 Professional Seminar in Education (1-3 Credits)

Seminar on the issues and problems teacher candidates encounter in classrooms. Exploration of the skills and strategies that best address these challenges.

Prerequisite: Admission to a masters certification program in EDCI.

Corequisite: Participation in an arranged school placement.

Credit Only Granted for: EDCI618 or TLPL678.

Formerly: EDCI618.

TLPL679 Field Experiences in Education (1-3 Credits)

Field experiences in approved educational setting with appropriate supervision. Credit not to be granted for experience accrued prior to registration. Open only to students admitted to approved teacher education programs.

Repeatable to: 3 credits if content differs.

Formerly: EDPS689.

TLPL680 Foundations of Education (3 Credits)

An examination of the history and impact of US schools, with emphasis on how schools could achieve the promise of a high-quality, world-class education for the students they serve.

Credit Only Granted for: TLPL688B or TLPL680.

Formerly: TLPL688B.

TLPL681 History of Education in the United States (3 Credits)

A study of the origins and development of education in the United States, emphasizing the variety of interpretive and methodological concerns that define the field.

Credit Only Granted for: TLPL681 or EDPS611.

Formerly: EDPS611.

TLPL682 Philosophy of Education (3 Credits)

A study of the great educational philosophers and systems of thought affecting the development of modern education, with particular emphasis on recent scholarship on philosophical problems in education.

Credit Only Granted for: EDPS612 or TLPL682.

Formerly: EDPS612.

TLPL683 Sociology of Education (3 Credits)

This seminar examines major theoretical frameworks and perspectives of the sociology of education with an emphasis on k-12 education.

The course also takes a pragmatic approach by applying theoretical knowledge to understand U.S. schooling and contemporary educational themes and debates where activists, researchers, and political actors aim to alter schools, students, or families.

Credit Only Granted for: TLPL683 or EDPS613.

Formerly: EDPS613.

TLPL684 Trends in Secondary School Curriculum: Social Studies (3 Credits)

Recent developments in educational thinking and practice on the curriculum in social studies.

Credit Only Granted for: EDCI620 or TLPL684.

Formerly: EDCI620.

TLPL685 Teaching Social Studies in Elementary Schools (3 Credits)

Examination of current literature and research in the social sciences as they relate to social studies curriculum and instruction.

Credit Only Granted for: EDCI622 or TLPL685.

Formerly: EDCI622.

TLPL686 Curriculum, Teaching and Assessment in Social Studies (3 Credits)

Focuses on five key issues on social studies education: defining learning goals, building units with aligned goals, assessments, and instructional activities, designing inquiry-based lessons, assessing student learning, and modifying instruction based on assessment data.

Prerequisite: TLPL470; or EDCI680.

Credit Only Granted for: EDCI627 or TLPL686.

Formerly: EDCI627.

TLPL687 Politics of Education (3 Credits)

Educational institutions as political entities. Focuses on conceptual perspectives for examining political dynamics in governmental and organizational contexts. Provides opportunities to carry out original case studies of policy making processes at various levels of the education policy system.

Credit Only Granted for: EDPS614 or TLPL687.

Formerly: EDPL614.

TLPL688 Special Topics in Education (1-3 Credits)

Special treatment of current topics and issues in teaching, learning, policy and leadership.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Formerly: EDCI688.

TLPL689 Internship in Education (1-12 Credits)

Internship or residency experiences in school settings with appropriate supervision. Credit not to be granted for experience accrued prior to registration. Open only to students admitted to approved teacher education programs.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 12 credits if content differs.

Credit Only Granted for: EDCI689 or TLPL689.

Formerly: EDCI689.

TLPL690 Critical Literacies, Digital Technology & Instruction for Diverse Classrooms (3 Credits)

Focuses on issues related to critical literacy, digital technology, and literacy instruction, including the impact of media and various technologies on teachers and students.

TLPL691 Research Methods (3 Credits)

The interpretation and conduct of research relevant to curriculum, teaching and learning.

Credit Only Granted for: EDCI685 or TLPL691.

Formerly: EDCI685.

TLPL692 Statistical Literacy for Education Research (3 Credits)

Students will learn about descriptive (measures of central tendencies and dispersion) and inferential (bivariate and OLS regression) statistics with education applications. Throughout the course, students will learn critical basic statistical concepts, and statistics' language and how to interpret results and communicate research findings, both orally and in written form. Students will also explore various statistical techniques and read research articles to better understand statistical procedures and approaches.

Credit Only Granted for: TLPL788C, EDPS788I or TLPL692.

Formerly: TLPL788C.

TLPL693 Principles of Curriculum Development (3 Credits)

Curriculum planning, improvement, and evaluation in the schools; principles for the selection and organization of the content and learning experiences; ways of working in classroom and school on curriculum improvement.

Credit Only Granted for: EDPS635 or TLPL693.

Formerly: EDPS635.

TLPL694 Embracing Diversity: Critical Foundations of Schooling and Education (3 Credits)

Introduces teacher candidates to critical, sociocultural foundations of U.S. schooling, education, and society. Teacher candidates interrogate what it means to be an anti-racist, social justice-oriented educator in a pluralistic classroom.

TLPL695 Methods I: World Language Methods and Technology (3 Credits)

The first of two sequential courses required for achieving competence in teaching a world language. Explores Dual Language/World Language Methods and Second Language/Bilingual development. Implications for teaching and initial lesson design are explored through on-campus seminars as well as guided field experiences. Students should reserve a regular half-day per week for the field experience in local schools.

Credit Only Granted for: TLPL445 or TLPL695.

Additional Information: Lab and field experiences required.

TLPL696 Advanced World Language Methods and Technology (3 Credits)

Teaches advanced best practices for effective World Language instruction. Topics include: lesson planning, using authentic assessment and materials, applying national and state standards infusing culture, interdisciplinary content and technology. Classroom management procedures and strategies to create a welcoming and engaging classroom environment. Motivating students and differentiated instruction.

Prerequisite: TLPL695; and TLPL695.

Corequisite: Must be concurrently enrolled in TLPL479J.

Credit Only Granted for: EDCI433, EDCI688A, TLPL450 or TLPL696.

Formerly: EDCI688A.

TLPL697 Embracing Diversity: Supporting Culturally and Linguistically Diverse Learners in the Secondary Classrooms (3 Credits)

Explores language variation across a wide range of social, economic, regional and ethnic groups. It is designed to help teacher candidates increase their awareness of language differences and to enhance their effectiveness when teaching in culturally and linguistically diverse secondary classrooms.

Credit Only Granted for: TLPL688G or TLPL697.

Formerly: TLPL688G.

TLPL698 Conducting Research on Teaching (1-3 Credits)

Analysis and improvement of educational practice. Research methods used in the study of classroom teaching. Design and conduct of an action research project. Open only to students admitted to approved teacher education programs.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 3 credits if content differs.

Formerly: EDCI698.

TLPL699 Master's Seminar (3 Credits)

Directed study for master's degree students writing seminar papers.

Credit Only Granted for: EDPS679 or TLPL699.

Formerly: EDPS679.

TLPL700 Theory and Research in Computer Education (3 Credits)

Examination of the current research and theory in the instructional uses of computers, instructional tutoring systems, computer programing environments, computer-based laboratories and problem solving environments in educational settings.

Prerequisite: TLPL600, EDMS645, and TLPL691; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI783 or TLPL700.

Formerly: EDCI783.

TLPL701 Computers in Science Education (3 Credits)

Current and projected methods by which computers can augment classroom and laboratory-based science instruction in school and non-school settings.

Prerequisite: Must have completed EDCI487; or students who have taken courses with comparable content may contact the department.

Credit Only Granted for: EDCI677 or TLPL701.

Formerly: EDCI677.

TLPL702 Theories of Learning and Leadership with Technology (3 Credits)

Exploration of the impact technology has on how people learn, and how people use technology effectively to facilitate learning. Discussion of theories of designing technology for effective teaching and learning, and examinations of the challenges of implementing technology in education systems.

Credit Only Granted for: EDCI788Q or TLPL702.

Formerly: EDCI788Q.

Additional Information: Priority will be given to students in the Technology Learning and Leadership specialization.

TLPL703 Research on Technology in Education (3 Credits)

Students explore the research methodologies used by those doing research with and on learning technologies, focusing on cultural, experimental, design and learning analytic approaches. Emphasis will be on asking meaningful research questions related to technology and exploring methodological and analytical approaches for answering them. This course will also explore research methods that examine the efficacy of new technologies, research about technology, design methods.

Credit Only Granted for: EDCI788Q or TLPL703.

Formerly: EDCI788Q.

Additional Information: Priority will be given to students in the Technology Learning and Leadership specialization.

TLPL704 Research Methodologies and Educational Practice (3 Credits)

Introduction to methodological approaches commonly used in educational research with a focus on addressing issues in teaching and learning, schools and communities, and educational policy.

Restriction: Must be in Teaching and Learning, Policy and Leadership Master of Arts program; or permission of instructor.

Credit Only Granted for: TLPL788W or TLPL704.

Formerly: TLPL788W.

TLPL708 Special Topics in Technology, Learning & Leadership (1-3 Credits)

Read, plan, conduct, and report on research projects and research topics related to Technology, Learning & Leadership. Projects may be faculty/student projects, or group or individual student projects (may or may not be related to a dissertation). Emphasis on framing researchable questions and designing/analyzing research studies. Faculty and peer feedback and interaction are crucial expectations.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: EDCI758, TLPL728 or TLPL708.

Formerly: EDCI758, TLPL728.

TLPL710 Theory and Research on Mathematical and Scientific Thinking and Learning (3 Credits)

Study of mathematical and scientific thinking by students at various levels of schooling considered from the perspective of those classic and contemporary theories of learning that are particularly relevant to the study of mathematics and science. Exploration of what it means to understand mathematics and science.

Prerequisite: Admitted to Doctoral Program in Mathematics Education or Science Education; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI751 or TLPL710.

Formerly: EDCI751.

TLPL711 Foundations of Mathematics Education II: Theory and Research on Mathematics Teaching (3 Credits)

Knowledge of and insights into how mathematics has been and is being taught; theories about how it might be taught. Familiarity with the methods used to do research on teaching and to improve teaching.

Prerequisite: TLPL710; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI752 or TLPL711.

Formerly: EDC752.

TLPL712 Foundations of Mathematics Education III: Curriculum (3 Credits)

The study of curriculum in mathematics and research on curriculum. The relationship of mathematics and school mathematics; the forms, purposes, development, and evaluation of mathematics curricula.

Prerequisite: Admitted to Mathematics Education Doctoral Program; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI753 or TLPL712.

Formerly: EDCI753.

TLPL713 Mathematics and Science Education Policy, Professional Development and Teacher Preparation (3 Credits)

Preservice teacher education, professional development, and policy as agents of reform in mathematics education and in science education.

Prerequisite: Admitted to Doctoral Program in Mathematics Education or Science Education; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI754 or TLPL713.

Formerly: EDCI754.

TLPL720 Foundations of Science Education (3 Credits)

Development of science education pre-kindergarten through college; the influences on current and future practices; and the identification and critical analysis of topics in science education.

Prerequisite: TLPL620 or TLPL625; or permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDCI770 or TLPL720.

Formerly: EDCI770.

TLPL728 Research Seminar in Mathematics and Science Education (1 Credit)

Read, plan, conduct, and report on research projects and research topics in mathematics and science education. Projects may be faculty/student projects, or group or individual student projects (may or may not be related to a dissertation). Emphasis on framing researchable questions and designing/analyzing research studies. Faculty and peer feedback and interaction are crucial expectations.

Prerequisite: Admission to Doctoral Program in Mathematics or Science Education; and must have completed or be concurrently enrolled in TLPL710 or TLPL713.

Repeatable to: 9 credits if content differs.

Credit Only Granted for: EDCI758 or TLPL728.

Formerly: EDCI758.

TLPL730 Theory and Research in English Education (3 Credits)

A survey of the research literature; evaluation of research techniques; consideration of relevant instructional curriculum theory; evaluation of modern teaching methods and techniques.

Credit Only Granted for: EDCI740 or TLPL730.

Formerly: EDCI740.

TLPL731 Theory and Research in Written Communication (3 Credits)

Analysis and synthesis of recent theoretical trends in writing research; the reading and critiquing of representative research studies. The study of research methods for conducting disciplined inquiry in written communication.

Recommended: TLPL691.

Credit Only Granted for: EDCI745 or TLPL731.

Formerly: EDCI745.

TLPL732 Writing Across the Curriculum (3 Credits)

Emphasis on providing secondary education majors with an interdisciplinary foundation in current theory, research, and best practice focused on the teaching of writing across the curriculum, e.g., art, English, foreign languages and TESOL, language arts, mathematics, music, sciences, and social studies. Exceptional student, inclusion, and diversity issues will be discussed.

Credit Only Granted for: EDCI764 or TLPL732.

Formerly: EDCI764.

TLPL733 Advanced Clinical Practices in Reading Assessment (3 Credits)

Clinical practicum in assessment focusing on strengths and needs in reading. Case report writing and conferences.

Prerequisite: TLPL654.

Corequisite: TLPL734.

Credit Only Granted for: EDCI761 or TLPL733.

Formerly: EDCI761.

TLPL734 Advanced Clinical Practices in Reading Instruction (3 Credits)

Clinical practicum in instruction focusing on instructional techniques and diagnostic teaching.

Prerequisite: TLPL654.

Corequisite: TLPL733.

Credit Only Granted for: EDCI762 or TLPL734.

Formerly: EDCI762.

TLPL738 Theory and Research in Reading (3 Credits)

Survey of the literature in reading and allied fields, and an examination of current research trends and methodologies.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 6 credits if content differs.

Formerly: EDCI769.

TLPL740 Language and Education (3 Credits)

Dialect, language varieties in school settings; historical and current perspectives on the role of language in learning; theories of school achievement and consequences for language assessment.

Credit Only Granted for: EDCI730 or TLPL740.

Formerly: EDCI730.

TLPL743 Teaching Multilingual Learners: Current and Future Research Directions in Applied Linguistics and Language Education (3 Credits)

Examines the research base on teacher education through an equity-oriented lens, asking the larger question: How can we prepare teachers of multilingual learners to engage in humanizing and asset-oriented pedagogies? It also explores opportunities for future research in teacher education.

Credit Only Granted for: EDCI734 or TLPL743.

Formerly: EDCI734.

TLPL744 Research Centering Multilingual Learners: Sociocultural Approaches to Applied Linguistics in Education (3 Credits)

Critically examine research relevant to multilingual students, bilingual education, and theories of second language acquisition and multilingual development. Students will apply sociocultural perspectives to understand educational contexts and practices that can lead to greater educational equity for culturally and linguistically diverse students.

TLPL745 Classroom Inquiry Toward Teacher Professional Development (2 Credits)

Emphasizes current research and best practice on teacher inquiry as a mode of professional development. Participants will work within a teacher-coaching model to create a professional development presentation on writing and classroom writing instruction.

TLPL760 College Teaching (3 Credits)

Critical review of literature on teaching in higher education from conceptual and practical viewpoints. Designed for current and prospective adult educators. Focused on research and improvement of instruction.

Credit Only Granted for: EDPS757 or TLPL760.

Formerly: EDPS757.

TLPL761 History of Curriculum Theory and Development (3 Credits)

The writings of major educators in curriculum. Conceptual and formal similarities and differences between current curriculum projects and historical antecedents. Survey of curriculum materials for classroom use in their relationship to the curriculum theory of their time.

Prerequisite: TLPL693.

Restriction: Permission of EDUC-Education Policy and Leadership department.

Credit Only Granted for: EDPS732 or TLPL761.

Formerly: EDPS732.

TLPL762 Phenomenological Inquiry I (3 Credits)

Philosophic grounding for phenomenological inquiry at a beginning level. Guided writing practice in doing phenomenological inquiry is provided on a selected lived experience phenomenon.

Credit Only Granted for: EDPS735 or TLPL762.

Formerly: EDPS735.

TLPL763 Phenomenological Inquiry II (3 Credits)

This advanced course in phenomenological methodology provides an expanded philosophic and methodological grounding for conducting phenomenological research. Attention is given to the development of phenomenological projects through the process of phenomenological writing. It is especially relevant for persons interested in the study of lived meanings in the domains of education, psychology, counseling, the health sciences and related academic and professional fields.

Prerequisite: TLPL762.

Credit Only Granted for: EDPS736 or TLPL763.

Formerly: EDPS736.

TLPL764 Data Management and Coding in Stata (1 Credit)

School districts and states are required to collect large swaths of data on students, teachers, and schools. These large administrative datasets have become the backbone of education policy research, and so students interested in engaging in this space increasingly need the skills to work with "big data." This course will help students learn a coding language from the program Stata in order to clean and analyze large datasets. Topics covered include: data cleaning, recoding and checking; merging data from multiple sources; reshaping data; documenting processes; writing programs and macros to reduce errors; and presenting descriptive data through tables and graphs.

Recommended: Some prior experience with data management and statistical programming software (namely Stata) and with applied statistics.

Credit Only Granted for: TLPL788D or TLPL764.

Formerly: TLPL788D.

TLPL765 Quantitative Applications for Education Policy Analysis (3 Credits)

Students use quantitative applications and secondary datasets to investigate social problems and education policies. Emphasis on the use of quasi-experimental designs and regression techniques to frame education issues, analyze, and recommend policies.

Prerequisite: EDMS645; or students who have taken courses with comparable content may contact the department.

Recommended: EDMS646; or EDMS651. Or EDMS646; and EDMS651.

Credit Only Granted for: EDPS703 or TLPL765.

Formerly: EDPS703.

TLPL766 Impact Evaluation for Education and Public Policy (3 Credits)

Students will learn about and practice using a variety of quantitative research methods that allow for causal inferences and can be applied to estimate the impact of policies or programs in education and other policy sectors.

Prerequisite: Knowledge of multivariate regression and prior experience with statistical programming software (e.g., Stata). TLPL765 or permission from instructor.

Credit Only Granted for: TLPL766, TLPL672, or EDPS621.

Formerly: TLPL672.

TLPL767 Law, Equity, and Diversity in Education (3 Credits)

An examination of 'dilemmas of difference' on selected issues that arise at the intersection of law and education policy. Dilemmas and value conflicts imbedded in modern federal and state case law dealing with race, gender, sexual orientation, religion and disability.

Credit Only Granted for: TLPL767 or EDPS751.

Formerly: EDPS751.

TLPL770 Black and Latino Education: History and Policy (3 Credits)

Examination of the historical legacies and contemporary policies that have contributed to the educational status (K-20) of Blacks and Latinos in the United States from the 19th century to the present. Issues surrounding language, immigration, racism, social class, and state and federal policies will also be analyzed.

Recommended: EDCI776; and completion of EDSP611 recommended.

Credit Only Granted for: EDCI786 or TLPL770.

Formerly: EDCI786.

TLPL771 Pedagogy of Teacher Education (3 Credits)

Illuminates and challenges the somewhat implicit pedagogies of teacher education that have existed over time, and aims to develop a more overt knowledge of where the field is, and should be, as we engage in the opportunities and challenges of teaching and teacher education in our current era. To do so, we examine teacher education as racialized, linguicized, and gendered, and as situated in larger political and power-laden contexts.

Restriction: Permission of department.

Credit Only Granted for: EDCI780 or TLPL771.

Formerly: EDCI780.

TLPL772 Teaching, Professional Development and School Change (3 Credits)

Examines current scholarship on professional development for K-12 teachers, characteristics of good professional development, and its relationship to teaching, learning, and school improvement.

Credit Only Granted for: EDCI784 or TLPL772.

Formerly: EDCI784.

TLPL773 Theory and Research in Social Studies Education (3 Credits)

A survey of the research literature; evaluation of research techniques; consideration of relevant instructional curriculum theory; evaluation of modern teaching methods and techniques.

Prerequisite: TLPL684; or TLPL685.

Credit Only Granted for: EDCI720 or TLPL773.

Formerly: EDCI720.

TLPL774 Urban Education (3 Credits)

This seminar provides students with a broad overview of urban education as a field of inquiry by examining the social context of urban schools, how transformative pedagogy is practiced and conceptualized as well as school reform.

Credit Only Granted for: EDCI776 or TLPL774.

Formerly: EDCI776.

TLPL775 Power, Privilege, Diversity and Teaching (3 Credits)

This course critically examines the theoretic foundation of multicultural education with particular emphasis on the relationship between power, privilege, diversity and teaching.

Credit Only Granted for: EDCI782 or TLPL775.

Formerly: EDCI782.

TLPL776 Race and Whiteness in Education (3 Credits)

This course asks: what is whiteness, white supremacy, and white privilege, and how do they function in U.S. educational systems? Students interrogate white onto-epistemologies and white settler-colonial logics; social constructions (and reconstructions) of race and whiteness; and institutional, structural, and systemic racism via research, teaching, policies, and practice.

Credit Only Granted for: TLPL776 or TLPL788U.

Formerly: TLPL788U.

TLPL777 Critical Race Theory in Education (3 Credits)

This course asks: what is the function of racism, and how do we work toward a more racially just education system, if racism is permanent? Students learn tenets of Critical Race Theory and related frameworks (e.g., BlackCrit, AsianCrit, UndocuCrit, LatCrit, TribalCrit) and engage in counterstorytelling to amplify the experiences of Black, Indigenous, Latine, Asian, and other non-Black people of Color.

Recommended: TLPL776.

Credit Only Granted for: TLPL777 or TLPL788G.

Formerly: TLPL788G.

TLPL778 Scholarly Thought and Contemporary Curriculum (1-3 Credits)

Current curricular trends, issues, theory, and research in the light of past curricular and social thought.

Restriction: Permission of EDUC-Human Development and Quantitative Methodology department.

Repeatable to: 6 credits.

Formerly: EDPS738.

TLPL780 Contested Control: School Choice, Localism, and Centralization (3 Credits)

Taking the local school district as its field of inquiry, this course will examine a series of common, seemingly unobjectionable terms—"democracy," "markets," "choice," "public," "private," etc.—each of which represents very different visions of school governance and political organization. Readings will explore the nature of social justice, efficacy, and civic participation within school districts, and will do so not merely through a lens of power but of authority in the sense of moral legitimacy. Ultimately, the readings return to one simple question: Who should control the schools? Through its examination of school district governance, this course will prepare students for work in local and state policy. It will also approach issues from a variety of ideological perspectives and bolster students' knowledge of historical, philosophical, and political approaches to education.

Credit Only Granted for: TLPL788X or TLPL780.

Formerly: TLPL788X.

TLPL781 Policy and Politics of Education Reform (3 Credits)

Examines enduring issues embedded in the recurrent efforts to reform US public schools, such as: How do we achieve the "elusive ideal" of equitable educational opportunity for all students? How might we structure public school systems and develop their capacity to meet the multiple academic, social, economic, political, and cultural responsibilities governments assign to them? Under what conditions might market-based initiatives be a viable reform option? What sorts of education and social policies may be required to improve the learning experiences and life chances of children and youth in the US? This course provides opportunities to analyze prominent approaches to education reform (e.g. altering governance arrangements, expanding access and opportunity, improving instruction, instituting standards-based high stakes accountability systems, expanding school choice, privatizing the management and delivery of educational programs, linking school reform to more comprehensive social services and safety nets). It also provides opportunities to analyze the political forces that give rise to various genres of education reform proposals.

Credit Only Granted for: TLPL788F, PLCY732 or TLPL781.

Formerly: TLPL788F.

TLPL783 Critical Ethnographic Research Methods (3 Credits)

This course asks: why are you the person to study and tell the story of a community? Through critical ethnographic research methods and methodologies, students are invited to be self-reflexive and interrogate what it means to learn from, engage with, and tell stories about marginalized communities in racial/social justice research.

Credit Only Granted for: TLPL788B or TLPL783.

Formerly: TLPL788B.

TLPL786 School Finance and Business Administration (3 Credits)

Introduction to principles and practices in the administration of the public school finance activity. Sources of tax revenue, the budget, and the function of finance in the educational program are considered.

Credit Only Granted for: EDPS676 or TLPL786.

Formerly: EDPS676.

TLPL788 Special Topics in Education (1-3 Credits)

Special and intensive treatment of current topics and issues in teaching, learning, policy and leadership.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Repeatable to: 6 credits.

TLPL789 Internship in Education (1-3 Credits)

Approved professional experiences with appropriate supervision. Open only to students admitted to approved master's and doctoral specializations.

Repeatable to: 3 credits if content differs.

Credit Only Granted for: EDPS789 or TLPL789.

Formerly: EDPS789.

TLPL790 Seminar in Mixed Methods Research in Education (3 Credits)

Examination of epistemological and methodological issues involved in conducting mixed methods studies in education. Students design and conduct analyses using existing datasets that include qualitative and quantitative data. They formulate appropriate research questions, consider alternative mixed methods designs, and address methodological complexities associated with working with qualitative and quantitative data in a single study.

Prerequisite: EDMS646; and (EDCI791 or EDHI700); and permission of EDUC-Teaching and Learning, Policy and Leadership department.

Recommended: EDCI792.

Credit Only Granted for: EDCI775 or TLPL790.

Formerly: EDCI775.

TLPL791 Qualitative Research I: Design and Fieldwork (3 Credits)

Examines the theoretical and epistemological moorings of different types of qualitative research. Students apply selected field research methods to problems of professional practice in schools and communities while considering central issues and dilemmas that arise while engaging in fieldwork.

Prerequisite: EDCI790.

Credit Only Granted for: EDCI791 or TLPL791.

Formerly: EDCI791.

TLPL792 Qualitative Research II: Analysis and Interpretation of Data (3 Credits)

Considers methods of on-going data analysis, ways of knowing and writing about field research, issues of reflexivity, and the ethical and political decisions involved in crafting text. Students read literature on and exemplars of multiple modes of qualitative data analysis and interpretation.

Prerequisite: TLPL791.

Credit Only Granted for: TLPL792 or EDCI792.

Formerly: EDCI792.

TLPL793 Methods of Discourse Analysis (3 Credits)

Surveys the various theoretical and methodological frameworks for doing discourse analytic investigations across disciplines.

Credit Only Granted for: EDCI788B or TLPL793.

Formerly: EDCI788B.

TLPL794 Foundations of Educational Research I (3 Credits)

An introduction to the "contested terrain" of education research. It examines major conceptual, methodological and political issues embedded in efforts to carry out education research and focuses on the development of the analytic dispositions and communication skills required to carry out research that meets the variously defined quality, utility and significance standards of scholarship in the field.

Restriction: Must be in Teaching and Learning, Policy and Leadership (Doctoral) program.

Credit Only Granted for: EDPS788P or TLPL794.

Formerly: EDPS788P.

TLPL795 Foundations of Educational Research II (3 Credits)

Students engage in the process of conceptualizing and completing a rigorous review of a section of literature in their area of specialization.

Restriction: Must be in Teaching and Learning, Policy and Leadership (Doctoral) program.

Credit Only Granted for: EDPS788T or TLPL795.

Formerly: EDPS788T.

TLPL798 Special Problems in Education (1-6 Credits)

Exploration of current problems in teaching, learning, policy and leadership. Available only to master's or doctoral candidates under the direction of their advisors.

Formerly: EDPL798.

TLPL799 Master's Thesis Research (1-6 Credits)

Formerly: EDPS799.

TLPL820 Seminar in Science Education (3 Credits)

Credit Only Granted for: EDCI870 or TLPL820.

Formerly: EDCI870.

TLPL828 Seminar in Mathematics Education (1-3 Credits)

Survey and analysis of literature on an identified research topic in mathematics education. Design and implementation of a research study to investigate the identified topic.

Repeatable to: 6 credits.

Credit Only Granted for: EDCI858 or TLPL828.

Formerly: EDCI858.

TLPL830 Seminar in English Education (3 Credits)

Credit Only Granted for: EDCI840 or TLPL830.

Formerly: EDCI840.

TLPL840 Seminar in Reading Education (3 Credits)

Credit Only Granted for: EDCI860 or TLPL840.

Formerly: EDCI860.

TLPL841 Research Methods in Reading (3 Credits)

Current research questions and methods culminating in a study suitable for submission to journals. Emphasis on using and conducting research.

Credit Only Granted for: EDCI861 or TLPL841.

Formerly: EDCI861.

TLPL860 Seminar on Case Study Methods (3 Credits)

Conceived as both an analysis of case study methods and a laboratory for applying course content to research topics or projects of interest to students, it addresses a range of conceptual, methodological, ethical, political, and logistical issues embedded in efforts to conduct thoughtful, "disciplined" case study research. Since this focuses on case study research, it may be particularly helpful to students who are exploring various approaches to research or who are contemplating using case study methods in their theses and/or dissertations.

Credit Only Granted for: EDPS730 or TLPL860.

Formerly: EDPS730.

TLPL861 Seminar in Social Studies Education (3 Credits)

Credit Only Granted for: EDCI820 or TLPL861.

Formerly: EDCI820.

TLPL862 Race, Class, and Social Justice: A Policy Seminar in Curriculum Theory and Development (3 Credits)

An advanced seminar focusing upon critical analyses of the themes, concepts, and language relevant to Curriculum Theory, Policy, and Research. Focus on education policy issues relating to race, class, and social justice with special reference to patterns of economic and cultural distribution, their impact upon persons at society's margins and on specific curricular responses to injustice.

Prerequisite: TLPL693.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDPS837 or TLPL862.

Formerly: EDPS837.

TLPL888 Apprenticeship in Education (1-8 Credits)

Apprentice practice under professional supervision in an area of competence compatible with the student's professional goals. Credit not to be granted for experience accrued prior to registration. Open only to degree- and certificate-seeking graduate students.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDPS888 or TLPL888.

Formerly: EDPS888.

TLPL889 Internship in Education (3-8 Credits)

Internship experiences at a professional level of competence in a particular role with appropriate supervision. Credit not to be granted for experience accrued prior to registration. Open only to students advanced to candidacy for doctoral degree.

Restriction: Permission of EDUC-Teaching and Learning, Policy and Leadership department.

Credit Only Granted for: EDPS889 or TLPL889.

Formerly: EDPS889.

TLPL898 Pre-Candidacy Research (1-8 Credits)

Credit Only Granted for: EDPS898 or TLPL898.

Formerly: EDPS898.

TLPL899 Doctoral Dissertation Research (1-8 Credits)

Registration required to the extent of 6-9 hours for an Ed.D. Project and 12-18 hours for a Ph.D. Dissertation.

Formerly: EDPS899.

TLTC - Teaching and Learning Transformation Center

TLTC499 Independent Study in Teaching and Learning (1-3 Credits)

Earn academic credit for the time spent supporting TLTC's educational development programs and/or engaging in the scholarship of teaching and learning.

Restriction: Permission of TLTC required - enrollment restriction.

Repeatable to: 6 credits.

TLTC699 Special Topics in University Teaching and Learning (1-3 Credits)

Special topics seminars for graduate students interested in university teaching and learning.

Restriction: Permission of TLTC-Teaching and Learning Transformation Center.

Repeatable to: 6 credits if content differs.

TLTC708 Independent Study: Learning Analytics Research Group (1-3 Credits)

A graduate level group research course designed to support independent study of learning analytics at the University of Maryland.

Restriction: Permission of instructor.

Repeatable to: 6 credits if content differs.

TLTC798 University Teaching and Learning (1-2 Credits)

Special topic courses directed at experienced graduate teaching assistants who are interested in university teaching and learning issues. Can be used by students for participation in the University Teaching and Learning Program.

Restriction: Permission of TLTC-Teaching and Learning Transformation Center.

Repeatable to: 6 credits if content differs.

Formerly: UNIV798.

TOXI - Toxicology

TOXI609 Methods in Toxicology (1-3 Credits)

Provides the opportunity for graduate students to become familiar with laboratory methods used by the staff to study the effect of toxins and environmental pollutants on living systems. Permission and credit arranged individually.

Restriction: Permission of CMNS-Chemical & Life Sciences department.

Repeatable to: 6 credits.

TOXI799 Masters Thesis Research (1-6 Credits)

Restriction: Permission of SPHL-Maryland Institute for Applied Environmental Health.

TOXI898 Pre-Candidacy Research (1-8 Credits)**TOXI899 Doctoral Dissertation Research (1-8 Credits)**

Restriction: Permission of SPHL-Maryland Institute for Applied Environmental Health.

UMEI - Maryland English Institute

UMEI001 English as a Foreign Language: Beginning (12 Credits)

Intensive course for the non-native speaker of English who has little or no previous knowledge of English. Focus on the rapid acquisition of the basic features of English grammar and pronunciation and on speaking and understanding American English; reading and writing appropriate to the level will be included. Special fee required for this course. This course does not carry credit towards any degree at the University and does not count in the retention plan.

Restriction: Permission of EDUC-Dean-Maryland English Institute department.

UMEI002 English as a Foreign Language: Intermediate I (12 Credits)

Intensive course for the non-native speaker of English who has had some previous instruction in English. Emphasis on improving listening and speaking skills, on mastering intermediate grammatical structures, and on expanding vocabulary. Includes practice in reading and writing appropriate to the level. Special fee required for this course. This course does not carry credit towards any degree at the University and does not count in the retention plan.

Restriction: Permission of EDUC-Dean-Maryland English Institute department.

UMEI003 English as a Foreign Language: Intermediate II (12 Credits)

Intensive course for the non-native speaker of English who has mastered the essential structures of English grammar. Emphasis on improving communicative skills for a wide range of linguistic situations, on rapid expansion of vocabulary, and on improving reading comprehension and basic writing skills. Special fee required for this course. This course does not carry credit towards any degree at the University and does not count in the retention plan.

Restriction: Permission of EDUC-Dean-Maryland English Institute department.

UMEI004 English as a Foreign Language: Intermediate III (12 Credits)

Intensive course for the non-native speaker of English who has a good command of the basic features of spoken and written English. Emphasis on refining speaking and listening skills, on improving reading speed and comprehension of academic texts, and on developing writing skills for academic courses. Special fee required for this course. This course does not carry credit towards any degree at the University and does not count in the retention plan.

Restriction: Permission of EDUC-Dean-Maryland English Institute department.

UMEI005 Advanced English as a Foreign Language (6 Credits)

Semi-intensive course for the nearly proficient non-native speaker of English needing additional language instruction prior to undertaking full-time academic study. Speaking and listening skills; improvement of reading speed and comprehension; and development of writing skills. Special fee required for this course. This course does not carry credit towards any degree at the University and does not count in the retention plan.

UMEI011 Integrated English: Elementary (5-10 Credits)

English as a Second Language course for students at the elementary level.

Prerequisite: Placement exam; and permission of EDUC-Dean-Maryland English Institute department.

UMEI012 Integrated English: Intermediate (5-10 Credits)

English as a Second Language course for students at the intermediate level.

Prerequisite: Placement exam; and permission of EDUC-Dean-Maryland English Institute department.

UMEI013 Integrated English: Advanced (5-10 Credits)

English as a Second Language for students at the advanced level.

Prerequisite: Placement exam; and permission of EDUC-Dean-Maryland English Institute department.

UMEI028 Special Topics in English as a Second Language (1-2 Credits)

Focuses on particular English language topics for ESL student as indicated by title. Course intended to be taken concurrently with UMEI011, UMEI012, or UMEI013; but may be taken independently with special permission.

Repeatable to: 18 credits if content differs.

UNIV - University Courses

UNIV798 Special Topics Colloquium on University Teaching and Learning (1-3 Credits)

Special topic courses directed at experienced graduate teaching assistants who are interested in university teaching and learning issues. Can be used by students for participation in the University Teaching and Learning Program.

Restriction: Permission of UGST-Undergraduate Studies.

Repeatable to: 6 credits if content differs.

URSP - Urban Studies and Planning

URSP600 Research Design and Application (3 Credits)

Techniques in urban research, policy analysis, and planning. Survey of descriptive and normative models. Objective and subjective measurements. Emphasis on assumptions of research.

Formerly: URSP602.

URSP601 Research Methods (3 Credits)

Use of measurement, statistics, quantitative analysis, and micro-computers in urban studies and planning.

Recommended: An undergraduate-level statistics course; and familiarity with Microsoft Excel.

Formerly: URBS601.

URSP603 Land Use Planning: Concepts and Techniques (3 Credits)

Land use concepts and definitions: legal context for planning; markets and planning; planning for housing; community services, employment, utilities, and transportation; zoning; subdivision regulations; growth management; plan implementation.

Credit Only Granted for: URSP603, URBS680, or URBS603.

Formerly: URBS603.

URSP604 The Planning Process (3 Credits)

Legal framework for U.S. planning; approaches to the planning process; tools and technology; systems thinking; defining problems and issues; soliciting goals and values; developing and making good presentations; public participation; developing and evaluating alternatives and scenarios; plan evaluation; developing RFPs.

Credit Only Granted for: URSP604, URBS656, or URBS604.

Formerly: URBS604.

URSP605 Planning History and Theory (3 Credits)

Examination of key, selected major events and issues in U.S. planning history and the development of the planning profession; exploration of major themes in planning theory and practical applications of them; and analysis of the relationship of history and theory.

URSP606 Planning Economics (3 Credits)

Resource allocation in a market economy, the nature of market failures, and the justifications for public sector intervention. The limits and possibilities for planning in a market economy.

Restriction: Must not have completed URSP630.

Credit Only Granted for: URSP606, URBS606, or URBS630.

Formerly: URBS606.

URSP631 Transportation and Land Use (3 Credits)

The interrelationship between transportation and land use. What are the impacts of various transportation modes on land use patterns, and how can land use solutions influence travel demand. The integration of transportation into master planning and site impact analysis. Using quantitative methods to understand the land use and transportation linkage.

URSP640 Growth Management and Environmental Planning (3 Credits)

Topics associated with growth management, defined as policies and strategies by which governments attempted to control the amount, location, pace, pattern and quality of development within their jurisdictions.

URSP661 City and Regional Economic Development Planning (3 Credits)

Spatial patterns of employment and populations, and models of urban and regional growth and decline. Focus on application of economic theory and urban planning techniques to issues of local economic development and planning.

Credit Only Granted for: URSP661, URBS440, or URBS661.

Formerly: URBS661.

URSP664 Real Estate Development for Planners (3 Credits)

Planning, Architectural and Public Policy students are introduced to the real estate development process primarily from the point of view of the private entrepreneurial developer. It will include the steps in undertaking a real estate development from the initial concept to the property management and final disposition, the basic financial and tax concepts underlying real estate development, a review of national housing policy, including public-private partnerships, and solving specific real estate development problems using financial spread-sheets.

Prerequisite: URSP606.

Credit Only Granted for: URSP664 or URSP688F.

Formerly: URSP688F.

URSP668 Recent Developments in Urban Studies (1-6 Credits)

Examination of selected current aspects of urban affairs and planning, including, for example, new cities and towns in the United States or neighborhood preservation in other countries. Location of course may be off-campus.

Repeatable to: 15 credits if content differs.

URSP671 Politics and Planning (3 Credits)

Examination of the practice of planning as a technical and a practice role. Attitudes of planners toward plan implementation. Development of effective roles for professional planners.

Formerly: URSP691.

URSP673 Community Development (3 Credits)

Examines and identifies planning approaches and methods that can help communities - particularly low income communities - become stronger, more cohesive, and more capable of serving their interests. Examines urban poverty; urban politics; history, concepts and practice of community development; and community development approaches and methods.

URSP688 Recent Developments in Urban Studies (2-6 Credits)

Examination of selected current aspects of urban affairs and planning, including, for example, <"new towns"> in the United States or neighborhood preservation in Russia. Location of course may be off-campus.

Formerly: URBS688.

URSP705 Summer Community Planning Studio I (4 Credits)

Intensive community planning group field work, typically five days a week for four weeks. Often outside the USA. Application of class work to actual planning and policy challenges. Students seeking to meet the URSP studio requirement must also take URSP 706.

Restriction: Permission of instructor.

URSP706 Summer Community Planning Studio II (2 Credits)

Intensive analysis and report-preparation of work completed in URSP 705. Held in College Park. Students seeking to meet the URSP studio requirement must also take URSP 705.

Restriction: Permission of instructor.

URSP708 Community Planning Studio (2-6 Credits)

The Community Planning Studio is a "capstone" course intended to provide students with an opportunity to apply their knowledge and skills to analyze current, pressing planning issues, in a selected community and to produce a report containing recommendations for addressing those issues. In essence, students act as a consulting team for a community client.

Prerequisite: URSP605, URSP604, URSP601, and URSP600; and permission of ARCH-Urban Studies & Planning Program department.

Repeatable to: 6 credits.

Credit Only Granted for: URSP704 or URSP708.

Formerly: URSP704.

URSP709 Field Instruction (3-6 Credits)

Students will satisfy a 300-hour internship (20 hours for 15 weeks during the spring, 25 hours a week for 12 weeks during the summer). Suitable internships are approved by the Internship Coordinator or Instructor; they involve a significant amount of planning work (preferably in the student's area of interest) and provide an appropriate on-site supervisor. The Internship Coordinator will assist students in finding a suitable internship, but the ultimate responsibility rests with each student. Whether the internship is paid or not is a matter to be worked out between the student and the organization.

Prerequisite: URSP605, URSP604, and URSP600; or permission of ARCH-Urban Studies & Planning Program department.

Repeatable to: 6 credits.

Credit Only Granted for: URSP703 or URSP709.

Formerly: URSP703.

URSP710 Research Seminar: Urban Theory and Issues (3 Credits)

An advanced research seminar for M.A. and M.C.P. students preparing their final research projects.

Prerequisite: 15 credits in URSP courses.

Restriction: Must be in Urban and Regional Planning and Design (Doctoral) program.

Formerly: URBS710.

URSP788 Independent Study in Urban Studies and Planning (1-3 Credits)

Directed research and study of selected aspects of urban affairs.

Repeatable to: 6 credits if content differs.

Formerly: URBS788.

URSP798 Readings in Urban Studies and Planning (1-3 Credits)

Directed readings in selected aspects of urban affairs and planning.

Repeatable to: 6 credits if content differs.

Formerly: URBS798.

URSP799 Master's Thesis Research (1-6 Credits)

Formerly: URBS799.

URSP804 Advanced Planning Theory (3 Credits)

Relations between theory and practice in planning. Ways of developing and using knowledge in collective action. Challenges to organizing for planning, finding knowledge useful for planning and balancing social attachments with free inquiry.

URSP805 Seminar in Research Design (3 Credits)

Addresses fundamental aspects of research design for Ph.D students in urban planning and policy-related fields. Topics include principles of research design, formulating a feasible hypothesis and identifying appropriate methodology for testing hypotheses eg. qualitative methods, quantitative methods, survey research. Writing of proposals and dissertation. Publication, presentation, and funding.

Prerequisite: URSP804 and URSP810.

URSP810 Contemporary Metropolitan Issues (3 Credits)

Introduces Ph.D. students to current metropolitan issues. Focus is on the historical development of the issue, problem definition, methodological approaches to its study, methodological dilemmas, and the ways that different conclusions are translated into policy. Topics vary from semester to semester but include such topics as the spatial mismatch hypothesis, the impact of urban design and form on travel behavior, the impact of technology on urban form, the justification for historic preservation, and sustainable development.

Restriction: Must be in Urban and Regional Planning and Design (Doctoral) program.

URSP898 Pre-Candidacy Research (1-8 Credits)

Selected topics in Urban Studies and Planning. Topics will vary with the instructor.

Repeatable to: 6 credits if content differs.

URSP899 Doctoral Dissertation Research (1-8 Credits)

This course is a required course for the Ph.D program in Urban and Regional Planning and Design.

USLT - Latina/o Studies

USLT401 Latinas/os and US Popular Culture (3 Credits)

An examination of the relationship between Latinas/os and popular culture in the United States. Using theoretical lenses drawn from cultural studies, visual culture studies, critical race theory, borderlands theory, and feminism, the course analyzes multiple texts from time frames past and present. Explores issues such as exclusion from and inclusion within US identity, transnational identifications and cultural flows, ethnoracial stereotyping and resistance to it, and intersections of Latina/o identity with aspects of class, race, sexuality, and gender. Investigates art, TV, music, cinema, and everyday lived experience.

Credit Only Granted for: USLT401, USLT498B, or AMST498M.

Formerly: USLT498B.

USLT403 Citizens, Refugees, and Immigrants (3 Credits)

Citizenship, Refugee and Immigrant are guiding categories that often define the Latina/o community in the United States. Employing this analytical lens, this course critically engages with notions of exclusion and inclusion, which included documentation, status, race, gender, and power. To better understand how these ideas and processes work, students are introduced to the history of Latina/o migration, US immigration policies, racial formation theory, gender construction, borderland theory, and the politics of territoriality.

Credit Only Granted for: USLT403, USLT498I, AMST498N, or IMMR419D.

Formerly: USLT498I.

USLT420 U.S. Latinas/os on the Silver Screen: The Silent Era to the Present Day. (3 Credits)

Combining media theory and film history, this course considers the film industry's relationship to Latinidad, examining issues such as the shift from silent film to sound, the impact made on Latina/o images by the Second World War, and Latinas/os in the Red Scare. The second half of the course turns its attention to self-representation by Latina/o filmmakers and empathetic images created by whites in and after the 1970s. Some of the questions that the course addresses include: How have Latinas/os been depicted in Hollywood history? How have inter-American foreign relations shaped the US Latina/o image? How have Latina/o filmmakers confronted issues such as racism and sexism in the United States?

Credit Only Granted for: USLT420, USLT498A or AMST498G.

Formerly: USLT498A.

USLT430 Globalization and the Diversifying U.S. (3 Credits)

While often talked about as a recent phenomenon and one focused on capital, the ebbs and flows of globalization has a long history among Latina/o communities in the United States. The impact and consequences of globalization can be seen in US foreign policy in Latin America. For instance, Operation Bootstrap in Puerto Rico and the Maquiladores on the Mexico and U.S. border. At the same time, it has shaped immigration policies and the social, political and cultural experiences of Latina/o workers in the U.S. Often blamed for "taking" jobs, this course takes a deeper look at the concrete reasons for the rise of globalism and its impact on Latina/o communities in the US.

Credit Only Granted for: USLT430, USLT498N, AMST498W, or IMMR419J.

Formerly: USLT498N.

USLT450 Central Americans and the United States: Culture, Politics, and Community (3 Credits)

With attention to history, memory, politics, and culture, this course examines the relationships, conflicts, and exchanges of people and power between the United States and the Central American isthmus. We will investigate the role of the US government and military, as well as US corporate interests and US-backed dictatorships, in the culture, politics, and economy of nations including El Salvador, Nicaragua, Guatemala, and Honduras. Through literature, feature films, documentary films, theatre, poetry, and other mediums, the class will analyze responses to this history in Central American cultural productions originating both from the isthmus and from Central Americans living in the United States.

In addition to US interventions in the Americas, the course will examine migration from Central America to North America and will conclude by exploring the lives and activities of Central Americans living in the USA.

Credit Only Granted for: AMST498C, USLT450 or USLT498D.

Formerly: USLT498D.

USLT460 Revolutions and Diasporas (3 Credits)

How have revolutions in Latin America influenced the history of US immigration, refugee, and asylum policies? How have they changed US history, culture, experience, geography, politics and the future? This course examines both the history of major revolutions in Latin America and their impact on Latinx diasporic and immigrant communities in the US. It investigates questions of slavery and freedom US expansionism, radical politics, Third World liberation movements, and the politics of asylum and US immigration policies. Students in the course will learn transnationalist, diasporic, borderlands and other forms of Latinx historical methods. In addition, the course will focus on race, class, gender, sexuality, and the politics of location.

Credit Only Granted for: USLT460, USLT498R, or AMST498B .

Formerly: USLT498R.

USLT480 Race and Nation in U.S. Cinema (3 Credits)

From the 1915 release of D.W. Griffith's *The Birth of a Nation* to the present, cinema has been a crucial medium through which cultural producers have advanced and contested concepts of ethnoracial and national identity in the US. This course adopts a historically-grounded practice of media criticism to understand the ideology and iconography of both Hollywood's studio system and independent cinema. The course requires students to examine film and identity through multiple, racial, methodological and theoretical lenses, including film history, and film and media theory. Focus will be the cinematic politics and poetics of racial exclusion and inclusion, empathy and disidentification, power and resistance, and the shaping of a national "imagined community." We will pursue how ideas about class, sexuality, gender, and disability have informed ideologies concerning race and nation. Classes will be divided between lecture, film viewings, and, most importantly, class discussions.

Credit Only Granted for: AMST498P, USLT480, or USLT498C.

Formerly: USLT498C.

USLT488 US Latina/o Senior Seminar (3 Credits)

A variable topics seminar that exposes students to interdisciplinary critical readings, writings, and research in U.S. Latina/o Studies. Interdisciplinary research methodologies are broadly addressed. Students will gain skills and practice in reading critical analytic texts and will develop writing skills.

Recommended: USLT202 or USLT201.

Restriction: Senior standing; and permission of instructor.

Repeatable to: 9 credits if content differs.

USLT498 US Latina/o Studies: Special Topics (3 Credits)

Specific content to be announced when courses are offered.

Prerequisite: USLT202 or USLT201.

Restriction: Junior standing or higher.

Repeatable to: 9 credits if content differs.

VMSC - Veterinary Medical Sciences

VMSC436 Animal Health Policy and Communication (3 Credits)

Intended for upper level students in Veterinary Medicine or Animal Science as well as other students who are interested in understanding how science and politics interact and influence animal health policy and how veterinarians and animal scientists can effectively communicate science to non-scientists such as legislators and policymakers.

Recommended: Completion of ANSC225 and ANSC340 recommend.

Cross-listed with: ANSC436.

Restriction: Must be in a major within the AGNR-Animal & Avian Sciences department; or permission of AGNR-VA-MD Regional COL Veterinary Med.

Credit Only Granted for: ANSC489A, ANSC436, or VMSC436.

Formerly: ANSC489A.

VMSC600 Infectious Disease Diagnosis and Interpretation (1 Credit)

A broad exposure to many different diagnostic techniques, the appropriate use of the tests, how they are to be interpreted and the possible consequences of the diagnosis.

VMSC610 Recombinant Viral Vectors (3 Credits)

A comprehensive presentation of information on the molecular biology of the most relevant viral vectors developed to date and give insight on vector construction, purification and utilization. Also intended for students in virology and related fields as well as to those interested in the application of viral vectors to basic research.

VMSC660 Emerging and Re-emerging Infectious Diseases (2 Credits)

The global burden of emerging and re-emerging infectious diseases is growing and prompts the need for effective control of these pathogens. The objective of this course is to provide graduate students with knowledge of pathogenesis and transmission of globally evolving pathogens. Registered students for this course are expected to know fundamentals of infectious diseases. References from the peer reviewed journals will be provided to facilitate understanding of the selected topics. Opening of this course is necessary to help graduate students to stay up-to-date with currently emerging pathogens and their evolution with changes in environment. This course is complementary to other existing microbiology courses (i.e., Viral Pathogenesis) on campus. Lectures focus on an in-depth analysis of a variety of topics in current infectious diseases. The course highlights recently published literatures to evaluate evolving trends in infectious diseases. The covered topics include subjects related with various pathogens and their adaptation strategy to enhance pathogenicity and transmissibility. The lectures will also cover the control and prevention measures of these pathogens.

VMSC670 Molecular Epidemiology of Infectious Diseases (2 Credits)

Molecular epidemiology is a discipline that uses molecular microbiology tools to study the distribution and determinants of diseases in human and animal populations. This course will provide a comprehensive overview and detailed discussion of the core molecular approaches and recent technological advances that are and can be used to investigate the etiology, transmission, and control of infectious diseases in veterinary medicine and public health. Theoretical and practical aspects of various molecular biology methods will be discussed in the context of epidemiological studies of infectious diseases including both bacterial and viral infections of veterinary and zoonotic significance. Lecture topics will cover the principles and application of various molecular techniques to problems of infectious diseases; population and evolutionary genetics of pathogenic microorganisms; data analysis and interpretation. Lecture materials will also be supported with practical data analysis, literature review discussions, which will be student-driven that will critique relevant manuscripts via group discussions in the classroom.

Prerequisite: Students planning to take this course are expected to have had some backgrounds in infectious diseases and molecular biology.

Cross-listed with: EPIB670.

VMSC688 Special Topics in Veterinary Medical Sciences (1-4 Credits)

Lectures and discussions on current topics in veterinary medicine s as animal disease surveillance, risk analysis, molecular epidemiolo or fish pathology. Targeted at veterinary medicine (DVM) students a other graduate students with a background in veterinary medical sciences.

Prerequisite: Permission of AGNR-Veterinary Medicine Program department.

Repeatable to: 8 credits.

VMSC689 Use of Genomics and Proteomics in Infectious Disease (3 Credits)

Focus is placed on current biotechnological development and recent research breakthroughs in the field of genomics and proteomics as it relates to infectious disease and drug/vaccine development.

Recommended: BCHM463; and (BSCI330 or BSCI230); or by permission.

Repeatable to: 6 credits if content differs.

VMSC698 One Health Seminar (1-3 Credits)

"One Health" is an approach that recognizes that health of people is closely connected to health of animals and our shared environment. Outstanding leaders in the field will present ideas for analysis and discussion among class members. Topics will include presentation and discussion of scientific publications, current topics, and new methodologies.

Prerequisite: Permission of AGNR-Veterinary Medicine Program department.

Repeatable to: 6 credits.

VMSC699 Special Problems in Veterinary Medical Sciences (1-4 Credits)

Independent study of a specific problem related to veterinary medicine such as a disease outbreak, application of a new diagnostic test or a risk analysis related to animal health. Targeted at veterinary medicine (DVM) students and other graduate students with a background in veterinary medicine.

Prerequisite: Permission of faculty mentor.

Repeatable to: 8 credits.

VMSC700 Animal Health Policy and Communication (3 Credits)

An introduction to animal health policy with emphasis on understanding how science and politics interact and influence animal health policy and how veterinarians and animal scientists can effectively communicate science to non-scientists such as legislators and policymakers.

Recommended: ANSC225 and ANSC340.

Restriction: Must be in a major in AGNR-VA-MD Regional Col Veterinary Med; or must be in a major within the AGNR-Animal & Avian Sciences department; or must be in a major in PUAJ-School of Public Policy; or permission of AGNR-VA-MD Regional Col Veterinary Med.

VMSC705 Genetics of Animal Viruses (2 Credits)

An advanced course that covers the structure and complexity of viral genomes, genome replication and expression, virus-host interactions, virus evolution, genetic principles and methodology applicable to animal viruses.

VMSC720 Viral Pathogenesis (2 Credits)

This course will teach graduate students about mechanisms of infections by animal and human viral pathogens, including virus-cell interactions, host responses, and consequences of virus infection. Particular attention will be focused on the molecular mechanisms of the interactions between virus and host.

VMSC758 Journal Club in Comparative Biomedical Sciences (1 Credit)

The Journal Club in Comparative Biomedical Sciences is a graduate-level student-driven course. Each student will pick a peer-reviewed journal article for individual presentation and group discussion. The articles will cover a wide variety of biomedical science topics based on student and group interests.

Repeatable to: 6 credits if content differs.

VMSC760 Immunology of Infectious Diseases (3 Credits)

An advanced graduate level course that focuses on the cutting-edge knowledge of immunity and recent research breakthroughs in the interactions between host immune system and infectious pathogen, and vaccine development

VMSC770 Advanced Topics in Immunology (2 Credits)

The objective of the course is to provide students with the advanced and cutting-edge knowledge and techniques of immunology as well as research advancement in important immunologic topics. A selection of immunology area will be specifically selected with emphasis on recent research breakthroughs in the field. Therefore, the topics will be different each academic year.

Prerequisite: VMSC760; or permission of instructor.

VMSC780 Parasites of Medical and Veterinary Importance (2 Credits)

Provides students with the basic knowledge of parasites as well as research advancement in important parasites of humans and animals. Particular attention will be given to parasite biology, pathogenesis, and host responses to parasitic infection. A selection of parasites of medical and veterinary importance will be specifically covered with emphasis on recent research breakthroughs in the field.

Restriction: Permission of instructor.

VMSC799 Thesis Research (1-6 Credits)

Repeatable to: 99 credits if content differs.

VMSC898 Pre-Candidacy Research (1-8 Credits)**VMSC899 Dissertation Research (1-8 Credits)**

Repeatable to: 99 credits if content differs.

WGSS - Women, Gender and Sexuality Studies

WGSS408 Literature by Women Before 1800 (3 Credits)

Selected writings by women in the medieval and early modern era.

Prerequisite: Must have completed two English courses in literature; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: ENGL408.

Repeatable to: 9 credits if content differs.

Formerly: WMST408.

WGSS410 Women of the African Diaspora (3 Credits)

Explores the lives, experiences, and cultures of women of Africa and the African diaspora—African-America, the Caribbean, and Afro-Latin America. A variety of resources and materials will be used providing a distinctive interdisciplinary perspective.

Credit Only Granted for: WMST410 or WGSS410.

Formerly: WMST410.

WGSS420 Asian American Women: The Social Construction of Gender (3 Credits)

Examines the intersection of gender, race and class as it relates to Asian American women in the United States; how institutionalized cultural and social statuses of gender, race, ethnicity and social class produce and reproduce inequality with implications for Asian Americans and the broader society.

Cross-listed with: AAST420.

Restriction: Must not have completed WMST420.

Credit Only Granted for: AAST420, WMST420 or WGSS420.

WGSS425 Gender Roles and Social Institutions (3 Credits)

Relationship between gender roles and the structure of one or more social institutions (e.g., the economy, the family, the political system, religion, education). The incorporation of gender roles into social institutions; perpetuation or transformation of sex roles by social institutions; how changing gender roles affect social institutions.

Credit Only Granted for: SOCY425, WMST425 or WGSS425.

Formerly: WMST425.

WGSS428 Topics in Women, Gender, and Sexuality Studies (1-3 Credits)

Thematic exploration of a topic in women, gender, and sexuality studies.

Repeatable to: 9 credits if content differs.

Formerly: WMST428.

WGSS444 Feminist Critical Theory (3 Credits)

Issues in contemporary feminist thought that have particular relevance to textual studies, such as theories of language, literature, culture, interpretation, and identity.

Prerequisite: WMST200, WGSS200, WMST250, WGSS250, or ENGL250.

Cross-listed with: ENGL444.

Credit Only Granted for: ENGL444, WMST444 or WGSS444.

Formerly: WMST444.

WGSS448 Literature by Women of Color (3 Credits)

Literature by women of color in the United States, Britain, and in colonial and post-colonial countries.

Prerequisite: Must complete two English courses in literature; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: ENGL448.

Repeatable to: 9 credits if content differs.

Formerly: WMST448.

WGSS452 Women in the Media (3 Credits)

Participation and portrayal of women in the mass media from colonial to contemporary times.

Cross-listed with: JOUR452.

Credit Only Granted for: JOUR452, WMST452 or WGSS452.

Formerly: WMST 452.

WGSS454 Women in Africa (3 Credits)

The place of women in African societies: the role and function of families; institutions such as marriage, birthing, and child rearing; ritual markers in women's lives; women in the workplace; women's associates; women's health issues; measures designed to control women's behavior; women and development.

Credit Only Granted for: HIST494, WMST454 or WGSS454.

Formerly: WMST454.

WGSS455 Women in Medieval Culture and Society (3 Credits)

Medieval women's identity and cultural roles: the condition, rank and rights of medieval women; their access to power; a study of women's writings and the constraints of social constructs upon the female authorial voice; and contemporary assumptions about women.

Cross-listed with: HIST495.

Credit Only Granted for: HIST495, WMST455 or WGSS455.

Formerly: WMST455.

WGSS456 Women and Society in the Middle East (3 Credits)

Examines the customs, values and institutions that have shaped women's experience in the Middle East in the past and in the contemporary Middle East.

Recommended: Prior coursework in Middle East studies or gender studies.

Cross-listed with: HIST492.

Credit Only Granted for: HIST492, WMST456 or WGSS456.

Formerly: WMST456.

WGSS457 Redefining Gender in the U.S., 1880-1935 (3 Credits)

Exploring changing perceptions of gender in the U.S., 1880-1935, and the impact of those changes on the day to day lives of men and women.

Credit Only Granted for: WGSS457 or WMST457.

Formerly: WMST457.

WGSS458 Literature by Women After 1800 (3 Credits)

Selected writings by women after 1800.

Prerequisite: Must have completed two English courses in literature; or permission of Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Cross-listed with: ENGL458.

Repeatable to: 9 credits if content differs.

Formerly: WMST458.

WGSS468 Feminist Cultural Studies (3 Credits)

Each version of this course focuses on one or several forms of popular culture -- such as TV, music, film, cyber-culture, or genre fiction (for example, science fiction) -- and demonstrates how feminists value, critique and explain such forms. Tools of feminist cultural studies include economic and social analyses of power, race, sexuality, gender, class, nationality, religion, technology, and globalization processes.

Repeatable to: 9 credits if content differs.

Formerly: WMST468.

WGSS469 Study Abroad Special Topics IV (1-6 Credits)

Special topics course taken as part of an approved study abroad program.

Repeatable to: 15 credits if content differs.

Formerly: WMST469.

WGSS471 Women's Health (3 Credits)

The women's health movement from the perspective of consumerism and feminism. The physician-patient relationship in the gynecological and other medical settings. The gynecological exam, gynecological problems, contraception, abortion, pregnancy, breast and cervical cancer and surgical procedures. Psychological aspects of gynecological concerns.

Cross-listed with: HLTH471.

Restriction: Must be in a program in the Harriet Tubman Department of Women, Gender, and Sexuality Studies; or must be in a major within SPHL-Behavioral & Community Health department.

Credit Only Granted for: HLTH471, WMST471, or WGSS471..

Formerly: WMST471.

WGSS486 Advanced Feminist, Critical Race, and Queer Theories (3 Credits)

Provides undergraduates with a survey of foundational texts in the intersecting fields of feminist, critical race, and queer studies, as well as an overview of current scholarship in order to give students an opportunity to understand the origins and the development of these fields. This course is especially recommended for students interested in pursuing graduate education. Our discussions will be focused on the trajectories of these intellectual conversations as they have developed in the academy.

Prerequisite: WMST301 or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

WGSS487 Advanced Research Seminar in Gender, Race, and Queer Studies (3 Credits)

A research seminar that allows students to focus their developed skills on a single topic of their own choosing while meeting regularly in seminar to discuss, critique, support, and learn from their peers' projects and assessments. Students choose a topic based on their own interests and prior coursework, perform advanced research appropriate to the question, and formulate an appropriate method of presentation of their research findings. The culminating presentation may take the form of a written paper or a creative, digital, or activist project.

Prerequisite: WMST300 or WGSS301; and WMST400 or WGSS302.

Credit Only Granted for: WMST487 or WGSS487.

Formerly: WMST487.

WGSS488 Senior Seminar (3 Credits)

Seminar for advanced majors in women's studies or other students with appropriate preparation. Interdisciplinary topics will vary each semester.

Restriction: Permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 9 credits if content differs.

Formerly: WMST488.

WGSS489 Individual Research in Gender, Race and Queer Studies (3 Credits)

Allows students who wish to continue the research they began in WMST487 or WGSS487 to do so under the guidance of an individual faculty mentor. Each student taking this class will develop an individual syllabus based on the project on which they are working, with the goal of developing a work of scholarship specific to their interests that can serve as an entry point for graduate study or professional work.

Prerequisite: WMST487 or WGSS487.

Repeatable to: 9 credits.

WGSS491 Judaism and the Construction of Gender (3 Credits)

The study of Jewish culture, religious practice, communal authority, and literature through the frame of such critical categories of analysis as gender, sexuality, masculinity, power, ethics, and the feminine.

Prerequisite: 1 course in JWST; or 1 course in LGBT; or 1 course in WMST or WGSS.

Cross-listed with: JWST491.

Credit Only Granted for: JWST491, WMST491 or WGSS491.

Formerly: WMST491.

WGSS492 Sex, Gender, and Jewish Identity (3 Credits)

An exploration of Jewish embodiment, including dynamics related to biological sex, culturally-framed gender, and sexuality. Topics of discussion may include transgender and intersex Jews, stereotypes and gender performance, modesty, genetics, and body alteration. Focus is on contemporary Jewish culture, framed within the larger historical and textual tradition.

Prerequisite: 1 course in WGSS; or 1 course in JWST; or 1 course in LGBT; or permission of instructor.

Cross-listed with: JWST492, LGBT448W.

Credit Only Granted for: JWST492, JWST409G, LGBT448W, WMST498W or WGSS492.

Formerly: WMST498W and JWST409G.

WGSS496 African-American Women Filmmakers (3 Credits)

Examines the cinematic artistry of African-American women filmmakers and the ways in which these films address the dual and inseparable roles of race and gender.

Credit Only Granted for: WMST496 or WGSS496.

Formerly: WMST496.

WGSS497 Professional Development (1 Credit)

To assist students in thinking about the next step post-undergraduate degree and to think long term about the importance of their WMST degree in lifelong career, personal, and political development. This course will provide students an opportunity to reflect upon where they are going beyond the B.A. and develop ways to communicate how their coursework and experiences at UMD have prepared them for the next step. The course will focus on the practicalities of resume writing, internship or job searches, etc. but also on the specific challenges/opportunities of translating interdisciplinary training to professional internship or beyond-the B.A. sites. Students may take this course in preparation for their internship (working to select an appropriate internship that can translate well to post-undergraduate aspirations) or they may take it post-internship as they determine their post-graduation steps.

Prerequisite: 12 credits in LGBT, WMST or WGSS courses.

Restriction: Must have completed a minimum of 75 credits.

Credit Only Granted for: WMST497 or WGSS497.

Formerly: WMST497.

WGSS498 Advanced Special Topics in Women, Gender, and Sexuality Studies (1-3 Credits)

Advanced study of a thematic topic in women, gender, and sexuality studies.

Restriction: Permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 9 credits if content differs.

Formerly: WMST498.

WGSS498D Sex, Gender, and Sexuality in the Islamic World (3 Credits)**WGSS499 Independent Study (1-3 Credits)**

Research and writing or specific readings on a topic selected by the student and supervised by a faculty member of the Women's Studies Department.

Prerequisite: 1 course in WMST or WGSS.

Restriction: Permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 9 credits if content differs.

Formerly: WMST499.

WGSS601 Theoretical Foundations in Women, Gender, and Sexuality Studies (3 Credits)

Examines fundamental concepts in the interdisciplinary field of Women, Gender, and Sexuality Studies. Engages intersectionality as a critical analytic and set of responses to structural power and domination. Provides students with a theoretical foundation for understanding gender, race, and sexuality as analytic categories operating in transnational and global contexts and intersecting with other categories of difference.

Prerequisite: WMST400 or WGSS302; or students who have taken courses with comparable content may contact the department.

Restriction: Must be in the Women, Gender and Sexuality Studies doctoral or graduate certificate program.

Credit Only Granted for: WMST601 or WGSS601.

Formerly: WMST601.

WGSS602 Methodologies and Epistemologies in Women, Gender, and Sexuality Studies (3 Credits)

Examines the politics and practice of knowledge production in the interdisciplinary field of Women, Gender, and Sexuality Studies. Explores how theory is connected to the formation of raced/gendered/sexed bodies, subjectivities, and existences that unsettle Eurocentric genealogies of disciplinary knowledge formation. Introduces students to methodological and epistemological frameworks for attending to the impact of relations of power and domination on how research and scholarship are created and defined within and across disciplinary boundaries, cultures, and paradigms.

Prerequisite: WMST400 or WGSS302; or permission of the Harriet Tubman Department of Women, Gender and Sexuality Studies.

Restriction: Must be in the Women, Gender and Sexuality Studies doctoral or graduate certificate programs.

Credit Only Granted for: WMST602 or WGSS602.

Formerly: WMST602.

WGSS618 Feminist Pedagogy (3 Credits)

Examines the higher education classroom from a feminist perspective through theory and analysis. Students are graduate teaching assistants with the Women's Studies department.

Restriction: Permission of ARHU-Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 9 credits.

Formerly: WMST618.

WGSS619 Women, Gender, and Sexuality Studies Teaching Practicum (1 Credit)

Provides WGSS graduate teaching assistants with ongoing regular faculty supervision during the semesters the students are teaching courses in the department.

Restriction: Must have permission of the Harriet Tubman Department of Women, Gender and Sexuality Studies; and must be a current WGSS teaching assistant.

Repeatable to: 8 credits if content differs.

Formerly: WMST619.

WGSS628 Women, Gender, and Sexuality Studies Colloquium (1 Credit)

An intensive advanced exploration of current problems and issues in women, gender, and sexuality studies.

Repeatable to: 12 credits if content differs.

Formerly: WMST628.

WGSS698 Special Topics in Women, Gender, and Sexuality Studies (1-3 Credits)

Advanced work in selected topics in Women, Gender, and Sexuality Studies

Prerequisite: WMST400 or WGSS302; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Restriction: Must be in the Women, Gender and Sexuality Studies doctoral or graduate certificate program; or permission of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 12 credits if content differs.

Formerly: WMST698.

WGSS699 Independent Study (1-3 Credits)

Research and writing on specific readings on a topic selected by the student which is approved and supervised by a faculty member of the Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Restriction: Permission of instructor.

Repeatable to: 9 credits.

Formerly: WMST699.

WGSS708 Research Seminar in Women, Gender, and Sexuality Studies (3 Credits)

Guides students through the process of developing a research article in Women, Gender, and Sexuality Studies from idea to completed draft, with a view to future publication. Students will work to build research skills and develop their individual projects within the structure, accountability, and collaboration of a seminar format. The work of the class will include arranging individual meetings with core and affiliate Harriet Tubman Department of Women, Gender, and Sexuality Studies faculty who can advise the student on their specific research area.

Restriction: Permission of instructor.

Repeatable to: 9 credits if content differs.

Formerly: WMST708.

WGSS709 Directed Independent Reading for Major Field Exam (1-6 Credits)

Directed reading in preparation for Major Field Exam. In consultation with their advisors, students identify, analyze, critique and synthesize material relevant to their major fields of inquiry. Grading will be based on combinations of oral performance in the bi-weekly meetings, production of annotated bibliographies and synthetic papers.

Restriction: Permission of Harriet Tubman Department of Women, Gender, and Sexuality Studies.

Repeatable to: 12 credits.

Formerly: WMST709.

WGSS799 Masters Thesis Research (1-6 Credits)

Master's Thesis Research

Repeatable to: 9 credits.

Formerly: WMST799.

WGSS898 Pre-Candidacy Research (1-8 Credits)

Pre-Candidacy Research

Repeatable to: 12 credits.

Formerly: WMST898.

WGSS899 Doctoral Dissertation Research (1-8 Credits)

Doctoral Dissertation Research

Repeatable to: 36 credits.

Formerly: WMST899 .

WMST - Women's Studies
